

Safety Standard Recognized, C700, Encapsulated, KJN Type, X1 440 VAC/Y1 250/400 VAC (Industrial Grade)

Overview

KEMET's C700, encapsulated radial leaded ceramic disc capacitors are specifically designed for interference-suppression AC line filtering applications. Having internationally recognized safety certifications, these capacitors are well-suited for applications that require keeping potentially disruptive or damaging line transients and EMI out of susceptible equipment. They are also an ideal solution when needing to suppress line disturbances at the source.

Safety Certified Capacitors are classified as either X and/or Y capacitors. Class X capacitors are primarily used in line-to-line (across-the-line) applications. In this application, there is no danger of electric shock to humans should the

capacitor fail, but could result in a risk of fire. The class Y capacitor is primarily used in line-to-ground (line by-pass) applications. In this application, failure of the capacitor could lead to danger of electric shock.

With a working voltage of 440 VAC in line-to-line (Class X) and 250/400 VAC in line-to-ground (Class Y) applications, these safety capacitors meet the impulse test criteria outlined in IEC Standard 60384. Meeting subclass X1 and Y1 requirements, these devices are certified to withstand impulses up to 4 KV (X1) and 8 KV (Y1) respectively. These encapsulated devices also meet the flame test requirements outlined in UL Standard 94 V-0.

Benefits

- Safety standard recognized (IEC 60384-14)
- Reliable operation up to 125°C
- Class X1 440 VAC/ Y1 250/400 VAC
- 10mm and 12.5 mm lead spacing
- Lead(Pb)-free and RoHS Compliant
- Halogen-free
- Capacitance offerings ranging from 8 pF – 4.7 nF
- Available capacitance tolerances of ±5%, ±10%, and ±20%
- High-reliability
- Preformed (crimped) or straight lead configurations
- Non-polar device, minimizing installation concerns
- 100% pure matte tin-plated lead finish, allowing for excellent solderability
- Encapsulation meets flammability standard UL 94 V-0

Applications

Typical applications include:

- Line-to-line (Class X) filtering
- Line-to-ground (Class Y) filtering
- Antenna coupling
- Primary and secondary coupling (switching power supplies)
- Line disturbances suppression (motors and motor controls, relays, switching power supplies and invertors)

¹ Capacitor body diameter will limit available lead spacing and packaging options. See "Dimensions" and "Product Ordering Codes and Ratings" sections of this document to determine availability.

² "Vertical Kink", "Outside Kink", and "Inside Kink" lead configurations cannot be combined with the bulk/25 mm lead length option (WL25).

25 mm lead length is only available on capacitors with straight leads (lead configuration ordering code "A"). For nonstandard lead length inquiries, please contact KEMET.

³ Bulk packaging lead length availability is dependent upon "Lead Configuration" and "Lead Spacing." See "Dimensions" section of this document to verify availability of a specific lead length option. For nonstandard lead length inquiries, please contact KEMET.

Packaging C-Spec Ordering Options Table

Packaging Type	Lead Length (mm) ^{2,3}	Packaging Ordering Code (C-Spec)
Reel	25 mm	7301
Ammo Pack ⁴	25 mm +1.5/-1.0 (straight leads) 18.0 +2.0/-0 (preformed leads ¹)	7317
Bulk Bag	3.5 ±1.0	WL35
	5.0 ±1.0	WL50
	10.0 ±1.0	WL10
	25.0 ±1.0	WL25

¹ Preformed (crimped) lead configurations include "Vertical Kink", "Outside Kink" and "Inside Kink". See "Lead Configurations" and "Ordering Information" sections of this document for further details.

² "Vertical Kink", "Outside Kink" and "Inside Kink" lead configurations cannot be combined with the bulk/25 mm lead length option (WL25). 25 mm lead length is only available on capacitors with straight leads (lead configuration ordering code "A"). For nonstandard lead length inquiries, please contact KEMET.

³ For nonstandard lead length inquiries, please contact KEMET.

⁴ Lead length for ammo pack packaging is defined by the H and H0 dimensions in Table 3.

Lead Configurations

All lead configurations are available on devices with lead spacing of 10 mm and 12.5 mm.

Dimensions – Millimeters

Lead Configuration	Lead Configuration Ordering Code ¹	S	Lead Spacing Tolerance	D	T	e	ØF
		Lead Spacing ²		Body Diameter ²	Body Thickness	Lead Meniscus	Lead Diameter
Straight	A	10, 12.5	±1.0	See Table 1 - "Product Ordering Codes and Ratings"		3.0 maximum	0.60 ±0.1
Vertical Kink (Preformed)	B						
Outside Kink (Preformed)	C						
Inside Kink (Preformed)	D						

¹ Lead Configuration is identified in the 13th character of the ordering code. See "Lead Configuration" and "Ordering Information" sections of this document for further details.

² Body diameter of capacitor will limit available lead spacing and packaging options. See "Product Ordering Codes and Ratings" sections of this document for further details.

Approval Standard and Certification No.

Safety Standard	Standard No.	Subclass	Working Voltage	Certificate No.
TUV	IEC 60384-14	X1	440 VAC	R50466900
		Y1	250 VAC	
TUV	IEC 60384-14	X1	440 VAC	R50466900
		Y1	400 VAC	
UL CAN/CSA	UL 60384-14 and E60384-14	X1	440 VAC	E356389
		Y1	250 VAC	
UL CAN/CSA	UL 60384-14 and E60384-14	X1	440 VAC	E356389
		Y1	400 VAC	

These devices are TUV and UL recognized for antenna coupling and AC line-to-line (Class X) and line-to-ground (Class Y) applications per IEC60384-14 and UL 60384-14.

Environmental Compliance

These devices are Halogen-free and RoHS Compliant. They meet all requirements set forth by both EU and China RoHS directives.

Table 2 – Performance & Reliability: Test Methods and Conditions

Item		Specification	Test Method																			
Operating Temperature Range			-25°C to +125°C																			
Dielectric Strength	Between lead wires	No failures	The capacitor shall not be damaged when 4,000 VAC (rms) is applied between the lead wires for 60 seconds.																			
	Body Insulation	No failures	The terminals (leads) of the capacitor shall be connected together. A metal foil is tightly wrapped around the body of the capacitor at a distance of about 3 to 4 mm from each terminal. The capacitor is then inserted into a container filled with metal balls approximately 1 mm in diameter. 4,000 VAC (rms) is applied for 60 seconds between the capacitor lead wires and metal balls. (charge/discharge current ≤ 50 mA)																			
																						
Insulation Resistance (IR)		10,000 MΩ minimum	The insulation resistance shall be measured with 500 ±50 VDC applied after 60 ±5 seconds of charging.

4	Maximum operating temperature																					
5	+25 ±2°C																					
			Pretreatment: Capacitor is stored at 85 ±2°C for 1 hour and then placed at room condition ¹ for 24 ±2 hours before measurement.																			
Terminal Strength	Tensile	Lead wire or capacitor body shall not break.	With the termination in its normal position, the specimen is held by its body in such a manner that the axis of the termination is vertical. A tensile force of 10 N is applied to the termination in the direction of its axis and acting in a direction away from the body of the specimen.																			
	Bending	Lead wire or capacitor body shall not break.	With the termination in its normal position, the specimen is held by its body in such a manner that the axis of the termination is vertical; a mass force of 5 N is then suspended from the end of the termination. The body of the specimen is then inclined within a period of 2 to 3 seconds, through an angle of approximately 90° in the vertical plane and then resumed to its initial position over the same period of time; this operation constitutes one bend. One bend immediately followed by a second bend in the opposite direction.																			
Solderability		Lead wire should have a uniform coating of solder in the axial direction and over 3/4 of its circumference.	The lead wire of the capacitor is dipped into molten solder for 5 ±0.5 seconds. The depth of immersion is up to 1.5 mm (+5/-0 mm) from the root of lead wires. Solder temperature: lead-free solder (Sn-3Ag -0.5Cu) 245°C ±5°C.																			

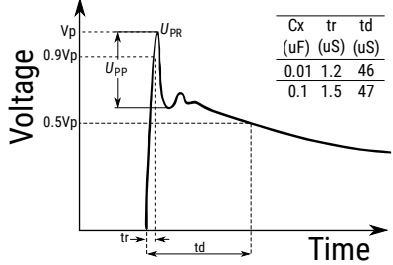

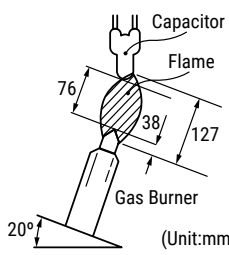

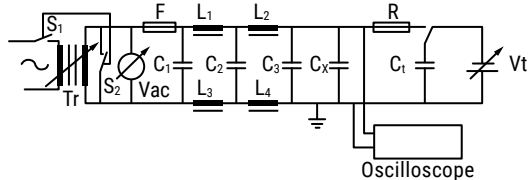

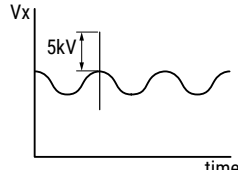

¹ "Room Condition" is defined as follows: Temperature: 15 ~ 35°C/Humidity: 45 ~ 75%/Atmospheric Pressure: 86 ~ 106 kPa.

Table 2 – Performance & Reliability: Test Methods and Conditions cont.

Item		Specification		Test Method											
Soldering Effect (Non-Preheat)	Appearance	No visual defect		<p>As shown in the figure below, the lead wires are immersed in molten solder up to 1.5 mm (+5/-0 mm) from the end of the epoxy meniscus (root of lead wire). Soldering and Mounting Information

Soldering:

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could reflow the solder joint between the lead and ceramic element and/or may result in thermal shocks that can crack the ceramic element.

When soldering these capacitors with a soldering iron, it should be performed under the following conditions:

- Temperature of iron-tip: 400°C maximum
- Soldering iron wattage: 50 W maximum
- Soldering time: 3.5 seconds maximum

Cleaning (ultrasonic cleaning):

To perform ultrasonic cleaning, observe the following conditions:

- Rinse bath capacity: output of 20 watts per liter or less
- Rinsing time: 5 minute maximum
- Do not vibrate the PCB/PWB directly
- Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires

Construction

Marking

These capacitors shall be stamped or laser marked with KEMET's trademark, type designation, capacitor class, rated voltage, rated capacitance, and capacitance tolerance codes. In addition, all devices are marked with the recognized approval mark and a date/lot code for traceability. Marking will be supplied either on one side or both sides of the encapsulated capacitor body. All marking shall be legible to allow for clear identification of the component. Marking appears in legible contrast. Illustrated below is an example of the marking format and content. (Two-sided marking is limited to capacitors with body diameters ≤ 8.0 mm)

X1 440 VAC / Y1 250 VAC

X1 440 VAC / Y1 400 VAC

Date/Lot Code e.g., 9D (December 2019, Taiwan)

9	D	-
Last digit of year, e.g., 3 = 2013	Manufacturing Month: 1-9 = Jan - Sept O = October N = November D = December	Manufacturing Location Code (blank): Taiwan C: Dongguan

Packaging Quantities

Capacitor Body Diameter (mm)	Body Diameter Code ¹	Bulk Bag (Loose)	
		Lead Length (WL25)	Cut Lead Length (WL35, WL50, WL10)
9.0	2	200 pieces/bag	500 pieces/bag
10.0	3		400 pieces/bag
11.0	4		
12.0	5		
13.0	6		
14.0	7	100 pieces/bag	
15.0	8		

¹ The "Body Diameter Code" is located in the third character position of the ordering code. This code identifies the maximum diameter of the capacitor body in millimeters. For more information regarding the ordering code, see "Ordering Information" section of this document.

Lead Spacing	Body Diameter (mm)	Pitch (Carrier Tape)	Body Diameter Code	Reel (7301)	Ammo Pack (7317)
5	8.0 < D ≤ 11.0	12.7	1 - 4	1,500 pieces/reel	1,000 pieces/box
	11.0 < D ≤ 14.0	25.4	5 - 7	750 pieces/reel	500 pieces/box
7.5	≤ 9.0	12.7	2 - 9	1,500 pieces/reel	1,000 pieces/box
	10.0 ≤ D ≤ 11.0	12.7	3 - 4	1,000 pieces/reel	1,000 pieces/box
	> 11.0	25.4	5 - 9	500 pieces/reel	500 pieces/box
10, 12.5	8.0 ≤ D ≤ 16.0	25.4	1 - 9	500 pieces/reel	500 pieces/box

Height to Seating Plane ² (straight leads)	H	20.0 +1.5/-1.0	N/A	20.0 +1.5/-1.0	N/A	20.0 +1.5/-1.0	N/A
Lead Protrusion	ℓ	2.0 maximum					
Diameter of Sprocket Hole	D ₀	4.0 ±0.2					
Lead Diameter	φd	0.6 ±0.1					
Carrier Tape Thickness	t ₁	0.6 ±0.3					
Total Thickness (Carrier Tape, Hold-Down Tape and Lead)	t ₂	1.5 maximum					
Component Alignment (front/ back)	Δh ₁	2.0 maximum					
	Δh ₂						
Cut Out Length	L	11.0 maximum					
Hold-Down Tape Width	W ₀	10.0 minimum					
Hold-Down Tape Position	W ₂	3.0 maximum			1.5 ±1.5		
Coating Extension on Leads (meniscus)	e	3.0 maximum for straight lead; not to exceed the bend for preformed ¹ lead configurations.					
Body Thickness	T	8.0 maximum					

¹ Prefromed (crimped) lead configurations include vertical kink and outside kink. See "Lead Configurations" and "Ordering Information" sections of this document for further details.

² Also referred to as "lead length" in this document.

Application Notes:

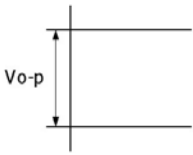

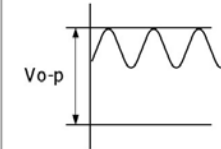

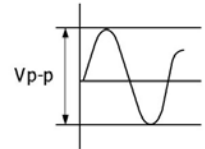

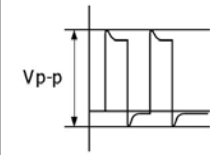

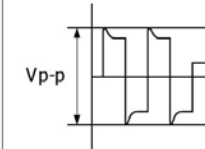

Storage and Operating Conditions:

The Insulating coating of these devices does not form an air and moisture tight seal. Avoid exposure to moisture and do not use or store these devices in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. Before cleaning, bonding or molding these devices, it is important to verify that your process does not affect product quality and performance. KEMET recommends testing and evaluating the performance of a cleaned, bonded or molded product prior to implementing and/or qualifying any of these processes. Store the capacitors where the temperature and relative humidity do not exceed 40 degrees centigrade and 70% respectively. For optimum solderability, capacitor stock should be used promptly, preferably within 6 months of receipt.

Working Voltage:

Application voltage (V_{p-p} or V_{o-p}) must not exceed the voltage rating of the capacitor. Irregular voltages can be generated for a transient period of time when voltage is initially applied and/or removed from a circuit. It is important to choose a capacitor with a voltage rating greater than or equal to these irregular voltages.

Application Notes (cont.):

Voltage	DC Voltage	DC+AC Voltage	AC Voltage	Pulse Voltage (1)	Pulse Voltage (2)
Positional Measurement					

Operating Temperature and Self-Generating Heat:

The surface temperature of a capacitor should be kept below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself. When the capacitor is used in a high-frequency current, pulse current or similar current, it may self-generate heat due to dielectric loss. Temperature rise due to self-generated heating should not exceed 20°C (while operated at an atmosphere temperature of 25°C).

Handling - Vibration and Impact:

Do not expose these devices or their leads to excessive shock or vibration during use.

FAILURE TO FOLLOW THE ABOVE CAUTIONS MAY RESULT, WORST CASE, IN A SHORT CIRCUIT AND CAUSE FUMING OR PARTIAL DISPERSION WHEN THE PRODUCT IS USED.

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
