

# RF MANUAL 20<sup>TH</sup> EDITION

Application and design manual for [Smart Antenna Solutions](#)

May 2017

# RF integration without compromise

At NXP, we are committed to ensuring you have the best mobile connection at all times.

With more than 3 Billion consumers online and over 50 Billion connected devices, the demand for always-on, always-connected devices continues to surge. With access to the internet by mobile device increasing by more than 200% every year, mobile device manufacturers and infrastructure network vendors now face unprecedented challenges to deliver the high performance voice and data services for all the downloading, streaming and cloud based services we have come to expect.

RF front-ends are becoming increasingly complex with the rapid deployment of LTE underway. More antennas are needed as well as support for an ever increasing number of cellular frequency bands. Just a few years ago only a handful of bands would need to be supported, whereas now 30+ bands are supported. To address all these RF challenges, while simultaneously achieving miniaturization and cost reduction, a new approach is needed.

The 20th edition of the RF Manual provides you with a comprehensive overview of our Smart Antenna Solutions with the highest level of integration without compromise; High performance, fully integrated combinations of multiple RF functions close to the antennas, delivering the highest, flawless performance, reliability, flexibility, quality or cost-of-ownership.

## How to use the RF Manual

This document is a resource that lets you explore our RF portfolio.

### Chapter 1 – Products by application

Discusses trends and requirements for particular applications, and lists the products we recommend for target systems.

### Chapter 2 – NXP technologies

Describes the special process and packaging technologies that position us as a leader in RF.

### Chapter 3 – Products by category

Presents products by function, with detailed specs for easy comparison.

### Chapter 4 – Design resources

Summarizes the design-support resources that help make it easier to work with our products and reduce time-to-market.

### Chapter 5 – Replacement for discontinued parts

Provides an overview of recently discontinued parts and their (close) replacements from NXP.

### Chapter 6 – Packaging information

Gives an overview of the packages and the marking codes.

### Chapter 7 – Products by NXP type number

Gives all the NXP type numbers mentioned in this manual, in alphanumeric order, so you can quickly find the details for a specific product.

# LEADING IN ADVANCED RF SOLUTIONS

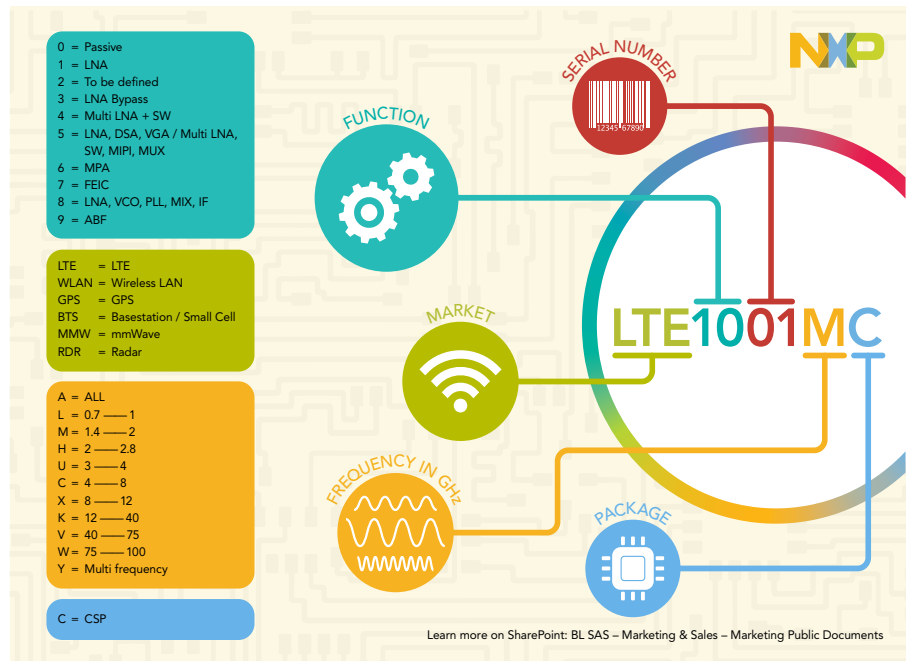

We're **trusted** by the world's top businesses. That's why 9 out of the top 10 smartphone OEMs use NXP GPS LNAs.

## In Focus: BL SAS new type naming convention

As one of the industry's leading technology company, NXP is constantly looking for ways to improve our products and our accessibility to those evaluating our products. One way that we've improved accessibility is by creating a new naming convention for the Smart Antenna Solutions portfolio. The parts you're already ordering will not change. However, new part numbers will follow a simple and consistent structure to make it easier for you to identify and order in the future.

1. The first set of letters in the new part numbers represent the market: LTE, WLAN, GPS, BTS for Basestation and small cell, MMW for millimeter Wave, and RDR for our line of Radar products.
2. The next two numerical digits identify the product's function, like LNA, MPA, etc, see picture.
3. The last two numerical digits are like a serial number used e.g. to indicate revision history.
4. As the frequency is one of the most important aspects in the smart antenna domain, the next alpha digit indicates frequency of the part, like H for 2 – 2.8 GHz, K for 12 - 40 GHz, etc, see below.

5. And lastly, if the part comes in a CSP package, it will be indicated by the letter C.

To get used to this new type naming methodology more quickly, we selected our 55 most important products and 'translated' them according to the new naming convention. You will see them often be communicated next to each other (dual branding). We're confident this will not only be easier to understand but will make ordering simple.

New Name	Current Type	New Name	Current Type	New Name	Current Type

## 1.1 New products

DEV = in DEvelopment

CQS = Customer Qualification Samples

RFS = Released For Supply

Type	New name	Application/description	Expected status June 2015	Planned release	Section
<b>NEW: SiGe:C LNAs (for e.g. GPS)</b>					
BGU8103	GPS1301M	GPS LNA, low current 1 mA	RFS	released	3.1.1
BGU8309	GPS1401M	GPS LNA, small package (0.8 x 0.8 mm <sup>2</sup> )	RFS	released	3.1.1
<b>NEW: LNAs for LTE</b>					
BGS8L5	LTE3301L	LTE LNA with bypass from 0.7 to 1 GHz, 0.7 dB NF, 15 dB gain	DEV	Q2-2017	3.1.1
BGS8M5	LTE3301H	LTE LNA with bypass from 1.5 to 2.7 GHz, 0.8 dB NF, 14 dB gain	DEV	Q2-2017	3.1.1
BGS8C5	LTE3301C	LTE LNA with bypass from 3.4 to 3.8 GHz, 1.0 dB NF, 16 dB gain	DEV	Q2-2017	3.1.1
BGS8U5	LTE3301U	LTE LNA with bypass from 5.1 to 5.95 GHz, 1.25 dB NF, 15 dB gain	DEV	Q2-2017	3.1.1
-	LTE3401L	LTE LNA with bypass from 0.7 to 1 GHz, 0.85 dB NF, 18 dB gain	DEV	Q2-2017	3.1.1
<b>NEW: LNAs for WLAN</b>					
BGS8324	WLAN3001H	2.4 GHz LNA for WLAN, 802.11b/g/n	RFS	released	3.1.1
BGS8358	WLAN3001C	5 GHz LNA for WLAN, 802.11a/n/ac	RFS	released	3.1.1
BGS8424	WLAN3101H	2.4 GHz LNA for WLAN, 802.11b/g/n, small package	RFS	released	3.1.1
BGS8458	WLAN3101C	5 GHz LNA for WLAN, 802.11a/n/ac, small package	RFS	released	3.1.1
BGF8458	WLAN7001C	5 GHz FEIC for WLAN, 802.11a/n/ac	DEV	Q2-2017	3.1.1
<b>NEW: LNAs for wireless infrastructures</b>					
BGU7078	BTS5101H	Variable gain high-linearity LNA 2.3-2.6 GHz, 1.1 dB NF	RFS	released	3.1.1
BGU8061	BTS3001L	High-linearity LNA with bypass 0.3-1.5 GHz, 1.1 dB NF	RFS	released	3.1.1
BGU8062	BTS3001M	High-linearity LNA with bypass 1.5-2.5 GHz, 1.3 dB NF	RFS	released	3.1.1
BGU8063	BTS3001H	High-linearity LNA with bypass 2.5-4.0 GHz, 1.6 dB NF	RFS	released	3.1.1
<b>NEW: DOCSIS Cable Modem</b>					
BGA3131	-	DOCSIS 3.1 upstream amplifier	RFS	released	3.1.3

For the complete product selection please see section 3.1.1

#### Product highlight:

#### WLAN LNAs plus switch BGS8424 [WLAN3101H] and BGS8458 [WLAN3101C]

These fully integrated LNAs plus switch are optimized for mobile IEEE 802.11b/g/n/ac WLAN applications in the 2.4 and 5 GHz bands. Manufactured in our high-performance QUBiC4 GEN8 technology, they combine best-in-class gain, noise figure, linearity for the LNA and an integrated RX/TX/(BT) switch with the process stability and ruggedness that SiGe technology is known for.

#### Features

- ▶ Fully integrated, high-performance LNA and switch (no external matching or DC blocking required)
- ▶ LNA Noise Figure (NF) of 2.0 dB (2.4 GHz) and 2.4 dB (5 GHz), with low current consumption of 8.4 resp. 10.7 mA
- ▶ Integrated TX-RX(-BT) switch with low losses (0.7 dB)
- ▶ Low bypass current of 8 resp. 4  $\mu$ A
- ▶ Single-supply operation covering full Li-ion battery range from 2.7 to 5.25 V
- ▶ Small QFN-style package (1.5 x 1.5 x 0.3 resp. 1.2 x 1.4 x 0.3 mm, 0.4 mm pitch)

## 1.2.2 LTE LNA

While LTE/4G offers consumers much higher data rates (up to 300 Mbits/s) compared to UMTS/3G, LTE smartphones are more complex because they need more antennas, are used for multiple cellular and connectivity frequencies, and require additional switches and duplexers. BGS8x2 and BGS8x1 LTE LNAs increase the receive sensitivity of LTE main and diversity receivers by offering system-optimized gain, low noise figure, and high third-order linearity. As a result, LTE smartphone users enjoy higher and more consistent data rates. These features also mean RF designers have more options, as they can amplify the LTE signal close to the antenna and decrease line losses - something that is especially important for large tablet and combination phone/tablet ("phablet") form factors. The BGS8x1 and BGS8x2 LTE LNAs are available for Low (BGU8L1, BGS8L2), Mid (BGU8M1, BGS8M2) and High (BGU8H1, BGS8H2) cellular bands. The difference between the BGS8x2 and the BGS8x1 is that the BGS8x2 has a switch to bypass the LNA. This is beneficial when high RF signal levels are available at the input and there is no need for additional gain, because the LNA can be bypassed and switched off to lower the power consumption.

### Application diagram of an LTE LNA in a mobile phone

### Recommended products

\* also available in CSP package, contact NXP for detailed information on specifications

For the complete product selection please see section 3.1.1

### Product highlight:

#### LTE LNAs with bypass BGS8x5 [LTE3301x]

The BGS8x5 delivers a full range of LTE LNAs covering the full LTE(-U) frequency range from 700 MHz up to 6 GHz with products, each optimized for a sub-range of frequencies. The BGS8x5 can be applied in both primary and diversity path of LTE receivers to deliver better sensitivity under severe co-existence conditions (e.g. simultaneous cellular TX in FDD systems). The bypass switch allows to switch off the LNA under higher input signal conditions, thereby reducing the current consumption to less than 1 uA. The BGS8x2 requires only one external matching inductor.

### Features

- ▶ Smallest 6-pin leadless package (1.1 mm x 0.7 mm x 0.37mm)
- ▶ Cover all bands with a Low (from 700 to 960 MHz), High (from 1425 to 2700 MHz), Ultra High (from 3400 to 3800 MHz) and C-band (from 5150 to 5850 MHz)
- ▶ Noise figure (NF) between 0.7 and 1.25 dB at a gain between 13 and 15.5 dB
- ▶ Current consumption of 4.5 mA in gain mode, < 1 uA in bypass mode
- ▶ High linearity (1 dB compression point and IIP3)
- ▶ Supply voltage from 1.5 to 3.1 V
- ▶ Require only one input matching inductor

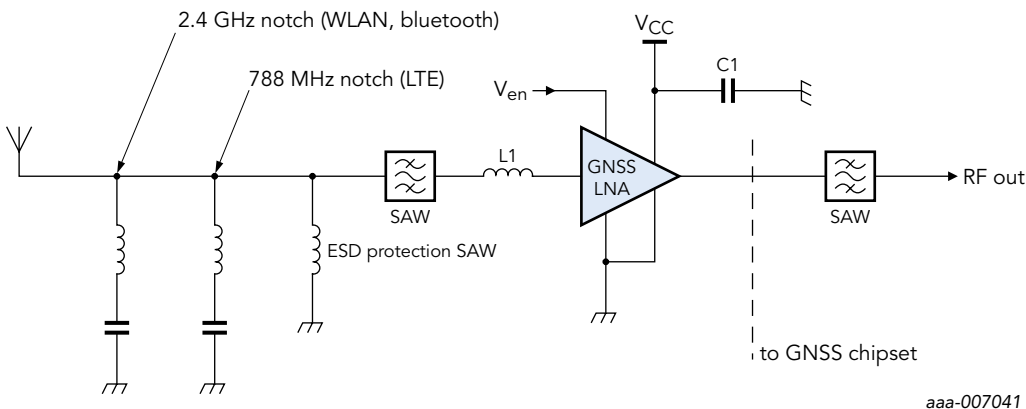

### 1.2.3 GPS for smartphones, tablets and wearables

BGU600x/700x/800x LNAs are designed to improve the linearity, noise figure, and reception of GPS signals, including GloNass and Compass, while offering the smallest footprint in the market. As the industry's first GPS LNAs to dynamically suppress strong cellular, Bluetooth, and WLAN transmit signals, the NXP BGU600x/700x/800x series offers the best reception for weak GPS signals, delivering an improvement of 10 dB or better IP3 under -40 to -20 dBm jamming conditions, while the noise figure remains below 1 dB. Requiring only one external component, the BGU600x/700x/800x LNAs save up to 70% in PCB size and 10% in component cost.

GPS is a standard feature in a wide range of consumer products, from smartphones, wearables, and tablets to digital still cameras, watches, electric cars, and more. GPS signal power levels are weak and below the noise floor at -155 dBm. In many of these products, especially smartphones and tablets, strong transmitters such as Bluetooth, WLAN, and cellular can drive the GPS LNA into compression. When the GPS LNA is in compression, it has lower gain, which causes poor GPS reception; it also generates inter-modulation products and harmonics from the transmitter signals, capable of overpowering weak signals and leading to loss of GPS reception.

The BGU600x/700x/800x series use adaptive biasing to immediately detect any output power from jammers, and compensate by temporarily increasing the current. As a result, optimal GPS signal reception is maintained for as long as possible. Each device in the BGU700x/800x series requires only one input-matching inductor and an optional one supply decoupling capacitor to complete the design. This creates a very compact design and lowers the bill of materials.

#### Application diagram of a GNSS LNA with pre- and post-SAWs and notches, implemented as discretes, for 788 MHz (LTE) and 2.4 GHz (WLAN) suppression

#### Product highlight: GPS LNA in diamond package BGU8309 [GPS1401M]

The BGU8309 [GPS1401M] has all the features of its predecessors put into smaller diamond shaped package. It features adaptive biasing to have optimal linearity versus current consumption performance in co-existence scenarios with radios in mobile phones. In nominal, non-jamming conditions it delivers 17dB gain at a noise figure of 0.7 dB. The BGU8309 requires only one external matching inductor.

#### Features

- ▶ Smallest 5-pin leadless package (0.8 x 0.8 x 0.35 mm)
- ▶ Covers full GNSS L1 band, from 1559 to 1610 MHz
- ▶ Noise figure = 0.7 dB at a gain of 17 dB
- ▶ High 1 dB compression point of -9 dBm and out-of-band IP3i of 5 dBm
- ▶ Supply voltage 1.5 to 3.1 V, supply current 3.6 mA
- ▶ Power-down mode current consumption < 1 uA
- ▶ Integrated, temperature-stabilized bias for easy design

\* also available in CSP package, contact NXP for detailed information on specifications

For the complete product selection please see section 3.1.1

In wearable health and fitness applications like smart watches, low current is critical, but linearity requirements can be relaxed since the only relevant on-board jammers are Bluetooth and 2.4 GHz WLAN. For these low-current applications, NXP offers the BGU8010, which uses 3 mA of current and has a gain of 16 dB, the BGU8020, which uses 2 mA of current and has a gain of 16.5 dB, and the BGU8103, which uses 1.2 mA of current and has a gain of 17 dB.

## Application diagram of wearable health and fitness device, showing the input-match inductor (L1) and a post-SAW

This application consists of the input match inductor L1 and a post SAW. Because no strong jammer signals are present, a pre-SAW is unnecessary.

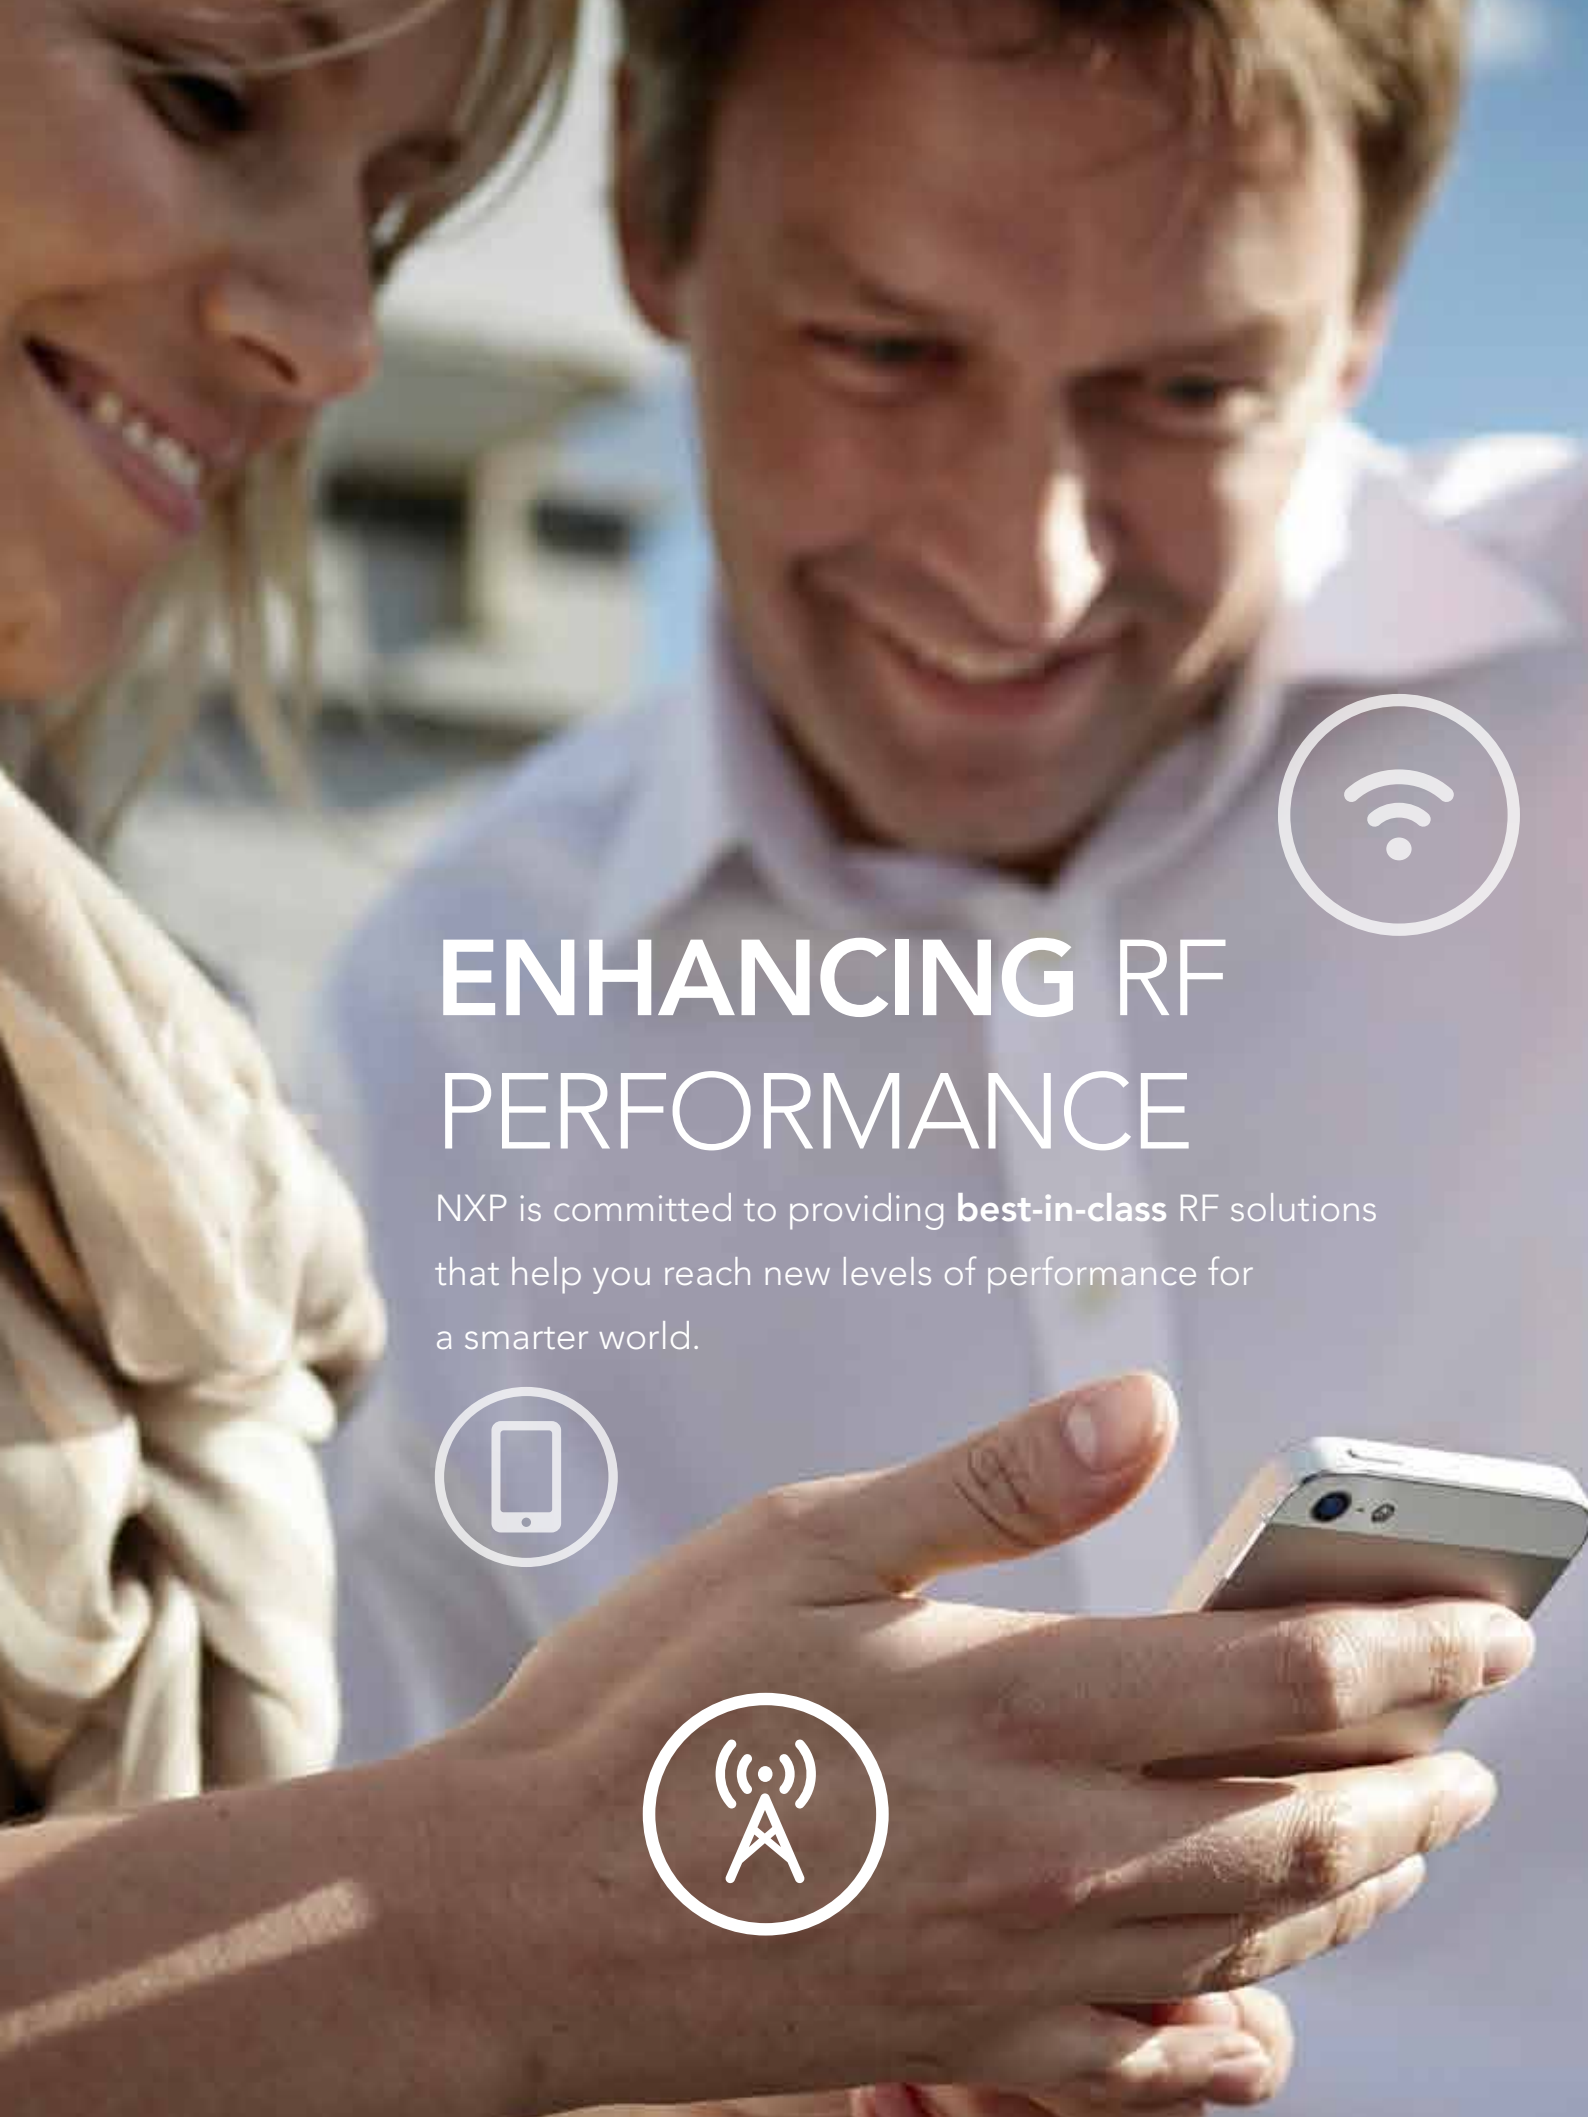

### Product highlight:

#### Low-current GPS LNA BGU8103 [GPS1301M]

Designed for extremely low power consumption, the BGU8103 delivers optimal performance even when exposed to jammers from coexisting cellular and connectivity transmitters.

### Features

- ▶ Covers full GNSS L1 band, from 1559 to 1610 MHz
- ▶ Noise figure (NF) = 0.85 dB
- ▶ Gain 17.3 dB
- ▶ Input 1 dB compression point of -16 dBm
- ▶ Out-of-band IP3i of -8 dBm
- ▶ Supply voltage 1.5 to 3.1 V
- ▶ Optimized performance at low supply current of 1.2 mA
- ▶ Power-down mode current consumption < 1 μA

# ENHANCING RF PERFORMANCE

NXP is committed to providing **best-in-class** RF solutions that help you reach new levels of performance for a smarter world.

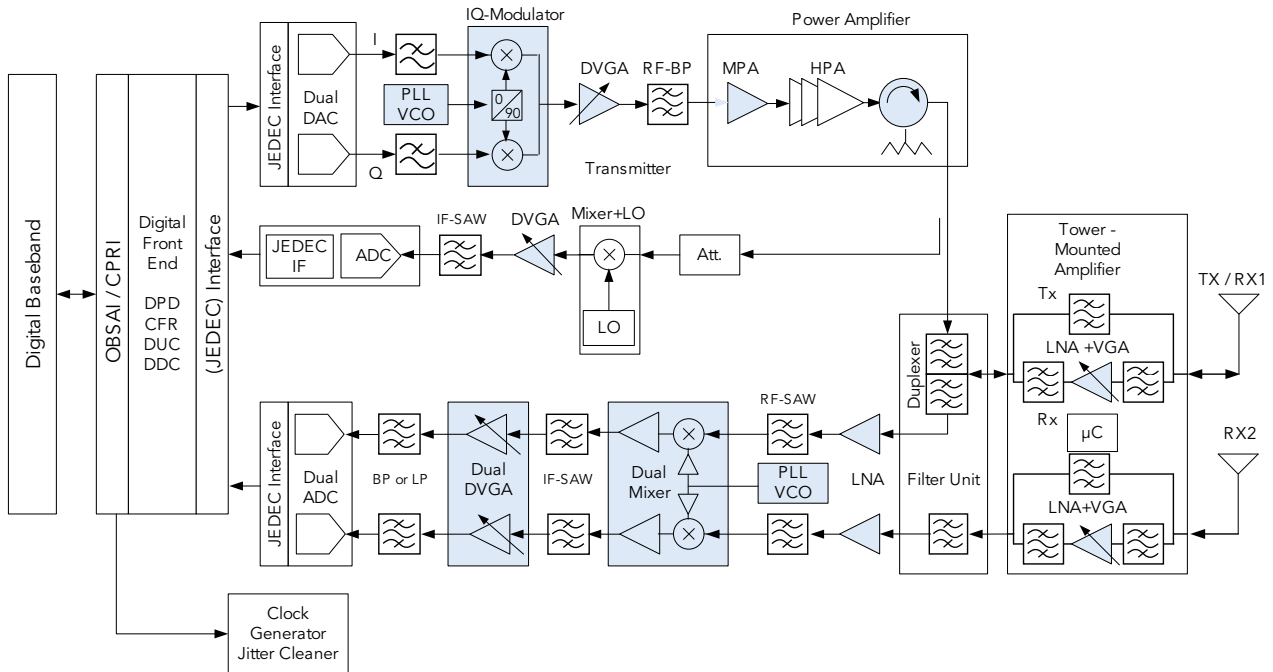

## 1.3 Wireless communication infrastructure

### 1.3.1 Base stations (all cellular standards and frequencies)

#### RF components for transmit line-ups and receive chains

As a global leader in RF technology and component design, NXP Semiconductors offers a complete portfolio of RF products, from low- to medium-power signal conditioning, that delivers advanced performance and helps simplify your design and the development process. Our solutions range from discretés and amplifiers (LNA, VGA, MPA) to mixers/oscillators.

#### Application diagram of base station showing Tx, Rx, and Tx feedback functions

Tx functions are in the upper region, Rx in the lower, and Tx feedback in the middle.

#### Product highlight: Base-station LNAs with ultra-low noise BGU805x [BTS1001x]

The BGU8051, BGU8052, and BGU8053 SiGe:C BiCMOS LNAs are designed to support high-performance communications systems from 300 up to 6000 MHz. Key enablers of maintaining sensitivity, even in adverse signal conditions, are high linearity (37 dB OIP3), ultra-low noise figures (e.g. 0.4 dB), and wideband S11<20 dB behavior. These ultra-low noise amplifiers enable 2G/3G/4G macro and micro base-station performance at unsurpassed value.

#### Features

- ▶ Three versions to cover low frequency (300 – 1500 MHz), mid frequency (1500 – 2500 MHz) and high frequency (2500 – 6000 MHz) ranges
- ▶ Very low Noise Figure 0.43 – 0.57 dB at a gain of 18 dB
- ▶ Very high linearity (1 dB compression point of 19dBm and IIP3 of 39 dBm) at 50 mA current consumption
- ▶ Supply voltage from 3.0 to 5.25 V
- ▶ Adjustable bias current through external resistor

### Product highlight: Digital VGAs BGA7204 and BGA7210 [BTS6001A]

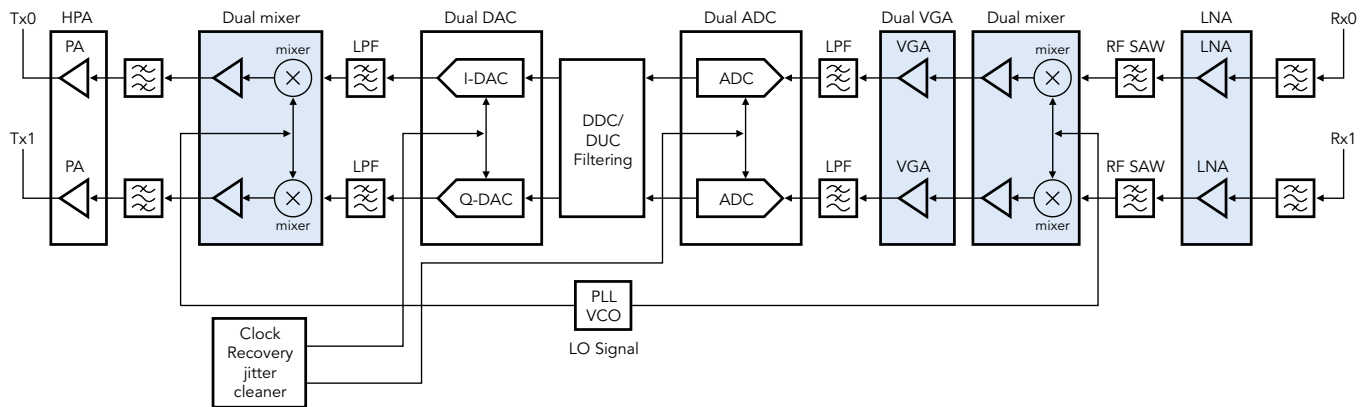

These 6-bit digital VGAs offer high linearity (35 dBm @ 2.2-2.8 GHz) and high output power (23 dBm @ 2.2-2.8 GHz) across a large bandwidth without external matching. Smart routing with no connection crosses simplifies design and decreases footprint by 25%. The unique power-save mode can effectively reduce the current consumption in TDD systems by up to 45%. The BGA7210 adds flexible current distribution across its two amplifiers, depending on the attenuation state, to save current.

### Features

- ▶ Internally matched for 50 Ω
  - BGA7204 = 0.4 to 2.75 GHz
  - BGA7210 = 0.7 to 3.8 GHz
- ▶ High maximum power gain
  - BGA7204 = 18.5 dB
  - BGA7210 = 30 dB
- ▶ Attenuation range of 31.5 dB, 0.5 dB step size (6 bit)
- ▶ Fast-switching power-save mode (power-down pin)
- ▶ Simple control interfaces (SPI)
- ▶ ESD protection on all pins (HBM 4 kV; CDM 2 kV)

## 1.3.2 Repeater

### Application diagram of the components used in a repeater system

For the complete product selection please see section 3.1.1, 3.1.2, 3.1.4 and 3.1.5

### Product highlight:

#### MMIC dual down-mixer BGX7221

The BGX7221 combines a pair of high-performance, high-linearity down-mixers for use in receivers that have a common local oscillator used with, for example, main and diversity paths. The device covers frequency bands from 1700 to 2700 MHz with an extremely flat behavior.

### Features

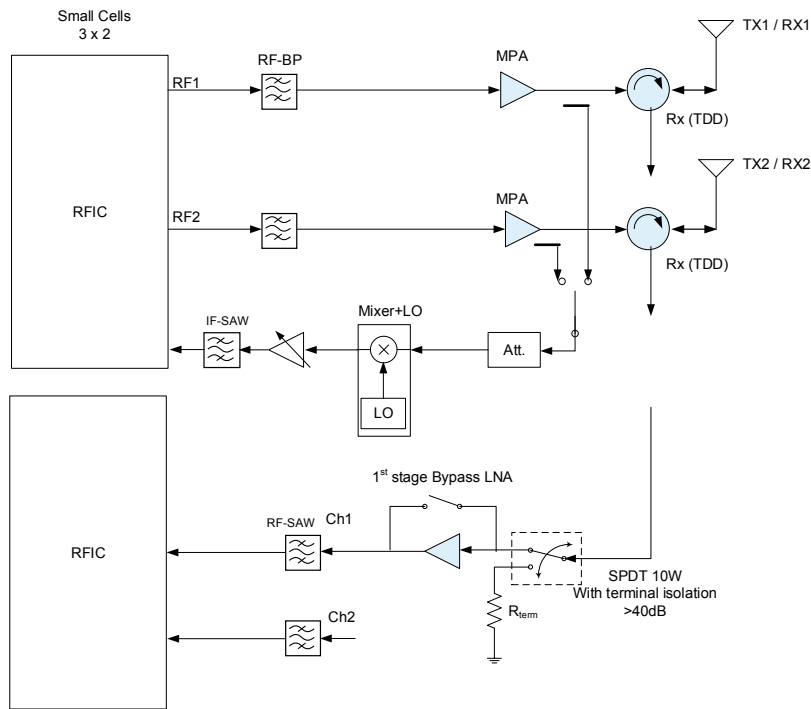

- ▶ 8.5 dB conversion gain over all bands
- ▶ 13 dBm input, 1 dB compression point
- ▶ 25.5 dBm input third-order intercept point
- ▶ 10 dB (typ) small-signal noise figure
- ▶ Integrated active biasing
- ▶ Single +5 V supply operation
- ▶ Power-down per mixer with hardware control pins
- ▶ Low bias current in power-down mode
- ▶ Matched 50 Ω single-ended RF and LO input impedances
- ▶ ESD protection at all pins

### 1.3.3 Small cells

With the explosion of cellular data usage and the limited number of sites available for new macro base stations, operators have to find new ways of offering high data rates and excellent quality of service. One of the options is to complement the macro network with small cells, known as picocells (1 to 2 W average) and femtocells (0.25 to 0.5 W average). NXP offers and develops several types of solutions to the small-cell PAs designer, optimized for performance, integration, or cost.

#### Application diagram of a typical small-cell line-up

#### Recommended product

For the complete product selection please see section 3.1.1

#### Product highlight: Integrated low-noise, high-linearity amplifier with bypass BGU806x [BTS3001x]

Building on the success of the ultra-low noise BGU805x series, the BGU8062x is a series of SiGe:C BiCMOS LNAs with integrated bypass and fast shutdown. The BGU806x is a perfect 3rd stage gain block in the Rx chain in wireless infrastructure applications. The high-performance bypass function enables high dynamic range, while the fast shutdown function makes it well suited for TDD applications. The BGU806x is housed in a 10-pin package that measures 3 x 3 mm.

#### Features

- ▶ Three versions to cover low frequency (700 – 1500 MHz), mid frequency (1500 – 2700 MHz) and high frequency (2500 – 4000 MHz) ranges
- ▶ Low Noise Figure ranging from 1.1 to 1.4 dB at a gain of 18.5 - 20.5 dB
- ▶ Very high linearity (1 dB compression point of ~20dBm and IIP3 of ~36 dBm) at 70-75 mA current consumption
- ▶ Performance optimized for a supply voltage of 5 V
- ▶ ESD protected on all pins
- ▶ 3 x 3 x 0.85 mm package with MSL = 1

## 1.4 Broadband communication infrastructure and TV

The increasing demand for bandwidth is very visible in broadband communication: fibers are moving closer to the home, and RF requirements are changing, due to the increased use of digital communication protocols. NXP offers a wide range of products which can be used in the network and in the home. For the network, we support fiber-optics with products for down- and upstream communication. For the home, we focus on down- and upstream communication for TVs, set-top boxes and access points-routers.

### 1.4.1 WLAN: access points and routers, fixed consumer electronics

#### Application diagram for WLAN

#### Recommended products

Function	Product	Gain @ 2.4GHz (dB)	Gain @ 5.5 GHz (dB)	NF (dB)	IIP3 (dBm)	Package	Type name

	MMIC	-	13.5	1.6	+8		BGU7258

For the complete product selection please see section 3.1.1 and 3.2.1

#### Product highlight:

#### WLAN LNAs with bypass BGU7224 and BGU7258

These fully integrated LNAs enable IEEE 802.11b/g/n/ac WLANs and ISM applications in the 2.4 and 5 GHz bands. Manufactured in our high-performance QUBiC4x SiGe:C technology, they combine best-in-class gain, noise figure, linearity, and efficiency with the process stability and ruggedness that SiGe technology is known for.

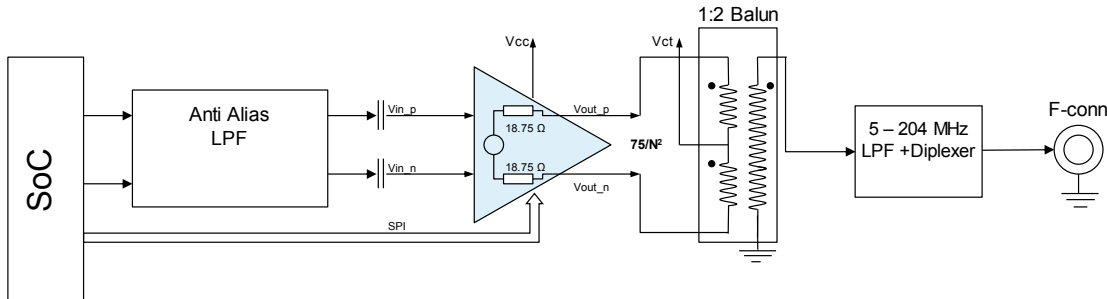

#### Features

- ▶ Fully integrated, high-performance LNA with built-in bypass (no external matching or DC blocking required)
- ▶ Noise figure (NF) of 1.0 dB (2.4 GHz) and 1.6 dB (5 GHz), with low current consumption of 13 mA
- ▶ Low bypass current of 2  $\mu$ A
- ▶ Single-supply operation from 3.0 to 3.6 V
- ▶ Integrated, temperature-stabilized bias network
- ▶ High ESD protection of 2 kV HBM on all pins
- ▶ Ultrasmall QFN-style package (1.6 x 1.6 x 0.5 mm, 0.5 mm pitch), MSL 1 at 260 °C

## 1.4.2 Cable modem and set-top boxes based on DOCSIS 3.0 & 3.1

DOCSIS, the cable-modem standard from the CableLabs research consortium, supports IP traffic over digital cable-TV channels. For the upstream path NXP offers two solutions: the BGA3131 for the new DOCSIS 3.0 standard and the requirements set by their respective standards. The BGA3131 has a very low power consumption which eliminates the need for a costly external heatsink.

### Application diagram of a DOCSIS cable modem with the BGA3031 upstream amplifier

### Recommended products

Function	Product	Frequency range (MHz)	Gain (dB)	$P_{L, 1dB}$ (dBmV)	Package	Type name
Upstream VGA for DOCSIS 3.0	MMIC	5 - 85	34	74	SOT662	BGA3031
Upstream VGA for DOCSIS 3.1	MMIC	5 - 205	37	78	SOT662	BGA3131

For the complete product selection please see section 3.1.3

### Product highlight:

#### DOCSIS 3.1 upstream amplifier BGA3131 [BTS6031]

The BGA3131 MMIC is an upstream amplifier designed for the Data Over Cable Service Interface Specifications (DOCSIS 3.1) operating from 5 to 205 MHz. It meets the DOCSIS 3.1 specification at a best-in-class current consumption of 660 mA, eliminating the need for an expensive heatsink. The device provides can amplify DOCSIS 3.0 (QAM modulated signals) and DOCSIS 3.1 (OFDM modulated signals) up to an output level of 68 dBmV while meeting all the IMD, harmonics, ACLR and transient requirements.

### Features

- ▶ 3-wire SPI control interface
- ▶ 58 dB gain control range, 1 dB steps with 0.4 dB gain step accuracy
- ▶ 5 MHz to 205 MHz frequency operating range
- ▶ Maximum voltage gain 37 dB, 6.5 dB noise figure
- ▶ Excellent linearity at 68 dBmV output power (IMD3 = 60 dBc, second & third harmonic level = 60 dBc, ACLR = 64 dBc)
- ▶ 5 V single supply operation
- ▶ ESD protection at all pins

### 1.4.3 Network Interface Module (NIM) for TV reception

#### Make a high-performance active splitter in a NIM tuner with the BGU703x/BGU704x

Today's TV tuners require complicated signal handling and benefit from flexibility in design. The front-end of a TV signal receiver is no longer just a tuned receiver, but has evolved into an RF network interface module (NIM) with tuned demodulators, active splitters, and remodulators. The active splitter requires an LNA with excellent linearity. NXP has two series of LNA/VGA MMICs (BGU703x/BGU704x), designed especially for high linearity (IP3O of 29 dBm) in low-noise applications such as an active splitter in a NIM tuner. The BGU703x family operates at a supply voltage of 5 V and is intended for use with conventional can tuners. The BGU704x family operates at 3.3 V and works seamlessly with Si tuner ICs, which also operate at 3.3 V.

#### Application diagram of an STB input stage with improved NF performance using the BGU703x and BGU704x

#### Recommended products

Function	Product	Supply voltage (V)	Gain (dB)	NF (dB)	Package	type name

#### Product highlight:

#### VGAs for TVs/STBs BGU703x and BGU704x

Designed for high linearity and low noise, these 3.3 and 5 V wideband VGAs support multi-tuner applications in TVs, DVR/PVRs, and STBs operating between 40 MHz and 1 GHz. A unique programmable gain with bypass mode compensates for tuner switch signal loss (important in multi-tuner systems), and improves overall system performance by 7 to 10 dB.

#### Features

- ▶ Flat gain between 40 MHz and 1 GHz
- ▶ Output power at 1 dB gain compression ( $P_{L(1\text{dB})}$ ) ranging from 9 to 14 dBm
- ▶ Noise figure as low as 2.8 dB
- ▶ High linearity with an OIP3 of 29 dBm
- ▶ 75  $\Omega$  input and output impedance
- ▶ Power-down during bypass mode
- ▶ ESD protection >2 kV HBM, >1.5 kV CDM on all pins

## 1.4.4 Optical mini- and midi-node line-up

We provide a complete system solution for optical mini- and midi-node line-ups, for use in systems that take the broadband TV signal from an optical network and amplify the signal onto a coaxial distribution network. Depending on the placement of the node, this might go straight into a home (FTTH), an apartment building (FTTB), or deeper in the network (FTTC).

### Application diagram of an MMIC broadband amplifier for TV and distribution systems

### NXP delivers all the components for optical mini- and midi-node line-ups, for FTTH applications:

- ▶ BGA301x input stages are LNAs that keep overall noise low
- ▶ BGA302x MPAs deliver high output power with excellent overall performance
- ▶ The BAP70Q PIN diode enables an adjustable-gain control circuit

### Recommended products

Function	Product	$V_R$ max (V)	IF max (mA)	$r_o$ ( $\Omega$ ) @ IF=10 mA	Package	Type name

			20					BGA3023

For the complete product selection please see section 3.1.2 and 3.3.2

### Product highlight:

#### MMIC wideband amplifiers with internal biasing BGA302x

These are MPAs, specifically designed as the output stage for high-linearity CATV optical mini- and midi-nodes. They operate over a frequency range of 40 to 1200 MHz, and are housed in a lead-free HSO8 package.

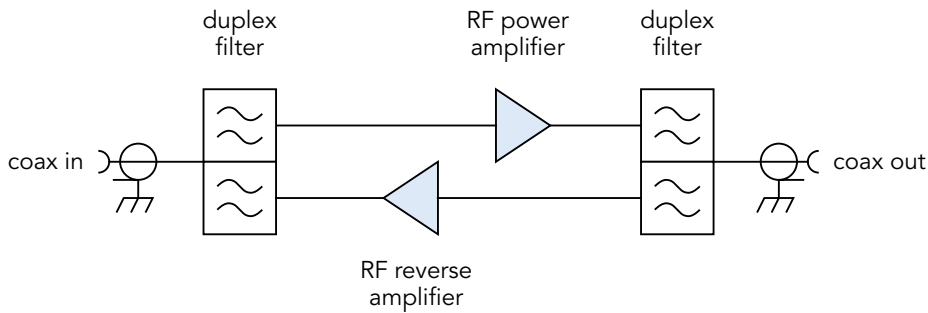

### Features

- ▶ Internally biased
- ▶ Flat gain between 40 and 1200 MHz
- ▶ High linearity with an IP3o of 46 dBm and an IP2o of 75 dBm
- ▶ High gain output 1dB compression point of 30 dBm
- ▶ 75  $\Omega$  input and output impedance
- ▶ Icc (total) can be controlled between 175 and 350 mA

## 1.4.5 Broadband line extenders

Larger coaxial distribution networks often require longer distances and additional amplification. Our broadband solutions are ideally suited for use in bidirectional line extenders.

### Application diagram of a bidirectional line extender

### Recommended products

Function	Product	Frequency (MHz)	Gain (dB)	NF(dB)	Package	Type name
RF forward amplifier	Drop amplifier	1006	12	3.1	SOT89	BGA3012
			15	2.5	SOT89	BGA3015
			18	2.2	SOT89	BGA3018

Function	Product	Frequency range (MHz)	Gain (dB)	P1dB (dBm)	Package	Type name
RF reverse amplifier	Drop amplifier	5 - 300	12	22.5	SOT89	BGA3012
			15	23.5	SOT89	BGA3015
			18	24.5	SOT89	BGA3018

For the complete product selection please see section 3.1.2

### Product highlight: Extreme-broadband amplifiers BGA301x

The BGA3012, BGA3015, and BGA3018 are extreme-broadband amplifiers that deliver 12, 15, and 18 dB of gain from 40 to 1006 MHz, while providing outstanding linearity performance. These amplifiers can also be used as a return path amplifier from 5 to 300 MHz, or in a combined TV and satellite system from 40 to 2600 MHz. At the low end of the frequency band, these amplifiers outperform competing GaAs

devices in noise figure performance by 5 dB and in input power rating by more than 20 dB, while offering a superior ESD rating of 2 kV and a larger supply voltage operating range of 5 to 8 V. These amplifiers are very well suited for various broadband TV distribution system applications, such as FFTH, home gateways, and set-top boxes.

## 1.5 Satellite

### 1.5.1 Satellite outdoor unit, QUAD LNB with integrated mixer/oscillator/downconverter/switch matrix

#### Application diagram of a QUAD LNB

#### Recommended products

For the complete product selection please see section 3.1.5 and 3.2.1

#### Product highlight:

#### World's first fully integrated Quad Ku-band to L-band downconverter IC TFF1044HN

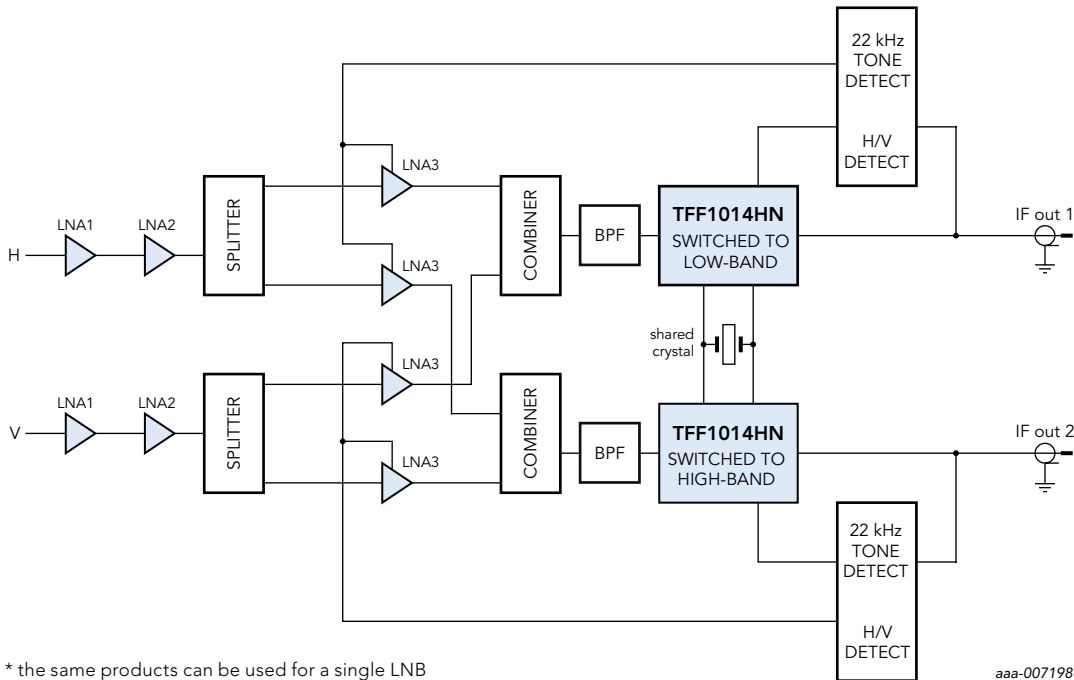

This universal Quad DVB-S/DVB-S2 compliant Ku-band downconverter enables significant size reduction for Quad or Quattro LNB's. It reduces total costs, since it enables alignment-free production, and significantly decreases manufacturing time, since it's fully tested.

#### Features

- ▶ Integrated voltage/tone detection, 4 x 4 matrix switch
- ▶ Low current consumption (I<sub>cc</sub> = 170 mA for 4 users active)
- ▶ Low Phase Noise (1.6 degrees RMS PJ typ)
- ▶ Selectable gain (30, 33, 36 dB)
- ▶ Small PCB footprint – HVLGA36 (5.0 x 5.0 x 0.72 mm) – low external component count

## 1.5.2 Satellite outdoor unit, twin LNB with integrated mixer/oscillator/downconverter

### Product highlight: Industry's lowest-power integrated Ku-band downconverters TFF101xHN

These Universal DVB-S compliant Ku-band downconverters consume about 50% less current (52 mA) than other integrated solutions. They are fully integrated (PLL synthesizer/mixer/IF gain block) and RF tested – which results in significantly decreased manufacturing time. Stability of the local oscillator is guaranteed, which improves overall system reliability over temperature and time, and eliminates the need for manual alignment in production.

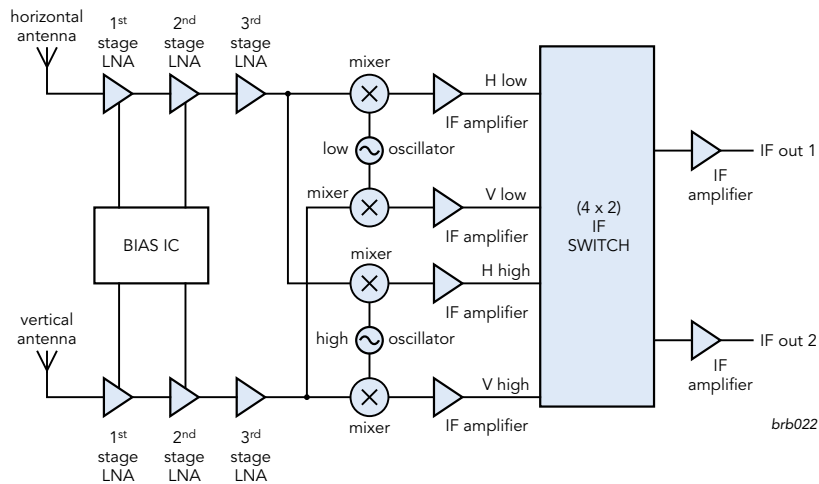

### Features

- ▶ Ultralow current consumption (I<sub>cc</sub> = 52 mA)
- ▶ Low phase noise (1.5° RMS typ)
- ▶ Integration bandwidth from 10 kHz to 13 MHz
- ▶ Small PCB footprint
  - DHVQFN16 package (2.5 x 3.5 x 0.85 mm)
  - Only seven external components
  - No inductors necessary

### Product highlight:

#### NPN wideband SiGe RF transistor BFU910F

The BGU910F is a wideband RF transistor produced in the QUBIC GEN9 process for K-band applications (10 – 20 GHz). QUBiC GEN9 has been optimized towards extremely low noise figures in this frequency range. Typical applications are first, second or third stage amplifiers in satellite LNBs. The BFU910 can be used to replace GaAs devices giving the benefits of more robustness, single biasing and low current consumption in combination with an excellent RF performance.

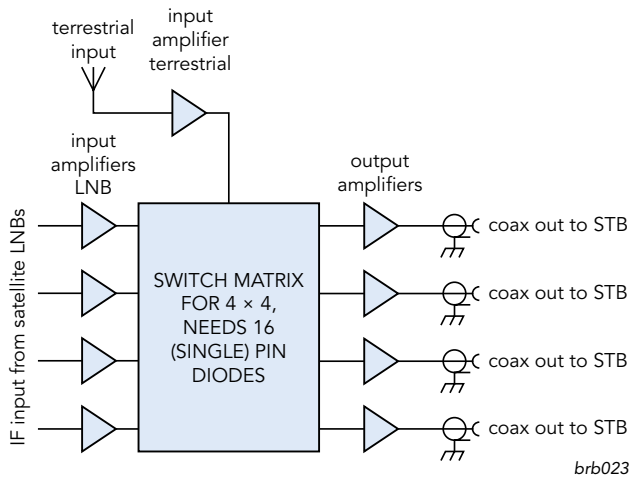

### Features

- ▶ Low noise, high gain microwave transistor with 90 GHz fT
- ▶ High maximum stable gain of 14.2 dB at 12 GHz
- ▶ Minimum noise figure (NF) of 0.65 dB at 12 GHz
- ▶ Current consumption 10 mA typical

### Product highlight:

#### NPN wideband SiGe RF transistor BFU730F

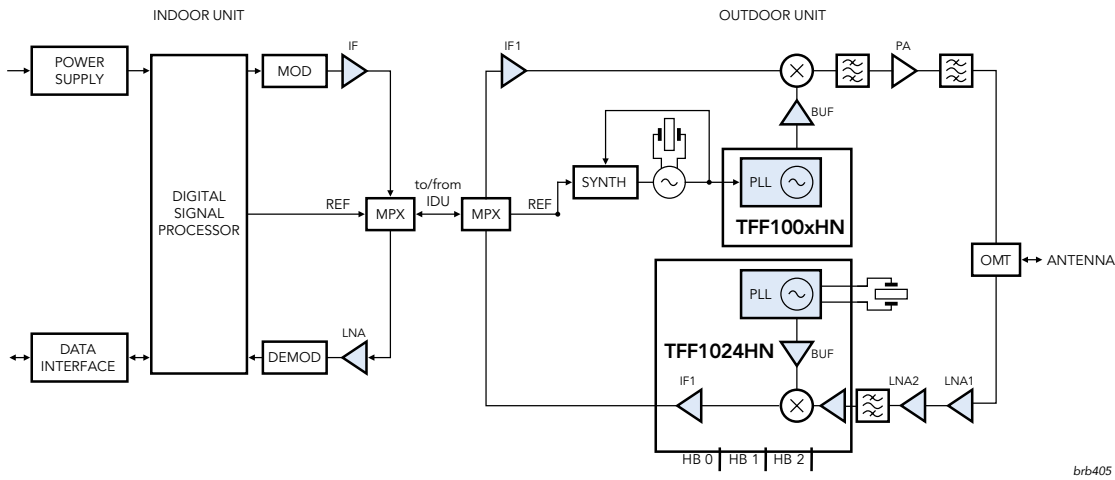

The BFU730F is part of the family of 6th (Si) and 7th (SiGe:C) generation RF transistors and can be used to perform nearly any RF function. These next-generation wideband transistors offer the best RF noise figure versus gain performance, drawing the lowest current. This performance allows for better signal reception at low power and enables RF receivers to operate more robustly in noisy environments.

### Features

- ▶ Operates at 2.3 GHz
- ▶ High maximum power gain (G<sub>p</sub>) of 17.6 dB
- ▶ Noise figure (NF) of 0.8 dB
- ▶ Input 1dB gain compression (P<sub>1(dB)</sub>) of -15 dBm
- ▶ Input third-order intercept point IP<sub>3</sub> of +4.7 dBm

#### Product highlight:

#### Downconverter with PLL/VCO for VSAT TFF1024HN

This VSAT Ku-band downconverter consumes about 35% less current (60 mA) than other integrated solutions. It's fully integrated (PLL synthesizer/mixer/IF gain block) and RF tested – which results in significantly decreased manufacturing time. Unlike dielectric resonance oscillators, which are mechanical components, the PLL-based TFF1024HN guarantees stable performance over lifetime and temperature, enabling high Service (QoS) for end-users. This downconverter operates at eight of the most-used Ku sub-bands using only one crystal.

#### Features

- ▶ Switched LO frequency
  - Eight selectable frequencies from 9.75 to 11.30 GHz
  - More LO frequencies obtainable with different Xtal values
- ▶ Ultralow current consumption ( $I_{cc} = 60$  mA)
- ▶ Low phase noise (1.0° RMS typ)
  - 10 kHz to 13 MHz integration bandwidth
- ▶ Flat gain over frequency (< 2 dBpp)
- ▶ High linearity of > 16 dBm IP3o
- ▶ High P1dB0 > 6 dBm

## 1.6 Generic RF front-end for IOT

In a typical RF front-end, RF signals are received and transmitted anywhere in the range of DC to 20 GHz. All our wideband SiGe amplifiers can be used for high-speed, low-noise applications along this entire spectrum. Because our wideband transistors are so versatile, they are used in a broad range of functions and are an especially good choice for cost-sensitive applications that also need flexibility. In LNA applications, they support GPS, satellite radio, cordless phones, and WLAN. They also enable oscillators and drivers in consumer, ISM, and automotive applications. Many designers use varicap diodes principally as voltage-variable capacitors, with the diode function a secondary option, but these devices are ideally suited for use as VCOs in ISM-band applications.

#### PNP wideband Si RF transistor BFU520x

Supporting broadband amplifiers up to 2 GHz, LNAs for ISM applications, and ISM-band oscillators, the BFU520X delivers high speed and low noise in a plastic, 4 inch, dual-emitter SOT143B package.

### Features

- ▶ Low-noise, high-breakdown RF transistor
- ▶ AEC-Q101 qualified
- ▶ Minimum noise figure (NFmin) = 0.7 dB at 900 MHz
- ▶ Maximum stable gain of 20 dB at 900 MHz
- ▶ 11 GHz fT silicon technology

## 1.7 Automotive

NXP is very active in the automotive market and is present in nearly every automotive application that uses RF. The examples in this section provide evidence that our portfolio covers all the key RF functions typically used in cars.

We recently expanded our portfolio by adding the BFU5x0 series, a new generation of best-in-class, AEC-Q101 qualified wideband transistors. Each BFU5x0 device has a different drain current and is available in up to six different packages, ranging from very small to ultrasmall. Overall, the series delivers ultra-low noise, very high breakdown voltage, and a maximum stable gain of 18 dB at 900 MHz.

### 1.7.1 Remote Keyless Entry (RKE), RF generic front-end with dedicated antenna for reception and transmission

With an RKE system, drivers can lock or unlock a vehicle by using a key fob equipped with a transmitter that sends data to a receiver in the vehicle. In the Tx chain, the driver and PA play major roles in ensuring a long range and accurate transmission. In the Rx chain, a discrete LNA is often used to ensure efficiency and security. We offer a wide selection of VCOs, drivers, and PAs that let the designer build the right configuration for their application.

#### Product highlight: MMIC wideband amplifier BGU6101

The BGU6101 is an unmatched MMIC featuring an integrated bias-enable function and a wide supply voltage. It is part of a family of three products (BGU6101, BGU6102, BGU6104), and is optimized for 2 mA operation.

#### Features

- ▶ Applicable between 40 MHz and 6 GHz
- ▶ 13 dB gain and 0.8 dB NF at 450 MHz
- ▶ 50  $\Omega$  FM LNA: 15 dB gain and 1.4 dB NF at 100 MHz
- ▶ Integrated, temperature-stabilized bias for easy design
- ▶ Bias current configurable with external resistor
- ▶ Power-down mode current consumption < 1  $\mu$ A
- ▶ ESD protection > 1 kV HBM on all pins

## 1.7.2 Tire-pressure monitoring system

Tire-pressure monitoring systems use a transmitter similar to that of an RKE system (see section 1.6.2). Range and accuracy are a must, so discrete drivers and/or PAs are mandatory. NXP offers a wide selection of VCOs, drivers, and PAs that support these requirements.

### Product highlight: NPN wideband silicon RF transistors BFU5xx

The BFU5xx transistor family is designed for applications up to 2 GHz such as communication, and automotive and industrial equipment. Due to the high gain at low supply current, these devices are also a good choice for battery-powered systems. All are available in multiple, small form-factor packages that ease design-in.

### Features

- ▶ Low-noise, high-breakdown RF transistor
- ▶ AEC-Q101 qualified
- ▶ Minimum noise figure (NFmin) = 0.7 dB at 900 MHz
- ▶ Maximum stable gain of 18 dB at 900 MHz
- ▶ 11 GHz fT silicon technology

## 1.7.3 SDARS and HD radio

In a Satellite Digital Audio Radio Service (SDARS) system equipped with an active-antenna LNA, a BFU730F wideband transistor can drive the first stage in a three-stage SIRIUS LNA chain, while the BFU690F can drive the second and third stages.

### Application diagram of an SDARS Active Antenna LNA - 2320-2332.5 (SIRIUS, 3 stages)

#### Product highlight: IF gain blocks BGA28xx

These MMIC wideband amplifiers are equipped with internal matching circuitry and are housed in a 6-pin SOT363 plastic SMD package.

#### Features

- ▶ No output inductor necessary when used at the output stage
- ▶ Internally matched to 50 Ω
- ▶ Reverse isolation > 30 dB up to 2 GHz
- ▶ Good linearity with low second- and third-order products
- ▶ Unconditionally stable ( $K > 1$ )

# INSPIRING RF SOLUTIONS

Our broad portfolio and **collaborative** approach help you advance your RF designs for a smarter world.

# 2. Technologies

## 2.1 Looking for a leader in SiGe:C? You just found us!

NXP's QUBIC BiCMOS SiGe:C technology enables future generations of RF products – including low-noise amplifiers, medium-power amplifiers, and local oscillator (LO) generators – to operate at higher performance levels, including higher frequency and higher integration. Use cases include increasing the performance of base stations, mobile phones, and other mobile platforms, along with equipment for communications infrastructure. The QUBIC process also helps speed satellite tracking and better connectivity with GPS signals for GPS systems, enhances satellite, WLAN, and microwave radio applications, strengthens performance in radar, and more.

### Excellent RF signal quality and more functionality in one design

Silicon-germanium (SiGe) process technology-based QUBIC offers high RF performance at a competitive cost, while ensuring excellence in signal quality via robust, highly integrated functionalities and value-added solutions. This in-house process builds on mature processes that have been in mass production since 2002. The QUBIC process can integrate more functionality onto devices at a smaller footprint and with greater reliability and manufacturing efficiency, offering a clear competitive advantage to our customers.

### More than an alternative

QUBIC delivers several benefits. It achieves RF performance comparable to GaAs for linearity, noise figure, and phase noise. It also provides higher robustness and reliable design (active ESD protection), and offers the option to integrate dense analog circuitry and digital control on the same mixed-signal IC. SiGe also offers lower DC power consumption. It allows wireless equipment manufacturers to add more functionality onto devices with less space, at a competitive cost, and with greater reliability and manufacturing efficiency. With QUBIC, customers can speed their migration from GaAs technology to silicon by enabling cutting-edge, low-noise performance and IP availability. QUBiC comes in five variants (Gen6 through Gen10), each with its own optimization for specific application areas.

### QUBIC Gen6

The QUBIC Gen6 process features 0.25  $\mu\text{m}$  CMOS with five metal layers for integration of dense digital logic-based smart functionality, and a rich set of active and passive devices for high-frequency mixed-signal designs, including thick top metal layers for high-quality inductors. The device set includes 35 GHz  $f_T$  implanted base Si double poly NPNs with 3.8 V breakdown voltage ( $BV_{\text{CEO}}$ ) and low noise figure ( $\text{NF} < 1.1 \text{ dB @ } 2 \text{ GHz}$ ), 5 GHz  $f_T$  VPNNs, a 28 GHz high-voltage NPN with 5.9 V breakdown voltage, differential and single-ended varicaps with Q-factor  $> 30$ , scalable inductors with Q-factor  $> 20$ , 800 MHz  $f_T$  lateral PNPs, 137, 220, and 12 to 2000  $\Omega/\text{sq}$ . poly and active resistors, a 270  $\Omega/\text{sq}$ . SiCr thin film resistor, a 5.7  $\text{fF}/\mu\text{m}^2$  oxide capacitor and a 5  $\text{fF}/\mu\text{m}^2$  MIM capacitor, one to six  $\text{fF}/\mu\text{m}^2$  oxide capacitors, and various other devices, including isolated NMOS, and optional 3.3 V CMOS and RF-CMOS transistors. The QUBIC Gen6 process is ideal for applications up to 5 GHz.

### QUBIC Gen7RF (QUBIC Gen7)

The QUBIC Gen7 process is a SiGe:C-based extension of the QUBIC process for high-frequency mixed-signal designs and offers a rich set of transistor devices, including a 110 GHz  $f_T$  NPN with 2.0 V breakdown voltage ( $BV_{\text{CEO}}$ ) and very low noise figure ( $\text{NF} < 1.0 \text{ dB @ } 10 \text{ GHz}$ ), a 60 GHz  $f_T$  NPN with 3.1 V  $BV_{\text{CEO}}$ , 0.25  $\mu\text{m}$  CMOS, a variety of resistors, a 5.7  $\text{fF}/\mu\text{m}^2$  oxide capacitor, and a 5  $\text{fF}/\mu\text{m}^2$  MIM capacitor. QUBIC Gen7 is ideal for applications that typically operate at up to 30 GHz, such as wireless infrastructure, satellite communications, and point-to-point or wireless connectivity.

### QUBIC Gen8RF (QUBIC Gen8)

The QUBIC GEN8 process further enhances the QUBIC Gen7 process. It offers 200 GHz  $f_T / 1.5 \text{ V } BV_{\text{CEO}}$  NPNs and offers ultra-low noise figure ( $\text{NF} < 0.6 \text{ dB @ } 10 \text{ GHz}$ ), 90 GHz  $f_T / 2.5 \text{ V } BV_{\text{CEO}}$  NPN, 0.25  $\mu\text{m}$  CMOS, several resistors, a 5.7  $\text{fF}/\mu\text{m}^2$  oxide capacitor and a 5  $\text{fF}/\mu\text{m}^2$  MIM capacitor. QUBIC Gen8 is ideal for applications operating at high frequencies ( $> 20 \text{ GHz}$ ), such as wireless infrastructure point-to-point, car radar, and aerospace, but also offers extremely low noise in the 1 - 2 GHz range. A recent process update provides high-power devices for use in applications that require high output power and high linearity. This Extended High Voltage device combines high breakdown capabilities with high speed. The  $BV_{\text{CEO}}$  is increased to 4 V and the  $BV_{\text{CBO}}$  equals 18 V. The  $f_T / f_{\text{max}}$  of this optional device is 50 / 160 GHz.

### QUBIC Gen9RF

The latest release of the QUBIC family provides best-in-class noise figures at millimeter wave frequencies. The latest generation is optimized for NFmin, which is measured at 0.27 dB at 2 GHz, 0.35 dB at 5 GHz, and 0.49 dB at 10 GHz.

### QUBIC Gen10

QUBIC Gen10 is tailored to medium power applications in the cellular and small cell domain. It offers a 40 GHz and 130 GHz  $f_{\text{max}}$  high power NPN with excellent high breakdown voltages (4.5V and 17V for  $BV_{\text{CEO}}$  resp.  $BV_{\text{CBO}}$ ). The process offers also a general purpose NPN with a 100 GHz  $f_T$  and 83 GHz  $f_{\text{max}}$ . The technology comes with a 6 metal layer back-end including two thick top metal layers of 3 $\mu\text{m}$  and one moderate layer of 1 $\mu\text{m}$ , next to larger inter metal layer distance compared to previous QUBIC generations. The MIM capacitor has been optimized for power handling having a 3.4 $\text{fF}/\mu\text{m}^2$  density.

## 2.2 High-performance, small-size packaging

NXP's high-performance, small-size packaging, enabled by NXP's leadless package platform and WL-CSP technology

### RF small-signal packaging is driven by two major trends which partly overlap

- ▶ Lower parasitics for better RF performance
- ▶ Smaller form factors for portable applications

### To cope with these trends, NXP uses several approaches

- ▶ For non-space-restricted applications, the use of flat-pack packages instead of gull-wing versions reduces the parasitic impedance because of shorter lead length (e.g. SOT343F instead of SOT343). This results in better RF performance in the Ku and Ka bands (13 to 20 GHz).

SOT343

SOT343F

SOT1230

SOT1232

- ▶ For space-restricted applications, there are two ways to reduce the form factor and parasitics:
  - Leadless package platform
  - Wafer-Level Chip-Scale Package (WL-CSP) technology

The **leadless package platform** (>25 variants already released) is highly flexible with respect to package size, package height, and I/O pitch. For example, the 6-pin packages range in size from 1.45 x 1 x 0.5 mm with 0.5 mm pitch to 0.8 x 0.8 x 0.35 mm with 0.3 mm pitch.

Because of the compact size of the design, wire lengths and parasitic impedance are also restricted. The absence of leads further reduces the inductance.

**Wafer-Level Chip-Scale Package technology** is ideal for RF functions where the I/O pitch fits within the chip area. With smaller designs (and thus little effective chip area), it is more difficult to apply these on board due to smaller I/O pitches. Such small functions can now be flipped inside the SOT1232 package and still be mounted like a normal leadless package with 0.4 mm pitch. The absence of wires gives the lowest parasitic inductance available.

SOT886

SOT891

SOT1208

0.65 x 0.44 x 0.29 mm (including 0.09 mm balls)  
5 I/Os @ 0.22 mm pitch

# ENHANCING RF PERFORMANCE

NXP has a **proven** record in delivering the best RF performance.  
That's why half of all satellite solutions use NXP components.  
RF for a smarter world.

# 3. Products by function

## 3.1 RF ICs

### Why choose NXP's RF MMIC amplifiers and mixers:

- ▶ Reduced RF component count
- ▶ Easy circuit design-in
- ▶ Reduced board size
- ▶ Short time-to-market
- ▶ Broad portfolio
- ▶ Volume delivery
- ▶ Short lead time

### 3.1.1 Low noise amplifiers

### 3.1.5 Modulators, mixers, PLL and downconverters

#### Why choose NXP's low-noise LO generators:

- ▶ Lowest total cost of ownership
- ▶ Alignment-free concept
- ▶ Easy circuit design-in
- ▶ Improved LO stability

#### IQ modulators for wireless infrastructure

Type name	Package	V <sub>cc</sub> (V)	f <sub>LO</sub> (MHz)	I <sub>cc</sub> (mA)	f <sub>LO</sub> (MHz)	P <sub>o</sub> (dBm)	BW <sub>mod</sub> (MHz)	N <sub>flr(i)</sub> (dBm/Hz)*	P <sub>L,1dB</sub> (dBm)	IP2 <sub>o</sub> (dBm)	IP3 <sub>o</sub> (dBm)	SBS (dBm)	CF (dBm)

## 3.2 RF bipolar transistors

### 3.2.1 Wideband transistors

RF wideband transistor selection guide on [www.nxp.com/rftransistors](http://www.nxp.com/rftransistors)  
Easy-to-use parametric filters help you choose the right RF wideband transistor for your design.

#### Why choose NXP's wideband transistors:

- ▶ Broad portfolio (1<sup>st</sup> - 7<sup>th</sup> generation)
- ▶ Short lead time
- ▶ Smallest packages
- ▶ Volume delivery

#### Wideband transistors

The  $f_T$ - $I_C$  curve represents transition frequency ( $f_T$ ) characteristics as a function of collector current ( $I_C$ ) for the seven generations of RF wideband transistors. A group of transistors having the same  $I_C$  and similar  $f_T$  represents a curve. The curve number matches the products in the selection tables of this section (third column of each table), detailing their RF characteristics.

#### Wideband transistor line-ups by frequency

## 3.3 RF diodes

### 3.3.1 Varicap diodes

Varicap selection guide on [www.nxp.com/varicaps](http://www.nxp.com/varicaps)  
Easy-to-use parametric filters help you choose the right varicap for your design.

#### Why choose NXP's varicap diodes:

- ▶ Reference designs for TV and radio tuning
- ▶ Direct matching process
- ▶ Small tolerances
- ▶ Short lead time
- ▶ Complete portfolio covering broad range of frequencies and packages (including leadless)
- ▶ Reliable volume supply

#### VCO and FM radio tuning varicap diodes

Type	Package	Number of diodes	Config	@ f = 1 MHz					r <sub>s</sub> typ Ω	r <sub>s</sub> max Ω	@ f = MHz
				C <sub>d1</sub> typ pF	@ V <sub>R</sub> = V	C <sub>d2</sub> typ pF	@ V <sub>R</sub> = V	C <sub>d1</sub> /C <sub>d2</sub> typ			
BB145B	SOD523	1	SG	6.8	1	2.75	4	2.5	-	0.6	470
BB156	SOD323	1	SG	16	1	4.8	7.5	2.5	0.4	0.7	470
BB201	SOT23	2	CC	95	1	27.6	7.5	3.4	0.25	0.5	100
BB202 <sup>^</sup>	SOD523	1	SG	30.9	0.2	9.2	2.3	3.4	0.35	0.6	100
BB207*	SOT23	2	CC	81	1	27.6	7.5	2.9	0.2	0.4	100
BB208-02*	SOD523	1	SG	21.6	1	4.9	7.5	4.4	0.35	0.5	100
BB208-03*	SOD323	1	SG	21.6	1	4.9	7.5	4.4	0.35	0.5	100

\* Includes special design for FM car radio (CREST-IC:TEF6860)

Type of connection: CC = common cathode

<sup>^</sup> Includes special design for mobile phone tuner ICs

SG = single

#### UHF varicap diodes

Type	Package	@ f = 1 MHz					r <sub>s</sub> typ (Ω)	r <sub>s</sub> max (Ω)	@ f = (MHz)
		C <sub>d1</sub> typ (pF)	@ V <sub>R</sub> = (V)	C <sub>d2</sub> typ (pF)	@ V <sub>R</sub> = (V)	C <sub>d1</sub> /C <sub>d2</sub> typ			
BB174	SOD523	19	1	2.1	28	9.0	0.6	0.75	470
BB135	SOD323	20	0.5	1.9	28	9.5	-	0.75	470

#### VHF varicap diodes

Type	Package	@ f = 1 MHz					r <sub>s</sub> typ (Ω)	r <sub>s</sub> max (Ω)	@ f = (MHz)
		C <sub>d1</sub> typ (pF)	@ V <sub>R</sub> = (V)	C <sub>d2</sub> typ (pF)	@ V <sub>R</sub> = (V)	C <sub>d1</sub> /C <sub>d2</sub> typ			
BB170	SOD323	39.3	1	2.6	28	15	-	0.9	100
BB171	SOD323	57.0	1	2.7	28	21	1	1.2	100
BB172	SOD323	38.5	1	2.6	28	15	0.65	0.8	100
BB173	SOD523	38.5	1	2.6	28	15	0.65	0.8	100
BB175	SOD523	57.0	1	2.7	28	21	1	1.2	100

BB181	SOD523	12.5	0.5	0.9	28	14	-	3	470
BBY40	SOT23	29.0	3	5.1	25	6	-	0.7	200

### 3.3.2 PIN diodes

PIN diode selection guide on [www.nxp.com/pindiodes](http://www.nxp.com/pindiodes)  
 Easy-to-use parametric filters help you choose the right PIN diode for your design.

#### Why choose NXP's PIN diodes:

- ▶ Broad portfolio
- ▶ Unrivalled performance
- ▶ Short lead time
- ▶ Low series inductance
- ▶ Low insertion loss
- ▶ Low capacitance

For more information: [www.nxp.com/pindiodes](http://www.nxp.com/pindiodes)

#### PIN diodes: selection on isolation and insertion loss in SOD882D

Type	ISL (isolation)			IL (Insertion loss)											
	f = 900 MHz	f = 1800 MHz	f = 2450 MHz	f = 900 MHz				f = 1800 MHz				f = 2450 MHz

### 3.3.3 Band-switch diodes

Band-switch diode selection guide on [www.nxp.com/products/diodes](http://www.nxp.com/products/diodes)  
Easy-to-use parametric filters help you choose the right Band-switch diode for your design.

#### Why choose NXP's band-switch diodes:

- ▶ Reliable volume supplier
- ▶ Short lead time
- ▶ Low series inductance
- ▶ Low insertion loss
- ▶ Low capacitance
- ▶ High reverse isolation

Type	Package	$V_R$ max (V)	IF max (mA)	$r_D$ max ( $\Omega$ )	@ IF = (mA)	@ f = (MHz)	$C_d$ max (pF)	@ $V_R$ = (V)	@ f = (MHz)

## 3.4.2 MOSFETs

RF MOSFET selection guide on [www.nxp.com/rffets](http://www.nxp.com/rffets)

Easy-to-use parametric filters help you choose the right RF MOSFET for your design.

### Why choose NXP's MOSFETs:

- ▶ Reference designs for TV tuning
- ▶ Short lead time
- ▶ Broad portfolio
- ▶ Smallest packages
- ▶ 2-in-1 FETs for tuner applications
- ▶ Reliable volume supply
- ▶ Highest performing MOSFETs for TV tuning

### N-channel, single MOSFETs for switching

Type	Package	$V_{DS}$ (V)	Characteristics									MODE
			$I_b$ (mA)	$I_{DSS}$ (mA)		$V_{GS(th)}$ (V)		$R_{DS(on)}$ ( $\Omega$ )	$ S_{21(on)} _2$ (dB)		$ S_{21(off)} _2$ (dB)	
Silicon RF switches

# BUILDING ON DECADES OF RF LEADERSHIP

Our application **experts** work with you to solve any design challenge to help you realize a clear competitive advantage.

# 4. Design support

This chapter guides you through the available tools, documents, materials, and links that ease the design-in of our products.

## 4.1 Explore NXP's RF portfolio

Beyond this RF Manual, you can learn about NXP's broad RF portfolio through the NXP Technical Academy, various webinars, and the NXP channel on YouTube.

On NXP's YouTube channel, [www.youtube.com/user/nxpsemiconductors](http://www.youtube.com/user/nxpsemiconductors), there are short videos that explain NXP's portfolio, application information, tips and tricks to optimize your system's performance, and more.

## 4.2 Product selection on NXP.com

Every RF product has its own webpage on the NXP website. Pages can be accessed in several ways: by product tree, by application area, or via cross-reference search. Or, simply type 'nxp <product>' in the Google search bar.

### Product tree and parametric search

Our online product tree ([www.nxp.com/products/rf](http://www.nxp.com/products/rf)) categorizes the product by function. The parametric search tool allows you to refine the selection based on performance requirements.

## 4.3 Product evaluation

NXP offers a broad range of support material for evaluating RF products and optimizing the performance of your application.

### Datasheets and application notes

The first chapter of this RF Manual includes application diagrams, recommended type numbers, and product highlights. More in-depth application information is available in the product datasheets or in the Application Notes.

### Simulation tools

To help you evaluate our products in your specific application, NXP offers various simulation tools, including small-signal touchstone S-parameters and parametric models that let you customize the biasing conditions. The parametric models are based on best-in-class Mextram models developed by Philips

Research, a recognized leader in physics-based models. The parametric models fully support AC, DC, S-parameter, harmonic balance, and time-domain simulations. These models allow designers to assess the performance of complex systems at an early stage of the development process.

The models are available for Advanced Design System (ADS), Microwave Office (MWO), Genesys, and Ansoft Designer. Spice versions of the parametric models, which can be used with almost any commercial design tool, are also available.

### Customer evaluation kits and samples

Several kits are available for product evaluation. Boards are provided with industry-standard RF connectors to facilitate measurements and design-in. The features and contents of each kit are described on the NXP website and are listed on the corresponding product page. On the Customer Evaluation Kits page you can also find support materials, such as the latest user manuals and software updates. You can order small quantities of all products to build and evaluate prototypes. To obtain a kit or order samples, please contact your local NXP representative or authorized distributor.

## 4.4 Additional design-in support

If you need additional design-in support, please contact your local NXP sales representative or authorized distributor. You can also submit a question using the web form on the NXP website.

## 4.5 Application notes

AN number	AN title	Application	product type name	new type name
-----------	----------	-------------	-------------------	---------------

### automotive

AN11024	SDARS active antenna 2nd stage LNA with BFU690, 2.33 GHz	automotive	BFU690	-
AN11066	SDARS active antenna 1st stage LNA with BFU730F, 2.33 GHz	automotive	BFU730F	-

### broadband communication

AN11209	Set-Top Box LNAs BGU703X and BGU704X	broadband communication	BGU703x, BGU704x	-
AN11220	BGA3012 - 1 GHz 12 dB gain wideband amplifier MMIC	broadband communication	BGA3012	-
AN11221	BGA3015 - 1 GHz 15 dB gain wideband amplifier MMIC	broadband communication	BGA3015	-
AN11222	BGA3018 - 1 GHz 18 dB gain wideband amplifier MMIC	broadband communication	BGA3018	-
AN11228	BGA301x Wideband Variable Gain Amplifier Application	broadband communication	BGA301x	-
AN11293	BGA3012 - 5 MHz to 300 MHz 12 dB reverse amplifier application	broadband communication	BGA3012	-
AN11294	BGA3015 - 5 MHz to 300 MHz 15 dB reverse amplifier application	broadband communication	BGA3015	-
AN11295	BGA3018 - 5 MHz to 300 MHz 18 dB reverse amplifier application	broadband communication	BGA3018	-
AN11296	BGA3018 - 40 MHz to 2600 MHz wideband amplifier application	broadband communication	BGA3018	-
AN11299	BGA301x - 40 MHz to 1006 MHz push-pull application	broadband communication	BGA301x	-
AN11541	Optical mini node.....	broadband communication		-
AN11545	BGA3023 - 1.2 GHz 20 dB gain CATV amplifier	broadband communication	BGA3023	-
AN11546	BGA3022 - 1.2 GHz 18 dB gain CATV amplifier	broadband communication	BGA3022	-
AN11547	BGA3021 - 1.2 GHz 16 dB gain CATV amplifier	broadband communication	BGA3021	-
AN11753	BGA3131 Thermal considerations	broadband communication	BGA3131	-
AN11817	BGA3131 DOCSIS 3.1 upstream amplifier	broadband communication	BGA3131	-

### general purpose

AN11152	Reducing the Spurs at RF_out caused by the biasing choke during fast switching on and off in TDD system	general purpose	-	-
UM10414	General Purpose Wideband Amp in SOT363 Demo Board	general purpose	-	-
UM10559	BFU6xx/BFU7xx Transistor Starter Kit Users Manual	general purpose	BFU6xx, BFU7xx	-
UM10772	User Manual BFU5xx series starter kits	general purpose	BFU5xx	-

## Application notes (continued)

AN number	AN title	Application	product type name	new type name
general purpose LNA				
AN11006	Single stage 2.3_2.7GHz LNA with BFU730F	general purpose LNA	BFU730F	-
AN11072	BGU7003 400 MHz and 900 MHz application	general purpose LNA	BGU7003	-
AN11103	Externally-matched 900 MHz LNA using BGU7005	general purpose LNA	BGU7005	GPS1101M
AN11118	BFU725F/N1 1.5 GHz LNA evaluation board	general purpose LNA	BFU725F/N1	-
AN11148	BGU7003 1900MHz to 2100MHz LNA Application	general purpose LNA	BGU7003	-
AN11339	Maximum RF Input Power BFU730LX	general purpose LNA	BFU730LX	-

## 6.2 Marking codes

In general, device marking includes the part number, some manufacturing information, and the NXP logo. If packages are too small for the full-length part number, a shorter, coded part number (called the "marking code") is used instead. To save space, the marking code uses a % symbol in place of the manufacturing-site code. The full-length part number is always printed on the packing label on the box or bulk-pack in which the devices are supplied.

t = made in Malaysia

W = made in China

Marking code	Type	Package	Marking code	Type	Package	Marking code	Type	Package
A1	BA591	SOD323	CE	BB173	SOD523	HW%	BFU550A	SOT23
