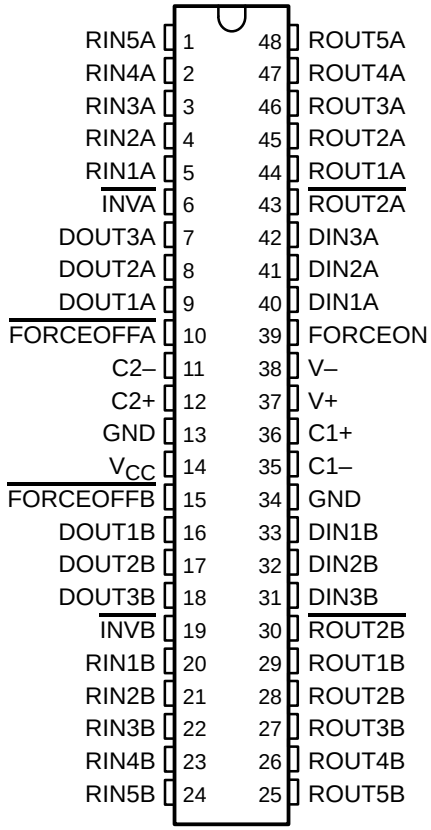
DGG OR DL PACKAGE
(TOP VIEW)



description

The SN65C23243 and SN75C23243 consist of two ports, each containing three line drivers and five line receivers, and a dual charge-pump circuit with ±15-kV ESD protection pin to pin (serial-port connection pins, including GND). These devices meet the requirements of TIA/EIA-232-F and provide the electrical interface between an asynchronous communication controller and the serial-port connector. This combination of drivers and receivers matches that needed for two typical serial ports used in an IBM PC/AT, or compatible. The charge pump and four small external capacitors allow operation from a single 3-V to 5.5-V supply. In addition, these devices include an always-active noninverting output ($\overline{ROUT2}$) per port, which allows applications using the ring indicator to transmit data while the devices are powered down. The devices operate at data signaling rates up to 250 kbit/s, and a maximum of 30-V/μs driver output slew-rate.

Flexible control options for power management are available when either or both serial ports are inactive. The auto-powerdown feature functions when FORCEON is low and $\overline{FORCEOFF}$ is high. During this mode of operation, if the device does not sense a valid RS-232 signal, the driver outputs of its respective port are disabled. If $\overline{FORCEOFF}$ is set low, both drivers and receivers (except $\overline{ROUT2}$) are shut off, and the supply current is reduced to 1 μA. Disconnecting the serial port or turning off the peripheral drivers causes the auto-powerdown condition to occur.

description (continued)

Auto-powerdown can be disabled when FORCEON and $\overline{\text{FORCEOFF}}$ are high, and should be done when driving a serial mouse. With auto-powerdown enabled, the RS-232 port is activated automatically when a valid signal is applied to any respective receiver input. The $\overline{\text{INV}}$ output is used to notify the user if an RS-232 signal is present at any receiver input. $\overline{\text{INV}}$ is high (valid data) if any receiver input voltage is greater than 2.7 V or less than –2.7 V or has been between –0.3 V and 0.3 V for less than 30 μs. $\overline{\text{INV}}$ is low (invalid data) if all receiver input voltages are between –0.3 V and 0.3 V for more than 30 μs. Refer to Figure 5 for receiver input levels.

The SN75C23243 is characterized for operation from 0°C to 70°C. The SN65C23243 is characterized for operation from –40°C to 85°C.

AVAILABLE OPTIONS

T_A	PACKAGED DEVICES	
	SHRINK SMALL OUTLINE (DL)	THIN SHRINK SMALL OUTLINE (DGG)
0°C to 70°C	SN75C23243DL	SN75C23243DGG
–40°C to 85°C	SN65C23243DL	SN65C23243DGG

The DL and DGG packages are available taped and reeled. Add the suffix R to device type (e.g., SN75C23243DLR).

Function Tables

EACH DRIVER
(each port)

INPUTS				OUTPUT	DRIVER STATUS
DIN	FORCEON	$\overline{\text{FORCEOFF}}$	VALID RIN RS-232 LEVEL	DOUT	
X	X	L	X	Z	Powered off
L	H	H	X	H	Normal operation with auto-powerdown disabled
H	H	H	X	L	
L	L	H	Yes	H	Normal operation with auto-powerdown enabled
H	L	H	Yes	L	
L	L	H	No	Z	Powered off by auto-powerdown feature
H	L	H	No	Z	

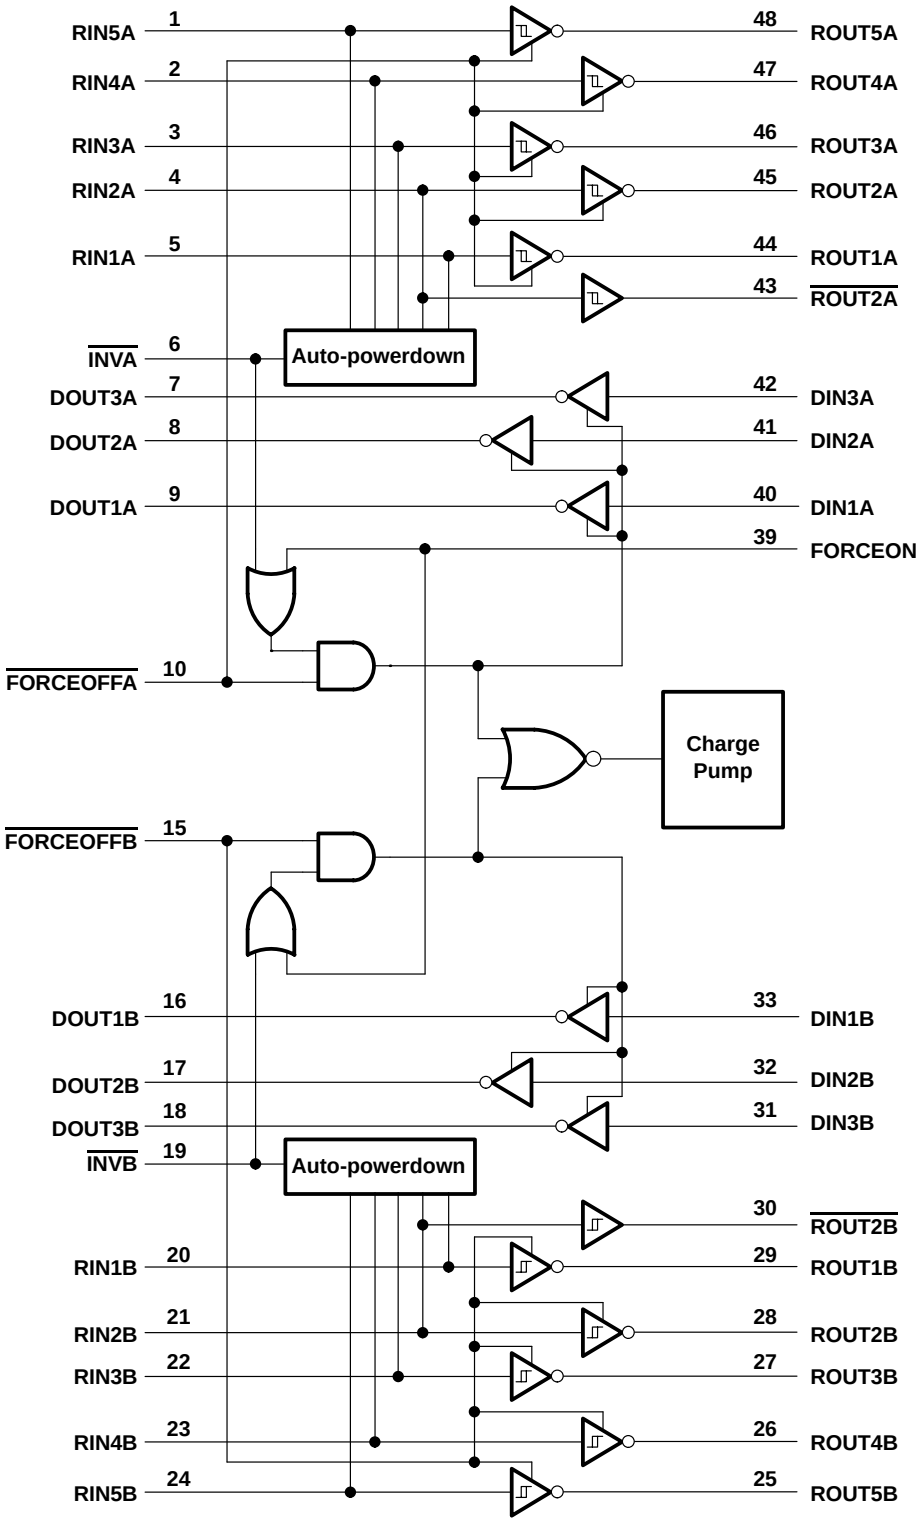
H = high level, L = low level, X = irrelevant, Z = high impedance

EACH RECEIVER
(each port)

INPUTS				OUTPUTS		RECEIVER STATUS
RIN2	RIN1, RIN3–RIN5	$\overline{\text{FORCEOFF}}$	VALID RIN RS-232 LEVEL	$\overline{\text{ROUT2}}$	ROUT	
L	X	L	X	L	Z	Powered off while $\overline{\text{ROUT2}}$ is active
H	X	L	X	H	Z	
L	L	H	Yes	L	H	Normal operation with auto-powerdown disabled/enabled
L	H	H	Yes	L	L	
H	L	H	Yes	H	H	
H	H	H	Yes	H	L	
Open	Open	H	No	L	H	

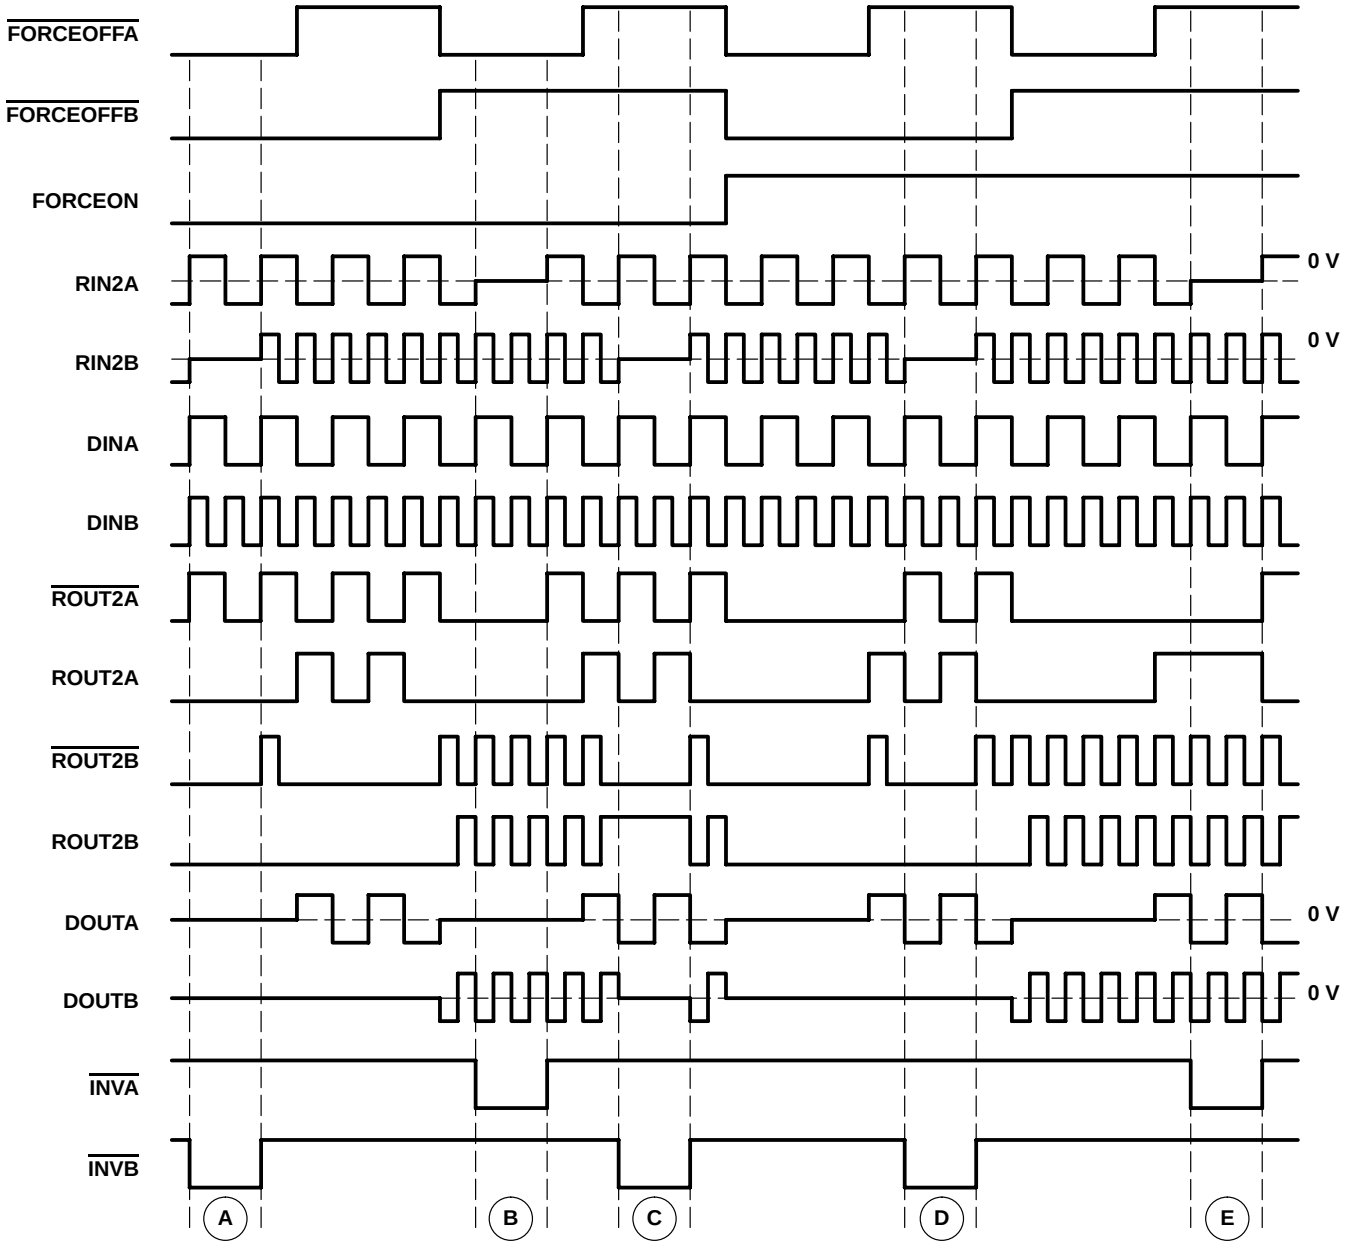
H = high level, L = low level, X = irrelevant, Z = high impedance (off), Open = input disconnected or connected driver off

logic diagram (positive logic)



timing

Figure 1 shows how the two independent serial ports can be enabled or disabled. As shown by the logic states, depending on the $\overline{\text{FORCEOFF}}$, FORCEON, and receiver input levels, either port can be powered down. Intermediate receiver input levels indicate a 0-V input. Also, it is assumed a pulldown resistor to ground is used for the receiver outputs. The $\overline{\text{INV}}$ pin goes low when its respective receiver input does not supply a valid RS-232 level. For simplicity, voltage levels, timing differences, and input/output edge rates are not shown.



NOTES: A. Ports A and B manually powered off
B. Port A manually powered off, port B in normal operation with auto-powerdown enabled
C. Port B powered off by auto-powerdown, port A in normal operation with auto-powerdown enabled
D. Port A in normal operation with auto-powerdown disabled, port B manually powered off
E. Ports A and B in normal operation with auto-powerdown disabled

Figure 1. Timing Diagram

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V_{CC} (see Note 1) . . . . . –0.3 V to 6 V
Positive output supply voltage range, V+ (see Note 1) . . . . . –0.3 V to 7 V
Negative output supply voltage, V– (see Note 1) . . . . . 0.3 V to –7 V
Supply voltage difference, V+ – V– (see Note 1) . . . . . 13 V
Input voltage range, V_I: Driver ($\overline{\text{FORCEOFF}}$, FORCEON) . . . . . –0.3 V to 6 V
Receiver . . . . . –25 V to 25 V
Output voltage range, V_O: Driver . . . . . –13.2 V to 13.2 V
Receiver ($\overline{\text{INV}}$) . . . . . –0.3 V to V_{CC} + 0.3 V
Package thermal impedance, θ_{JA} (see Note 2): DGG package . . . . . 70°C/W
DL package . . . . . 63°C/W
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds . . . . . 260°C
Storage temperature range, T_{stg} . . . . . –65°C to 150°C

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltages are with respect to network GND.
2. The package thermal impedance is calculated in accordance with JESD 51-7.

recommended operating conditions (see Note 3 and Figure 7)

- Single-Chip and Single-Supply Interface for Two IBM™ PC/AT Serial Port
- Meet or Exceed the Requirements of TIA/EIA-232-F and ITU v.28 Standards
- Operate With 3-V to 5.5-V V_{CC} Supply
- Always-Active Noninverting Receiver Output (ROUT2\) Per Port
- Operate up to 250 kbit/s
- Low Standby Current ...1 uA Typical
- External Capacitors ...4 × 0.22 uF
- Accept 5-V Logic Input With 3.3-V Supply
- Allow for Flexible Power Down of Either Serial Port
- Serial-Mouse Driveability
- RS-232 Bus-Pin ESD Protection Exceeds ±15 kV Using Human-Body Model (HBM)
- Applications
  - Battery-Powered Systems, Notebooks, Laptops, Palmtop PCs, and Hand-Held Equipment
- Package Options Include Plastic Shrink Small-Outline (DL) and Thin Shrink Small-Outline (DGG) Packages

DESCRIPTION

Back to Top

The SN65C23243 and SN75C23243 consist of two ports, each containing three line drivers and five line receivers, and a dual charge-pump circuit with ±15-kV ESD protection pin to pin (serial-port connection pins, including GND). These devices meet the requirements of TIA/EIA-232-F and provide the electrical interface between an asynchronous communication controller and the serial-port connector. This combination of drivers and receivers matches that needed for two typical serial ports used in an IBM PC/AT, or compatible. The charge pump and four small external capacitors allow operation from a single 3-V to 5.5-V supply. In addition, these devices include an always-active noninverting output (ROUT2\) per port, which allows applications using the ring indicator to transmit data while the devices are powered down. The devices operate at data signaling rates up to 250 kbit/s, and a maximum of 30-V/us driver output slew-rate.

Flexible control options for power management are available when either or both serial ports are inactive. The auto-powerdown feature functions when FORCEON is low and FORCEOFF\ is high. During this mode of operation, if the device does not sense a valid RS-232 signal, the driver outputs of its respective port are disabled. If FORCEOFF\ is set low, both drivers and receivers (except ROUT2\) are shut off, and the supply current is reduced to 1 uA. Disconnecting the serial port or turning off the peripheral drivers causes the auto-powerdown condition to occur.

Auto-powerdown can be disabled when FORCEON and FORCEOFF\ are high, and should be done when driving a serial mouse. With auto-powerdown enabled, the RS-232 port is activated automatically when a valid signal is applied to any respective receiver input. The INV\output is used to notify the user if an RS-232 signal is present at any receiver input. INV\ is high (valid data) if any receiver input voltage is greater than 2.7 V or less than –2.7 V or has been between –0.3 V and 0.3 V for less than 30 us. INV\ is low (invalid data) if all receiver input voltages are between –0.3 V and 0.3 V for more than 30 us. Refer to Figure 5 for receiver input levels.

The SN75C23243 is characterized for operation from 0°C to 70°C. The SN65C23243 is characterized for operation from –40°C to 85°C.
