

High Reliability Reinforced Isolated Amplifier

Datasheet (EN) 1.4

Product Overview

NSi1300 is a high-performance isolated amplifier with output separated from input based on the NOVOSENSE capacitive isolation technology. The device has a linear differential input signal range of $\pm 50\text{mV}$ ($\pm 64\text{mV}$ full-scale) or $\pm 250\text{mV}$ ($\pm 320\text{mV}$ full-scale). The differential input is ideally suited to shunt resistor-based current sensing in high voltage applications where isolation is required.

The device has a fixed gain (8.2 or 41) and provides a differential analog output.

The low offset and gain drift ensure the accuracy over the entire temperature range. High common-mode transient immunity ensures that the device is able to provide accurate and reliable measurements even in the presence of high-power switching such as in motor control applications.

The fail-safe functions including input common-mode overvoltage detection and missing VDD1 detection simplify system-level design and diagnostics.

Key Features

- Up to $5000\text{V}_{\text{rms}}$ Insulation voltage
- $\pm 50\text{mV}$ or $\pm 250\text{mV}$ linear Input Voltage Range

- Fixed Gain: 8.2 or 41

- Low Offset Error and Drift:

NSI1300D25: $\pm 0.2\text{mV}$ (Max), $-2\sim 4\mu\text{V}/^{\circ}\text{C}$ (Max)

NSI1300D05: $\pm 0.1\text{mV}$ (Max), $-0.8\sim 1\mu\text{V}/^{\circ}\text{C}$ (Max)

- Low Gain Error and Drift:

$\pm 0.3\%$ (Max), $\pm 50\text{ppm}/^{\circ}\text{C}$ (Max)

- Low Nonlinearity and Drift:

$\pm 0.03\%$ (Max), $\pm 1\text{ppm}/^{\circ}\text{C}$ (Typ)

- SNR: 86dB (Typ, BW=10kHz), 72dB (Typ, BW=100kHz)

- Wide bandwidth: 310kHz (Typ)

- High CMTI: $150\text{kV}/\mu\text{s}$ (Typ)
- System-Level Diagnostic Features:
 - VDD1 monitoring
 - Input common-mode overvoltage detection
- Operation Temperature: $-40^{\circ}\text{C} \sim 125^{\circ}\text{C}$
- RoHS-Compliant Packages:
 - SOP8(300mil)

Safety Regulatory Approvals

- UL recognition: up to $5000\text{V}_{\text{rms}}$ for 1 minute per UL1577
- CQC certification per GB4943.1-2011
- CSA component notice 5A approval IEC60950-1 standard
- DIN VDE V 0884-11:2017-01

Applications

- Shunt current monitoring
- AC motor controls
- Uninterruptible Power Suppliers
- Automotive onboard chargers

Device Information

1. Pin Configuration and Functions

Figure 1.1 NSi1300 Package

Table 1.1 NSi1300 Pin Configuration and Description

NSi1300 PIN NO.	SYMBOL	FUNCTION
1	VDD1	Power supply for isolator side 1(3.0V to 5.5V)
2	INP	Positive analog input (±250mV recommended for NSI1300D25 and ±50mV recommended for NSI1300D05)
3	INN	Negative analog input
4	GND1	Ground 1, the ground reference for Isolator Side 1
5	GND2	Ground 2, the ground reference for Isolator Side 2
6	OUTN	Negative output
7	OUTP	Positive output
8	VDD2	Power supply for isolator side 2 (3.0V to 5.5V)

2. Absolute Maximum Ratings

Parameters	Symbol	Min	Typ	Max	Unit
Power Supply Voltage	VDD1, VDD2	-0.3		6.5	V
Input Voltage	INP, INN	GND1-6		VDD1+0.5	V
Output Voltage	OUTP, OUTN	GND2-0.5		VDD2+0.5	V
Output current per Output Pin	I _O	-10		10	mA
Operating Temperature	T _{OPR}	-40		125	°C
Junction Temperature	T _J	-40		150	°C
Storage Temperature	T _{STG}	-55		150	°C
Electrostatic discharge	HBM ⁽¹⁾	±2000			V
	CDM ⁽²⁾	±1000			V

(1) Human body model (HBM), per AEC-Q100-002-RevD

(2) Charged device model (CDM), per AEC-Q100-011-RevB

3. Recommended Operating Conditions

Parameters	Symbol	Min	Typ	Max	Unit
Side1 Power Supply	VDD1	3.0	5.0	5.5	V
Side2 Power Supply	VDD2	3.0	3.3	5.5	V
NSI1300D05	Differential input voltage before clipping output	V _{Clipping}	±64		mV
	Linear differential input full scale voltage	V _{FSR}	-50	50	mV
	Operating common-mode input voltage	V _{CM}	-0.032	0.8	V
NSI1300D25	Differential input voltage before clipping output	V _{Clipping}	±320		mV
	Linear differential input full scale voltage	V _{FSR}	-250	250	mV
	Operating common-mode input voltage	V _{CM}	-0.16	0.8	V
Operating Ambient Temperature	T _A	-40		125	°C

4. Thermal Information

Parameters	Symbol	SOP8(300mil)	Unit
Junction-to-ambient thermal resistance	R _{θJA}	86	°C/W
Junction-to-case (top) thermal resistance	R _{θJC(top)}	28	°C/W

Parameters	Symbol	SOP8(300mil)	Unit
Junction-to-board thermal resistance	$R_{\theta JB}$	42	°C/W
Junction-to-top characterization parameter	Ψ_{JT}	4	°C/W
Junction-to-board characterization parameter	Ψ_{JB}	42	°C/W

5. Specifications

5.1. Electrical Characteristics: NSI1300D05

(VDD1 = 3.0V ~ 5.5V, VDD2 = 3.0V ~ 5.5V, INP = -50mV to +50mV, and INN = GND1 = 0V, T_A = -40°C to 125°C. Unless otherwise noted, Typical values are at VDD1 = 5V, VDD2 = 3.3V, T_A = 25°C)

7. Function Description

7.1. Overview

The NSI1300 is a high performance isolated amplifier that accept fully-differential input. The fully-differential input is ideally suited to shunt current monitoring in high voltage applications where isolation is required. The analog input is continuously sampled by a second-order $\Sigma\Delta$ modulator in the device, which is driven by a pre-stage fully-differential amplifier in the device. With the internal voltage reference and clock generator, the modulator convert the analog input signal to a digital bitstream. The output of the modulator is transferred by the drivers (called TX in the Functional Block Diagram) across the isolation barrier that separates the isolated side1 and side2 voltage. The received bitstream and clock are synchronized and processed, as shown in the Functional Block Diagram, by a fourth-order analog filter on the side2 and has a differential output.

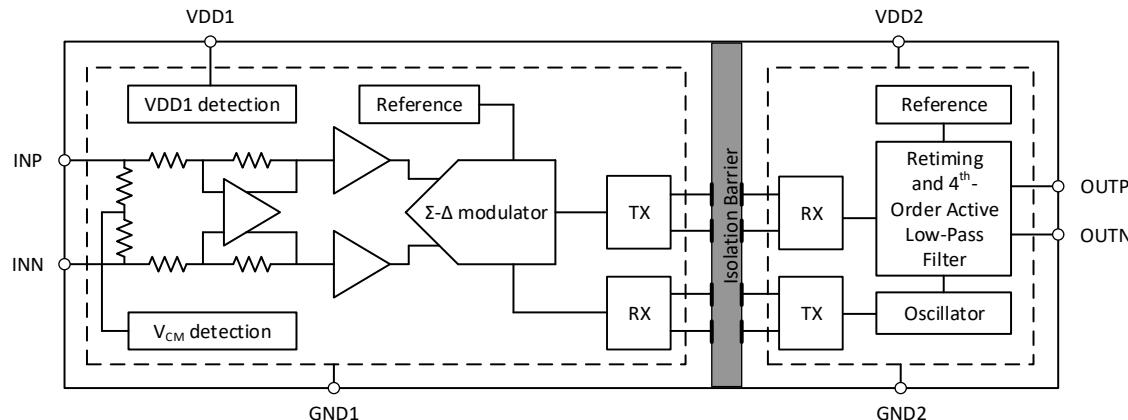

Figure 7.1 Function Block Diagram

7.2. Analog Input

There are two restrictions on the analog input signals (VINP and VINN).

- If the input voltage exceeds the range GND1 – 6 V to VDD1 + 0.5 V, the input current must be limited to 10 mA because the device input electrostatic discharge (ESD) diodes turn on.
- The linearity and noise performance of the device are ensured only when the analog input voltage remains within the specified linear full-scale range (FSR) and within the specified common-mode input voltage range.

7.3. Analog Output

For linear input range, the analog output of NSI1300 has a fixed gain (8.2 for NSI1300D25 and 41 for NSI1300D05). If a full-scale input signal is applied to the NSI1300 ($V_{IN} \geq V_{Clipping}$), the analog output will be clipped (typically, 2.45V for positive clipping and -2.45V for negative clipping).

In addition, NSI1300 integrates some diagnostic measures and offers a fail-safe output to simplify system-level design. The fail-safe output is a negative differential output voltage that does not occur under normal device operation, and it will only be activated in following conditions:

- When the undervoltage of VDD1 is detected ($VDD1 < VDD1_{UV}$).
- When the overvoltage of common-mode input voltage is detected ($V_{CM} > V_{CMov}$).

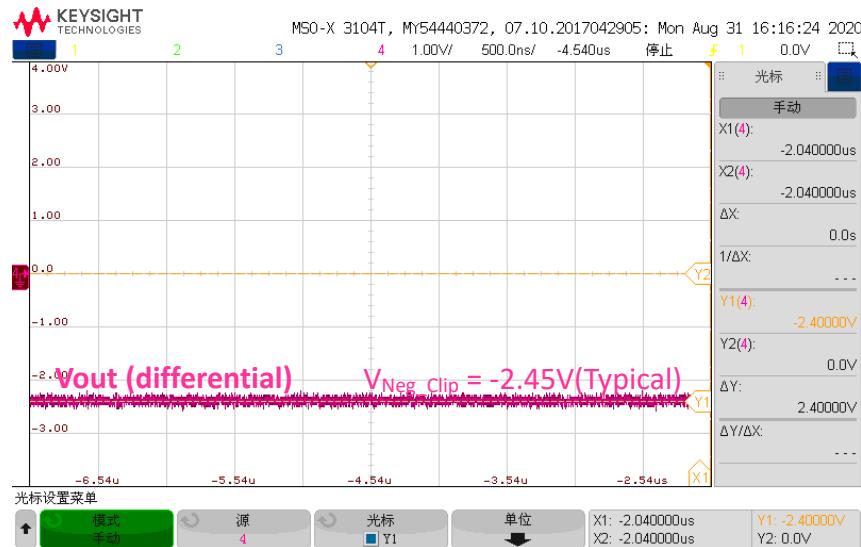

Figure 7.2 Typical negative clipping output

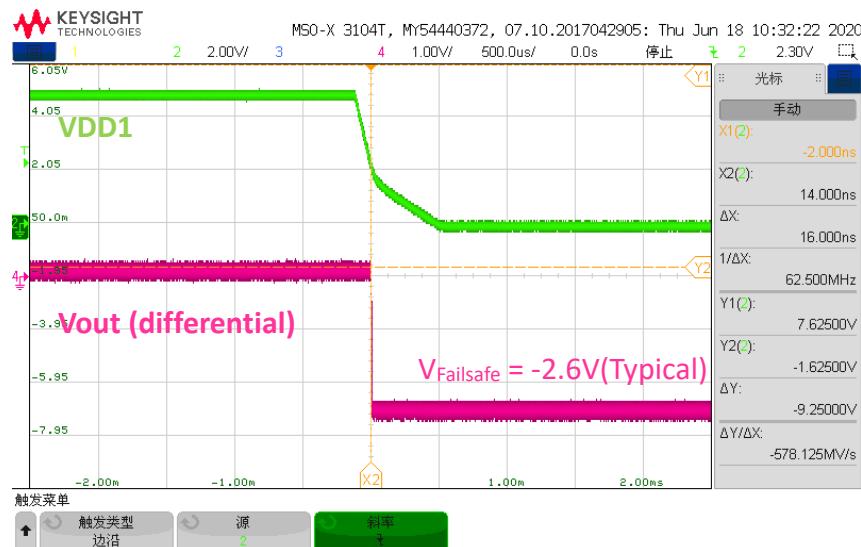

Figure 7.3 Typical Failsafe output when VDD1 undervoltage

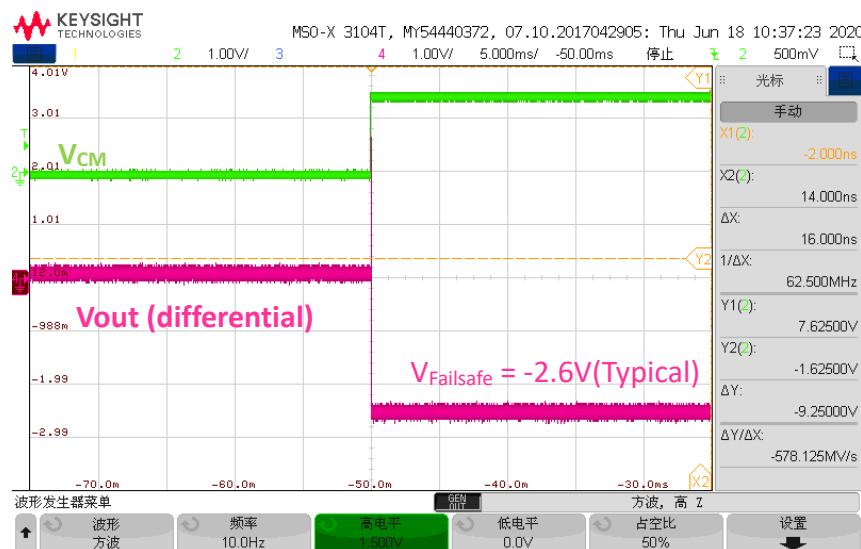

Figure 7.4 Typical Failsafe output when input common mode signal overvoltage

8. Application Note

8.1. Typical Application Circuit

NSI1300 is ideally suited to shunt resistor-based current sensing in high voltage applications such as frequency inverters. The typical application circuit is shown in Figure 8.1.

The voltage across the shunt resistor R_{sense} is applied to the differential input of NSI1300 through a RC filter. The differential output of the isolated amplifier is converted to a single-ended analog output with an operational-amplifier-based circuit. Suggest to add $>1\text{k}\Omega$ resistor on the OUTP and OUTN pin to prevent output over-current. An analog-to-digital converter usually receives the analog output and converts to digital signal for controller processing.

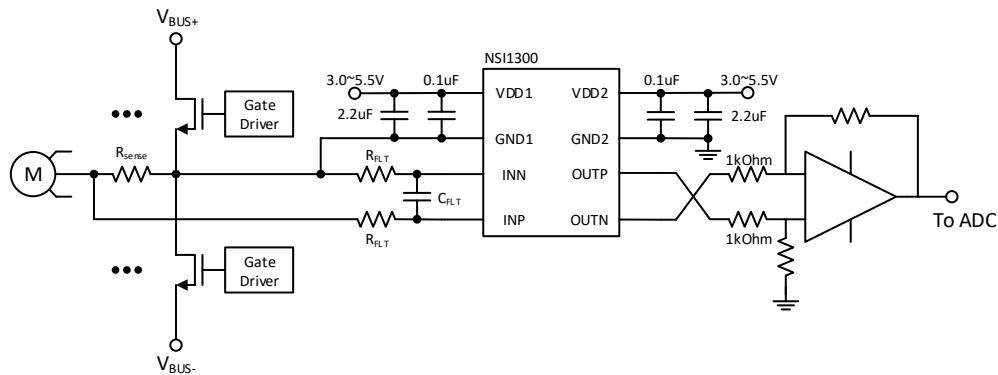

Figure 8.1 Typical application circuit in phase current sensing

8.2. Shunt Resistor Selection

Choosing a particular shunt resistor is usually a compromise between minimizing power dissipation and maximizing accuracy. Smaller sense resistor decreases power dissipation, while larger sense resistor can improve measure accuracy by utilizing the full input range of isolated amplifier.

There are two other factors should be considered when selecting the shunt resistor:

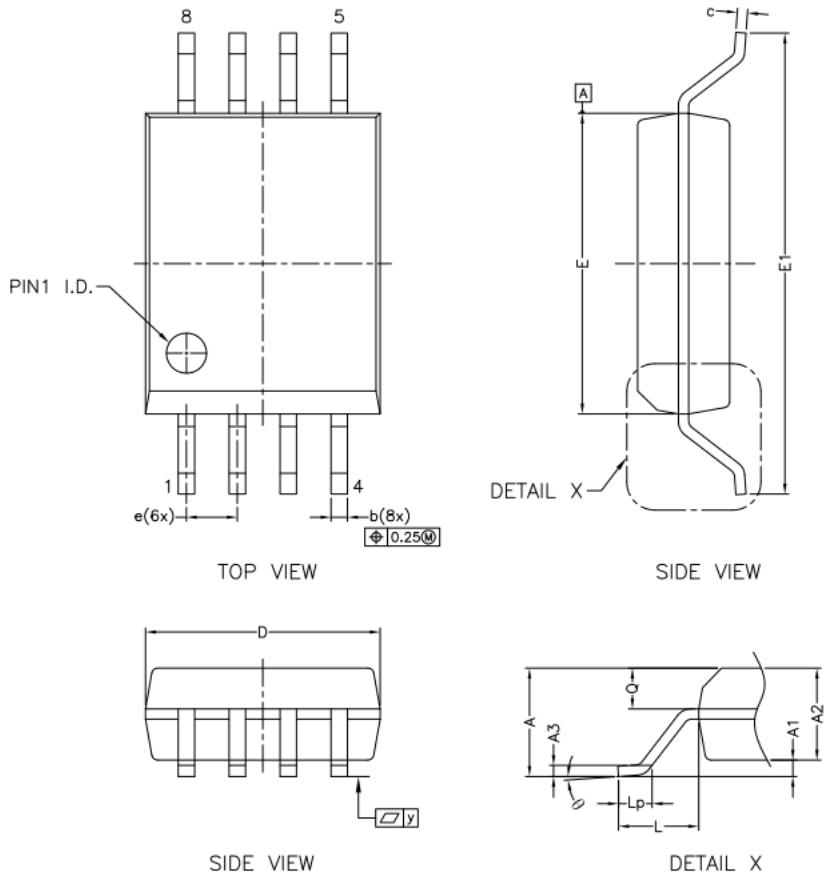

- The voltage-drop caused by the rated current range must not exceed the recommended linear input voltage range: $V_{SHUNT} \leq FSR$.
- The voltage-drop caused by the maximum allowed overcurrent must not exceed the input voltage that causes a clipping output: $V_{SHUNT} \leq V_{Clipping}$.

8.3. PCB Layout

There are some key guidelines or considerations for optimizing performance in PCB layout:

- NSI1300 requires a $0.1\mu\text{F}$ bypass capacitor between VDD1 and GND1, VDD2 and GND2. The capacitor should be placed as close as possible to the VDD pin. If better filtering is required, an additional $1\sim10\mu\text{F}$ capacitor may be used.
- Kelvin rules is recommended for the connection between shunt resistor to NSI1300. Because of the Kelvin connection, any voltage drops across the trace and leads should have no impact on the measured voltage.
- Place the shunt resistor close to the INP and INN inputs and keep the layout of both connections symmetrical and run very close to each other to the input of the NSI1300. This minimizes the loop area of the connection and reduces the possibility of stray magnetic fields from interfering with the measured signal.

10. Ordering Information

Part No.	Isolation Rating(kV)	Linear Input Range(mV)	Moisture Sensitivity Level	Temperature	Automotive	Package Type	Package Drawing	SPQ
NSI1300D05 - DSWVR	5	-50 ~ 50	Level-3	-40 to 125°C	NO	SOP8 (300mil)	SOW8	1000
NSI1300D25 - DSWVR	5	-250 ~ 250	Level-3	-40 to 125°C	NO	SOP8 (300mil)	SOW8	1000

13. Revision History

Revision	Description	Date
1.0	Initial Release	2020/8/29
1.1	<ul style="list-style-type: none">● Add Nonlinearity vs Input Voltage, Power-Supply Rejection Ratio vs Ripple Frequency and Output Voltage vs Input Voltage Performance Characteristics in 5.3● Update Certificate number of Regulatory Information in 6.3	2021/1/16
1.2	Add V _{iso} specification in 6.2 Insulation Characteristics and AEC-Q100 qualification	2021/4/12
1.3	<ul style="list-style-type: none">● Remove NSI1300x-Q1 order information and add in NSI1300x-Q1 datasheet● Add SOW8 package layout example	2021/7/12
1.4	Update insulation characteristics	2021/7/17
