SN74ALS29841, SN74ALS29842
10-BIT BUS INTERFACE D-TYPE LATCHES WITH 3-STATE OUTPUTS

D3078, JUNE 1988

- **3-State Buffer-Type Outputs Drive Bus-Lines Directly**
- **Bus-Structured Pinout**
- **Provide Extra Bus Driving Latches Necessary for Wider Address/Data Paths or Buses with Parity**
- **Buffered Control Inputs to Reduce DC Loading**
- **Power-Up High-Impedance State**
- **Package Options Include Plastic "Small Outline" Packages, Plastic Chip Carriers, and Standard Plastic 300-mil DIPs**
- **Dependable Texas Instruments Quality and Reliability**

description

These 10-bit latches feature three-state outputs designed specifically for driving highly capacitive or relatively low-impedance loads. They are particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The ten latches are transparent D-type. The 'ALS29841 has noninverting data (D) inputs. The 'ALS29842 has inverting $\overline{D}$ inputs.

A buffered output control ($\overline{OC}$) input can be used to place the ten outputs in either a normal logic state (high or low levels) or a high-impedance state. The outputs are also in the high-impedance state during power-up and power-down conditions. The outputs remain in the high-impedance state while the device is powered-down. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive the bus lines in a bus-organized system without need for interface or pull-up components.

The output control does not affect the internal operation of the latches. Old data can be retained or new data can be entered while the outputs are off.

The SN74ALS29841 and SN74ALS29842 are characterized for operation from 0°C to 70°C.

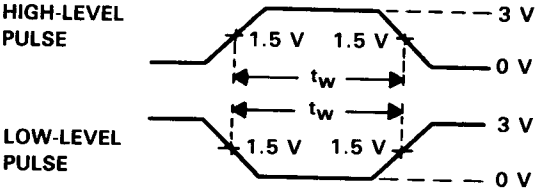
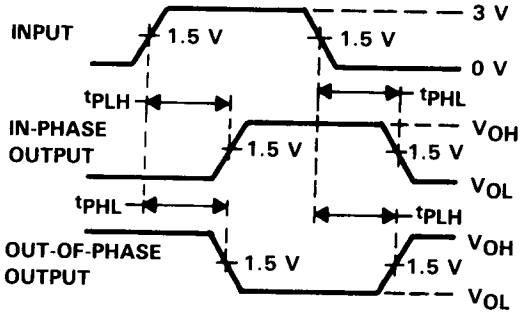
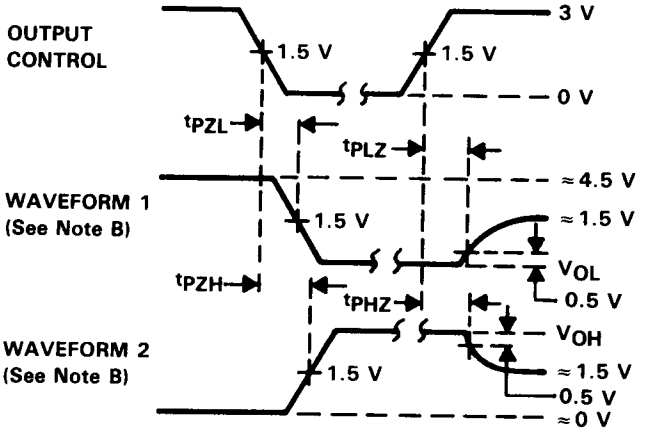
VOLTAGE WAVEFORMS
SETUP AND HOLD TIMES



VOLTAGE WAVEFORMS
PULSE DURATIONS



VOLTAGE WAVEFORMS
PROPAGATION DELAY TIMES



VOLTAGE WAVEFORMS
ENABLE AND DISABLE TIMES, THREE-STATE OUTPUTS

NOTES: A. C_L includes probe and jig capacitance.
B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
C. All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω, t_r ≤ 2.5 ns, t_f ≤ 2.5 ns.
