

915 MHz Ultra Low-Power Sub-GHz Transceiver Module

Features

- Module designed from the MRF89XA Integrated Ultra Low-Power, Sub-GHz Transceiver IC
- Supports MiWi™ Development Environment Proprietary Wireless Networking Protocols
- 4-Wire Serial Peripheral Interface (SPI) with Interrupts
- Small Size: 0.7" x 1.1" (17.8 mm x 27.9 mm), Surface Mountable – pin compatible with MRF89XAM8A
- Integrated Crystal, Internal Voltage Regulator, Matching Circuitry and Printed Circuit Board (PCB) Antenna
- Easy Integration into Final Product – Minimize Product Development, Quicker Time to Market
- Compatible with Microchip's Microcontroller Families (PIC16, PIC18, PIC24, dsPIC33 and PIC32)
- Modular Device Approval for United States (FCC), Canada (IC) and Radio Regulation Certified for Australia/New Zealand (C-TICK)

Operational

- Operating Voltage: 2.1–3.6V (3.3V typical)
- Temperature Range: -40°C to +85°C Industrial
- Low-Current Consumption:
 - Rx mode: 3 mA (typical)
 - Tx mode: 25 mA at +10 dBm (typical)
 - Sleep: 0.1 µA (typical)

RF/Analog Features

- ISM Band 902–928 MHz Operation
- Modulation: FSK and OOK
- Data Rate:
 - FSK: 200 kbps
 - OOK: 28 kbps
- Reception sensitivity
 - FSK: -105 dBm (typical) at 25 kbps
 - OOK: -111 dBm (typical) at 2 kbps
- +10 dBm Typical Output Power with 21 dB Tx Power Control Range

Media Access Controller (MAC)/ Baseband Features

- Packet handling feature with data whitening and automatic CRC generation
- Incoming sync word (pattern) recognition
- Built-in bit synchronizer for incoming data, and clock synchronization and recovery
- 64-byte transmit/receive FIFO with preload in Stand-by mode
- Supports Manchester encoding/decoding techniques

TO OUR VALUED CUSTOMERS

It is our intention to provide our valued customers with the best documentation possible to ensure successful use of your Microchip products. To this end, we will continue to improve our publications to better suit your needs. Our publications will be refined and enhanced as new volumes and updates are introduced.

If you have any questions or comments regarding this publication, please contact the Marketing Communications Department via E-mail at docerrors@microchip.com or fax the **Reader Response Form** in the back of this data sheet to (480) 792-4150. We welcome your feedback.

Most Current Data Sheet

To obtain the most up-to-date version of this data sheet, please register at our Worldwide Web site at:

<http://www.microchip.com>

You can determine the version of a data sheet by examining its literature number found on the bottom outside corner of any page. The last character of the literature number is the version number, (e.g., DS30000A is version A of document DS30000).

Errata

An errata sheet, describing minor operational differences from the data sheet and recommended workarounds, may exist for current devices. As device/documentation issues become known to us, we will publish an errata sheet. The errata will specify the revision of silicon and revision of document to which it applies.

To determine if an errata sheet exists for a particular device, please check with one of the following:

- Microchip's Worldwide Web site; <http://www.microchip.com>
- Your local Microchip sales office (see last page)

When contacting a sales office, please specify which device, revision of silicon and data sheet (include literature number) you are using.

Customer Notification System

Register on our web site at www.microchip.com to receive the most current information on all of our products.

1.0 DEVICE OVERVIEW

The MRF89XAM9A is an ultra low-power sub-GHz surface mount transceiver module with integrated crystal, internal voltage regulator, matching circuitry and PCB antenna. The MRF89XAM9A module operates in the United States/Canada 902–928 MHz ISM frequency band. The integrated module design frees the integrator from extensive RF and antenna design, and regulatory compliance testing, ballowing quicker time to market.

The MRF89XAM9A module is compatible with Microchip’s MiWi™ Development Environment software stacks. The software stacks are available as a free download, including source code, from the Microchip’s web site <http://www.microchip.com/wireless>.

The MRF89XAM9A module has received regulatory approvals for modular devices in the United States (FCC) and Canada (IC). Modular device approval removes the need for expensive RF and antenna design, and allows the user to place the MRF89XAM9A module inside a finished product and it does not require regulatory testing for an intentional radiator (RF transmitter). To maintain conformance, refer to module settings in [Section 3.1.1, MRF89XAM9A SETTINGS](#) for the United States and [Section 3.2.1, MRF89XAM9A SETTINGS](#) for Canada.

1.1 Interface description

The simplified block diagram of the MRF89XAM9A module is shown in [Figure 1-1](#). The module is based on the Microchip Technology MRF89XA Ultra Low-Power Sub-GHz Transceiver Integrated Circuit (IC). The module interfaces to many popular Microchip PIC® microcontrollers through a 3-wire serial SPI interface, two chip selects (configuration and data), two interrupts Interrupt Request 0 (IRQ0) and Interrupt Request 1 (IRQ1), Reset, power and ground as shown in [Figure 1-2](#). [Table 1-1](#) provides the pin descriptions.

Data communication and module configuration are documented in the “*MRF89XA Ultra Low-Power, Integrated Sub-GHz Transceiver*” (DS70622) Data Sheet. For more information on specific serial interface protocol and general register definitions, refer to the “*MRF89XA Data Sheet*” and see [Section 1.3, Operation](#) for specific register settings unique to the MRF89XAM9A module operation to maintain regulatory compliance.

FIGURE 1-2: MICROCONTROLLER TO MRF89XAM9A INTERFACE

1.2 Mounting Details

The MRF89XAM9A is a surface mountable module. The dimensions of the module are shown in Figure 1-3. The module PCB is 0.032" thick with castellated mounting holes on the edge. Figure 1-4 is the recommended host PCB footprint for the MRF89XAM9A.

The MRF89XAM9A has an integrated PCB antenna. For the best performance, follow the mounting details shown in Figure 1-5. It is recommended that the module be mounted on the edge of the host PCB and an area around the antenna, approximately 3.4" (8.6 cm), be kept clear of metal objects for best performance. A host PCB ground plane around the MRF89XAM9A acts as a counterpoise to the PCB antenna. It is recommended to extend the ground plane at least 0.4" (1 cm) around the module.

FIGURE 1-3: MODULE DETAILS

FIGURE 1-4: RECOMMENDED PCB FOOTPRINT

MRF89XAM9A

FIGURE 1-5: MOUNTING DETAILS

1.3 Operation

The MRF89XAM9A module is based on the Microchip's MRF89XA Ultra Low-Power, Integrated ISM Band Sub-GHz Transceiver IC. Data communication and module configuration are documented in the "*MRF89XA Ultra Low-Power, Integrated ISM Band Sub-GHz Transceiver Data Sheet*" (DS70622).

The following section emphasizes operational settings that are unique to the MRF89XAM9A module design that must be followed for the operation.

1.3.1 RESET

Pin 2 of the module, Reset, allows an external reset of the MRF89XA IC. Reset is connected to the TEST8 pin of the MRF89XA IC. During normal operations of the MRF89XAM9A, the Reset pin should be held in a high impedance state. For more information on assertion of the RESET pin, refer to "*Section 3.1.2 Manual Reset*" in the "*MRF89XA Data Sheet*" (DS70622).

1.3.2 CRYSTAL FREQUENCY

When calculating frequency deviation, bit rate, receiver bandwidth, and PLL R, P and S values, use crystal frequency $f_{xtal} = 12.8$ MHz.

1.3.3 CLOCK OUTPUT (CLKOUT)

The CLKOUT pin 19 of the MRF89XA IC is not used on the module. Ensure that the CLKOUT signal is disabled to minimize current consumption.

1.3.4 FREQUENCY BAND SELECT

The Frequency Band Select bits (FBS<1:0>) in the GCONREG<4:3> should be set for target channel range 902–915 MHz FBS<1:0> = '00' or 915–928 MHz FBS<1:0> = '01'.

1.3.5 VCO TANK TRIM VALUE

The VCO Trim bits (VCOT<1:0>) in the GCONREG<2:1> should be set for VCOT<1:0> = '01' for the inductor values of the module.

1.3.6 BIT RATE

The maximum bit rate value will be limited to 28 kbps for OOK modulation due to the crystal frequency of 12.8 MHz.

MRF89XAM9A

NOTES:

2.0 CIRCUIT DESCRIPTION

The MRF89XAM9A module interfaces to Microchip's PIC16, PIC18, PIC24, PIC32 and dsPIC33 microcontrollers with a minimum of external components through digital only connections. An example application schematic is shown in [Figure 2-1](#).

2.1 Module Schematic

The MRF89XAM9A module is based on the Microchip's MRF89XA Ultra Low-Power, Integrated ISM Band Sub-GHz Transceiver IC. The serial I/O (CSCON, CSDATA, SCK, SDO and SDI), Reset, IRQ0 and IRQ1 pins are routed out and available on the module pins as shown in [Figure 2-2](#). Crystal X1 is a 12.8 MHz crystal with a frequency tolerance of ± 10 ppm at 25°C. The RFIO output is matched to the SAW filter FL1 and further matched to the PCB trace antenna.

[Figure 2-2](#) illustrates the MRF89XAM9A schematics. [Table 2-1](#) details the Bill of Materials (BOM).

MRF89XAM9A

2.2 Printed Circuit Board

The MRF89XAM9A module PCB is constructed with high temperature FR4 material that is four layers and 0.032 inches thick. The layers are shown in [Figure 2-3](#) through [Figure 2-8](#). The PCB layer stack up is shown in [Figure 2-9](#)

FIGURE 2-3: TOP SILK SCREEN

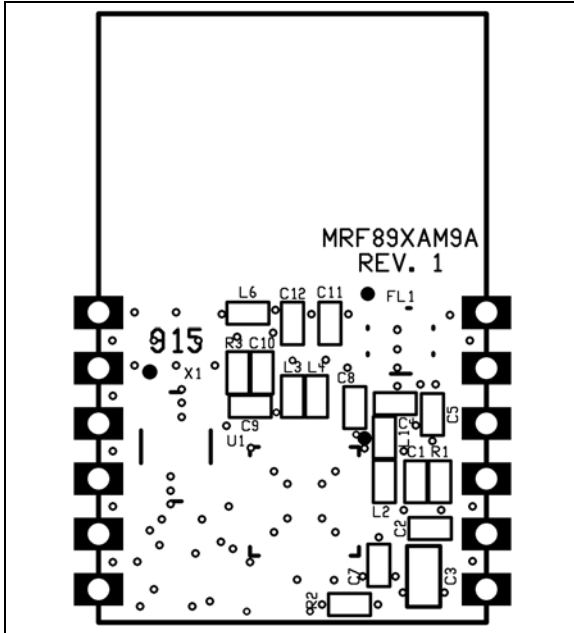

FIGURE 2-4: TOP COPPER

FIGURE 2-5: GROUND PLANE

FIGURE 2-6: POWER PLANE

FIGURE 2-7: BOTTOM COPPER

FIGURE 2-8: BOTTOM SILK SCREEN

FIGURE 2-9: PCB LAYER STACK UP

MRF89XAM9A

2.3 PCB Antenna

The PCB antenna is fabricated on the top copper trace. [Figure 2-10](#) shows the PCB antenna dimensions. The layers below the antenna have no copper traces. The ground and power planes under the components serve as a counterpoise to the PCB antenna. Additional ground plane on the host PCB will substantially enhance the performance of the module. For best performance, place the module on the host PCB by following the recommendations given in [Section 1.2, Mounting Details](#).

The PCB antenna was designed and simulated using Ansoft Designer[®] and HFSS[™] 3D full-wave solver software by ANSYS, Inc. (www.ansoft.com). The goal of the design is to create a compact, low-cost antenna with the best radiation pattern. [Figure 2-11](#) shows the PCB antenna simulation drawing and [Figure 2-12](#) and [Figure 2-13](#) show the simulated 2D and 3D radiation patterns. As shown by the radiation patterns, the performance of the antenna is dependant on the orientation of the module. [Figure 2-14](#) shows the impedance simulation and [Figure 2-15](#) shows the

impedance measurement. The discrete matching circuitry matches the impedance of the antenna with the SAW filter and MRF89XA transceiver IC.

3.0 REGULATORY APPROVAL

The MRF89XAM9A module has received regulatory approvals for modular devices in the United States and Canada. Modular device approval allows the end user to place the MRF89XAM9A module inside a finished product and it does not require regulatory testing for an intentional radiator (RF transmitter), provided no changes or modifications are made to the module circuitry. Changes or modifications could void the user's authority to operate the equipment. The end user must comply with all of the instructions provided by the Grantee, which indicate installation and/or operating conditions necessary for compliance.

The integrator is still responsible for testing the end product for any additional compliance requirements required with this module installed (digital device emission, PC peripheral requirements, etc.) in the specific country that the end device will be marketed.

For more information on regulatory compliance, refer to the specific country radio regulations in the following sections.

3.1 United States

The MRF89XAM9A has received Federal Communications Commission (FCC) CFR47 Telecommunications, Part 15 Subpart C "Intentional Radiators" 15.247 and 15.249 and modular approval in accordance with Part 15.212 Modular Transmitter approval. The MRF89XAM9A module can be integrated into a finished product without obtaining subsequent and separate FCC certification.

The MRF89XAM9A module has been labeled with its own FCC ID number, and if the FCC ID is not visible when the module is installed inside another device, then the outside of the finished product into which the module is installed must also display a label referring to the enclosed module. This exterior label can use the following wordings:

Contains Transmitter Module FCC ID:
OA3MRF89XAM9A
or
Contains FCC ID: OA3MRF89XAM9A
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Requirements for product labeling are given in Part 15.19 Labeling Requirements.

The user's manual should include the following statement:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment OFF and ON, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

3.1.1 MRF89XAM9A SETTINGS

To meet the FCC requirements, the following settings must be observed by the integrator:

3.1.1.1 FSK Modulation

The following settings configure the MRF89XAM9A for wideband digital modulation techniques that conform to the requirements of Part 15.247. These settings allow higher radio frequency (RF) output power and greater link budget:

- Bit Rate Setting: 50 - 200 kbps
 - Transmit Power Maximum Setting: 13 dBm
- Bit Rate Setting: 2 - 40 kbps
 - Transmit Power Maximum Setting: 7 dBm
- Frequency Deviation Setting: 200 kHz
- Data Whitening: On
- Lower Frequency Setting: 902.800 MHz
- Upper Frequency Setting: 926.500 MHz

MRF89XAM9A

3.1.1.2 OOK Modulation

The following settings configure the MRF89XAM9A for narrowband operation that conform to the requirements of the part 15.249. The part 15.249 requires a much lower power setting than it is allowed in the part 15.247. These settings are good for applications that require lower transmit power current consumption and shorter transmit distances:

- Transmit Power Maximum Setting: 1 dBm
- Bit Rate Maximum Setting: 28 kbps
- Frequency Deviation Setting: 200 kHz
- Lower Frequency Setting: 902.330 MHz
- Upper Frequency Setting: 927.500 MHz

3.1.2 RF EXPOSURE

All transmitters regulated by the Federal Communications Commission (FCC) must comply with RF exposure requirements. OET Bulletin 65 “*Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields*” provides assistance in determining whether proposed or existing transmitting facilities, operations or devices comply with limits for human exposure to RF fields adopted by the FCC. The bulletin offers guidelines and suggestions for evaluating compliance.

If appropriate, compliance with exposure guidelines for mobile and unlicensed devices can be accomplished by using warning labels and by providing informations concerning minimum separation distances from transmitting structures and proper installation of antennas.

The following statement must be included as a Caution statement in manuals and OEM products to alert users of the FCC RF Exposure compliance:

To satisfy FCC RF Exposure requirements for mobile and base station transmission devices, a separation distance of 20 cm or more should be maintained between the antenna of this device and persons during operation. To ensure compliance, operation at closer than this distance is not recommended.

The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

If the MRF89XAM9A module is used in a portable application (antenna is less than 20 cm from persons during operation), the integrator is responsible for performing the Specific Absorption Rate (SAR) testing in accordance with FCC rules 2.1091.

3.1.3 HELPFUL WEB SITES

Federal Communications Commission (FCC)
<http://www.fcc.gov>

3.2 Canada

The MRF89XAM9A module has been certified for use in Canada under Industry Canada (IC) Radio Standards Specification (RSS) RSS-210 and RSS-Gen. Modular approval permits the installation of a module in a host device without the need to recertify the device.

Labeling Requirements for the Host Device (from Section 3.2.1, RSS-Gen, Issue 3, December 2010).

The host device must be labeled to identify the module within the host device.

The Industry Canada certification label of a module shall be clearly visible at all times when installed in the host device, otherwise the host device must be labeled to display the Industry Canada certification number of the module, preceded by the words "Contains transmitter module", or the word "Contains", or similar wording expressing the same meaning, as follows:

Contains transmitter module IC: 7693A-89XAM9A

User Manual Notice for License-Exempt Radio Apparatus (from Section 7.1.3 RSS-Gen, Issue 3, December 2010).

User manuals for license-exempt radio apparatus must contain the following or equivalent notice in a conspicuous location in the user manual or alternatively on the device or both.

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

3.2.1 MRF89XAM9A SETTINGS

To meet Industry Canada (IC) requirements, the following settings must be observed by the integrator.

3.2.1.1 FSK Modulation

The following settings configure the MRF89XAM9A for wideband digital modulation techniques that conform to the requirements of RSS-210 Issue 8, Annex 8. These settings allow higher radio frequency (RF) output power and greater link budget.

- Bit Rate Setting: 50–200 kbps
 - Transmit Power Maximum Setting: 13 dBm
- Bit Rate Setting: 2–40 kbps
 - Transmit Power Maximum Setting: 7 dBm
- Frequency Deviation Setting: 200 kHz
- Data Whitening: On
- Lower Frequency Setting: 902.800 MHz
- Upper Frequency Setting: 926.500 MHz

3.2.1.2 OOK Modulation

The following settings configure the MRF89XAM9A for narrowband operation that conform to the requirements of RSS-Gen Issue 3. RSS-Gen Issue 3 requires a much lower power setting than is allowed in Part RSS-210 Issue 8 Annexure 8. These settings are good for applications that require lower transmit power current consumption and shorter transmit distances.

- Transmit Power Maximum Setting: 1 dBm
- Bit Rate Maximum Setting: 28 kbps
- Frequency Deviation Setting: 200 kHz
- Lower Frequency Setting: 902.330 MHz
- Upper Frequency Setting: 927.500 MHz

3.2.2 HELPFUL WEB SITES

Industry Canada: <http://www.ic.gc.ca/>

MRF89XAM9A

3.3 Australia

MRF89XAM9A module RF transmitter test reports can be used in part to demonstrate compliance in accordance with ACMA Radio communications “Short Range Devices” Standard 2004 (The Short Range Devices standard calls up the AS/NZS 4268:2008 industry standard). The MRF89XAM9A module test reports can be used as part of the product certification and compliance folder. For more information on the RF transmitter test reports, contact Microchip Technology Australia office.

AS/NZS 4268:2008 refers to the USA FCC 15.247 RF standards, the frequency limits of 915 - 928 MHz apply in Australia.

To meet overall Australian end product compliance, the integrator must construct a compliance folder containing all relevant compliance test reports e.g. RF, EMC, electrical safety and DoC (Declaration of Conformity) etc. It is the responsibility of the integrator to know what is required in the compliance folder for ACMA compliance. For more information on Australia compliance, refer to the Australian Communications and Media Authority web site <http://www.acma.gov.au/>.

3.3.1 MRF89XAM9A SETTINGS

To meet Australian Communications and Media Authority (ACMA) requirements, the following settings must be observed by the integrator.

3.3.1.1 FSK Modulation

The following settings configure the MRF89XAM9A for wideband digital modulation techniques that conform to the requirements of Part 15.247:

- Bit Rate Setting: 50 - 200 kbps
 - Transmit Power Maximum Setting: 13 dBm
- Bit Rate Setting: 2 - 40 kbps
 - Transmit Power Maximum Setting: 7 dBm
- Frequency Deviation Setting: 200 kHz
- Data Whitening: On
- Lower Frequency Setting: 915.800 MHz
- Upper Frequency Setting: 927.500 MHz

3.3.2 HELPFUL WEB SITES

The Australian Communications and Media Authority: www.acma.gov.au/.

3.4 New Zealand

MRF89XAM9A module RF transmitter test reports can be used in part to demonstrate compliance against the New Zealand “General User Radio License for Short Range Devices”. New Zealand Radio communications (Radio Standards) Notice 2010 calls up the AS / NZS 4268:2008 industry standard. The MRF89XAM9A Module test reports can be used as part of the product certification and compliance folder. For more information on the RF transmitter test reports, contact Microchip Technology.

Information on the New Zealand short range devices license can be found in the following web links:

<http://www.rsm.govt.nz/cms/licensees/types-of-licence/general-user-licences/short-range-devices>

and

<http://www.rsm.govt.nz/cms/policy-and-planning/spectrum-policy-overview/legislation/gazette-notices/product-compliance/radiocommunications-radio-standards-notice-2010>.

While the AS /NZS 4268:2008 refers to the USA FCC 15.247 and EN 300 220-1 V2.3.1 RF standards, the frequency limits of 921 MHz to 928 MHz apply in New Zealand.

To meet overall New Zealand end product compliance, the developer must construct a compliance folder containing all relevant compliance test reports e.g. RF, EMC, electrical safety and DoC (Declaration of Conformity) etc. It is the responsibility of the developer to know what is required in the compliance folder for New Zealand Radio communications. For more information on New Zealand compliance, refer to the web site <http://www.rsm.govt.nz/>.

3.4.1 MRF89XAM9A SETTINGS

To meet Radio Spectrum Ministry of Economic Development requirements, the following settings must be observed by the integrator:

3.4.1.1 FSK Modulation

The following settings configure the MRF89XAM9A for wideband digital modulation techniques that conform to the requirements of Part 15.247:

- Bit Rate Setting: 50 - 200 kbps
 - Transmit Power Maximum Setting: 13 dBm
- Bit Rate Setting: 2 - 40 kbps
 - Transmit Power Maximum Setting: 7 dBm
- Frequency Deviation Setting: 200 kHz
- Data Whitening: On
- Lower Frequency Setting: 921.800 MHz
- Upper Frequency Setting: 927.500 MHz

3.4.2 HELPFUL WEB SITES

Radio Spectrum Ministry of Economic Development:

MRF89XAM9A

NOTES:

4.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings

Ambient temperature under bias	-40°C to +85°C
Storage temperature	-55°C to +125°C
Voltage on VIN with respect to VSS	-0.3V to 6V
Voltage on any combined digital and analog pin with respect to VSS (except VIN)	-0.3V to (VIN + 0.3V)
Input current into pin (except VIN and VSS).....	-25 mA to 25 mA

NOTICE: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

MRF89XAM9A

TABLE 4-1: RECOMMENDED OPERATING CONDITIONS

Parameter	Min	Typ	Max	Unit	Condition
Ambient Operating Temperature	-40	—	+85	°C	—
Supply Voltage for RF, Analog and Digital Circuits	2.1	—	3.6	V	—
Supply Voltage for Digital I/O	2.1	—	3.6	V	—
Input High Voltage (V _{IH})	0.5 * V _{IN}	—	V _{IN} + 0.3	V	—
Input Low Voltage (V _{IL})	-0.3V	—	0.2 * V _{IN}	V	—
AC Peak Voltage on Open Collector Outputs (I _O) ⁽¹⁾	V _{IN} - 1.5	—	V _{IN} + 1.5	V	—

Note 1: At minimum, V_{IN} - 1.5V should not be lower than 1.8V.

TABLE 4-2: CURRENT CONSUMPTION

Symbol	Chip Mode	Min	Typ	Max	Unit	Condition
IDDSL	Sleep	—	0.1	2	µA	Sleep clock disabled, all blocks disabled
IDDST	Idle	—	65	80	µA	Oscillator and baseband enabled
IDDFS	Frequency Synthesizer	—	1.3	1.7	mA	Frequency synthesizer running
IDDTX	Tx	—	25 16	30 21	mA mA	Output power = +10 dBm Output power = +1 dBm ⁽¹⁾
IDDRX	Rx	—	3.0	3.5	mA	—

Note 1: Guaranteed by design and characterization.

TABLE 4-3: DIGITAL I/O PIN INPUT SPECIFICATIONS⁽¹⁾

Symbol	Characteristic	Min	Typ	Max	Unit	Condition
V _{IL}	Input Low Voltage	—	—	0.2 * V _{IN}	V	—
V _{IH}	Input High Voltage	0.8 * V _{IN}	—	—	V	—
I _{IL}	Input Low Leakage Current ⁽²⁾	-0.5	—	0.5	µA	V _{IL} = 0V
I _{IH}	Input High Leakage Current	-0.5	—	0.5	µA	V _{IH} = V _{IN} , V _{IN} = 3.7
V _{OL}	Digital Low Output Voltage	—	—	0.1 * V _{IN}	—	I _{OL} = 1 mA
V _{OH}	Digital Low Output	0.9 * V _{IN}	—	—	V	I _{OH} = -1 mA

Note 1: Measurement Conditions: T_A = 25°C, V_{IN} = 3.3V, Crystal Frequency = 12.8 MHz, unless otherwise specified.

2: Negative current is defined as the current sourced by the pin.

TABLE 4-4: PLL PARAMETERS AC CHARACTERISTICS⁽¹⁾

Symbol	Parameter	Min	Typ	Max	Unit	Condition
FRO	Frequency Ranges	902	—	928	MHz	—
BRFSK	Bit Rate (FSK)	2	—	200	kbps	NRZ
BROOK	Bit Rate (OOK)	1.56	—	28	kbps	NRZ
FDFSK	Frequency Deviation (FSK)	33	—	200	kHz	—
FXTAL	Crystal Oscillator Frequency	—	12.8	—	MHz	—
FSSTP	Frequency Synthesizer Step	—	2	—	kHz	Variable, depending on the frequency
TSOSC	Oscillator Wake-up Time	—	1.5	5	ms	From Sleep mode ⁽¹⁾
TSFS	Frequency Synthesizer Wake-up Time; at most, 10 kHz away from the target	—	500	800	μs	From Stand-by mode
TSHOP	Frequency Synthesizer Hop Time; at most, 10 kHz away from the target	—	180	—	μs	200 kHz step
		—	200	—	μs	1 MHz step
		—	250	—	μs	5 MHz step
		—	260	—	μs	7 MHz step
		—	290	—	μs	12 MHz step
		—	320	—	μs	20 MHz step
		—	340	—	μs	27 MHz step

Note 1: Guaranteed by design and characterization.

MRF89XAM9A

TABLE 4-5: RECEIVER AC CHARACTERISTICS⁽¹⁾

Symbol	Parameter	Min	Typ	Max	Unit	Condition
RSF	Sensitivity (FSK)	—	-105	—	dBm	915 MHz, BR = 25 kbps, $f_{dev} = 50$ kHz, $f_c = 100$ kHz
		—	-101	—	dBm	915 MHz, BR = 66.7 kbps, $f_{dev} = 100$ kHz, $f_c = 200$ kHz
RSO	Sensitivity (OOK)	—	-111	—	dBm	915 MHz, 2 kbps NRZ $f_c - f_o = 50$ kHz, $f_o = 50$ kHz
		—	-105	—	dBm	915 MHz, 16.7 kbps NRZ $f_c - f_o = 100$ kHz, $f_o = 100$ kHz
CCR	Co-Channel Rejection	—	-12	—	dBc	Modulation as wanted signal
ACR	Adjacent Channel Rejection	—	27	—	dB	Offset = 300 kHz, unwanted tone is not modulated
		—	52	—	dB	Offset = 600 kHz, unwanted tone is not modulated
		—	57	—	dB	Offset = 1.2 MHz, unwanted tone is not modulated
BI	Blocking Immunity	—	-48	—	dBm	Offset = 1 MHz, unmodulated
		—	-37	—	dBm	Offset = 2 MHz, unmodulated, no SAW
		—	-33	—	dBm	Offset = 10 MHz, unmodulated, no SAW
RXBWF	Receiver Bandwidth in FSK Mode ⁽²⁾	50	—	250	kHz	Single side BW, Polyphase Off
RXBWU	Receiver Bandwidth in OOK Mode ⁽²⁾	50	—	400	kHz	Single side BW, Polyphase On
ITP3	Input Third Order Intercept Point	—	-28	—	dBm	Interferers at 1 MHz and 1.950 MHz offset
TSRWF	Receiver Wake-up Time	—	280	500	μs	From FS to Rx ready
TSRWS	Receiver Wake-up Time	—	600	900	μs	From Stand-by to Rx ready
TSRHOP	Receiver Hop Time from Rx Ready to Rx Ready with a Frequency Hop	—	400	—	μs	200 kHz step
		—	400	—	μs	1 MHz step
		—	460	—	μs	5 MHz step
		—	480	—	μs	7 MHz step
		—	520	—	μs	12 MHz step
		—	550	—	μs	20 MHz step
		—	600	—	μs	27 MHz step
RSSIST	RSSI Sampling Time	—	—	$1/f_{dev}$	s	From Rx ready
RSSTDR	RSSI Dynamic Range	—	70	—	dB	Ranging from sensitivity

Note 1: Guaranteed by design and characterization.

2: This reflects the whole receiver bandwidth, as described by conditions for active and passive filters.

TABLE 4-6: TRANSMITTER AC CHARACTERISTICS⁽¹⁾

Symbol	Description	Min	Typ	Max	Unit	Condition
RFOP	RF Output Power, Programmable with 8 Steps of typ. 3 dB	—	+12.5	—	dBm	Maximum power setting
		—	-8.5	—	dBm	Minimum power setting
PN	Phase Noise	—	-112	—	dBc/Hz	Measured with a 600 kHz offset at the transmitter output
TXSP	Transmitted Spurious	—	—	-47	dBc	At any offset between 200 kHz and 600 kHz, unmodulated carrier, $f_{dev} = 50$ kHz
Tx2	Second Harmonic	—	—	-40	dBm	No modulation, see Note ⁽²⁾
Tx3	Third Harmonic					
Tx4	Fourth Harmonic					
Txn	Harmonics above Tx4					
FSKDEV	FSK Deviation	±33	±55	±200	kHz	Programmable
TSTWF	Transmitter Wake-up Time	—	120	500	µs	From FS to Tx ready
TSTWS	Transmitter Wake-up Time	—	600	900	µs	From Stand-by to Tx ready

Note 1: Guaranteed by design and characterization.

2: Transmitter in-circuit performance with SAW filter and crystal.

4.1 Timing Specification and Diagram

TABLE 4-7: SPI TIMING SPECIFICATION^(1,2)

Parameter	Min	Typ	Max	Unit	Condition
SPI Configure Clock Frequency	—	—	6	MHz	—
SPI Data Clock Frequency	—	—	1	MHz	—
Data Hold and Setup Time	2	—	—	µs	—
SDI Setup Time for SPI Configure	250	—	—	ns	—
SDI Setup Time for SPI Data	312	—	—	ns	—
$\overline{\text{CSCON}}$ Low to SCK Rising Edge; SCK Falling Edge to $\overline{\text{CSCON}}$ High	500	—	—	ns	—
$\overline{\text{CSDATA}}$ Low to SCK Rising Edge; SCK Falling Edge to $\overline{\text{CSDATA}}$ High	625	—	—	ns	—
$\overline{\text{CSCON}}$ Rising to Falling Edge	500	—	—	ns	—
$\overline{\text{CSDATA}}$ Rising to Falling Edge	625	—	—	ns	—

Note 1: Typical Values: $T_A = 25^\circ\text{C}$, $V_{IN} = 3.3\text{V}$, Crystal Frequency = 12.8 MHz, unless otherwise specified.

2: Negative current is defined as the current sourced by the pin.

MRF89XAM9A

NOTES:

APPENDIX A: REVISION HISTORY

Revision A (July 2011)

This is the initial release of the document.

Revision B (December 2012)

Added regulatory approval information of Australia and New Zealand.

MRF89XAM9A

NOTES:

THE MICROCHIP WEB SITE

Microchip provides online support via our WWW site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQ), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER CHANGE NOTIFICATION SERVICE

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com. Under "Support", click on "Customer Change Notification" and follow the registration instructions.

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support
- Development Systems Information Line

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at: <http://microchip.com/support>

MRF89XAM9A

READER RESPONSE

It is our intention to provide you with the best documentation possible to ensure successful use of your Microchip product. If you wish to provide your comments on organization, clarity, subject matter, and ways in which our documentation can better serve you, please FAX your comments to the Technical Publications Manager at (480) 792-4150.

Please list the following information, and use this outline to provide us with your comments about this document.

TO: Technical Publications Manager Total Pages Sent _____

RE: Reader Response

From: Name _____

Company _____

Address _____

City / State / ZIP / Country _____

Telephone: (_____) _____ - _____ FAX: (_____) _____ - _____

Application (optional):

Would you like a reply? Y N

Device: MRF89XAM9A

Literature Number: DS75017B

Questions:

1. What are the best features of this document?

2. How does this document meet your hardware and software development needs?

3. Do you find the organization of this document easy to follow? If not, why?

4. What additions to the document do you think would enhance the structure and subject?

5. What deletions from the document could be made without affecting the overall usefulness?

6. Is there any incorrect or misleading information (what and where)?

7. How would you improve this document?

PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, for example, on pricing or delivery, refer to the factory or the listed sales office.

<p><u>PART NO.</u></p> <p>Device Module Module Type Tape and Reel Temperature Range</p>	<p>Example:</p> <p>a) MRF89XAM9A-I/RM: Industrial temperature tray.</p> <p>b) MRF89XAM9AT-I/RM: Industrial temperature tape and reel, QFN package, tape and reel.</p>
<p>Device MRF89XAM9A-I/RM: Ultra Low-Power, Integrated ISM Band Sub-GHz Transceiver module</p> <p>Temperature Range I = -40°C to +85°C (Industrial)</p>	

MRF89XAM9A

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

Trademarks

**QUALITY MANAGEMENT SYSTEM
CERTIFIED BY DNV
= ISO/TS 16949 =**

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC[®] MCUs and dsPIC[®] DSCs, KEELOQ[®] code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.
