

# SN54FB2041, SN74FB2041 7-BIT TTL/BTL TRANSCEIVERS

SCBS172B – NOVEMBER 1991 – REVISED SEPTEMBER 1994

---

## description (continued)

The A port operates at TTL-signal levels and has split input and output pins. The A outputs reflect the inverse of the data at the  $\bar{B}$  port when the A-port output enable, OEA, is high. When OEA is low or when  $V_{CC}$  is typically less than 2.5 V, the A outputs are in the high-impedance state.

Pins are allocated for the four-wire IEEE 1149.1 (JTAG) test bus. Currently, TMS and TCK are not connected and TDI is shorted to TDO.

BIAS  $V_{CC}$  establishes a voltage between 1.62 V and 2.1 V on the BTL outputs when  $V_{CC}$  is not connected.

The SN54FB2041 is characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN74FB2041 is characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .

FUNCTION TABLE

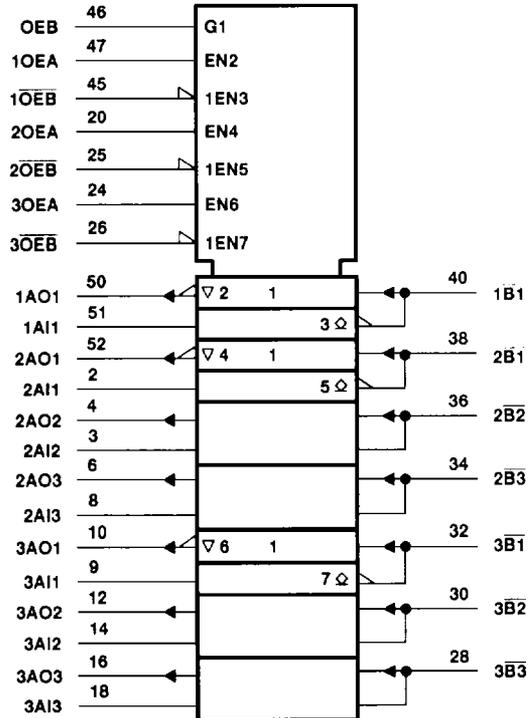

| INPUTS |                    |     | FUNCTION  |
|--------|--------------------|-----|---|
| OEB    | $\bar{\text{OEB}}$ | OEA |   |
| L      | X                  | L   | Isolation   |
| X      | H                  | L   |   |
| L      | X                  | H   | $\bar{B}$ data to AO bus                            |
| X      | H                  | H   |   |
| H      | L                  | L   | $\bar{A}$ I data to B bus                           |
| H      | L                  | H   | $\bar{A}$ I data to B bus, $\bar{B}$ data to AO bus |

## absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

|   |                    |
|---|--------------------|
| Supply voltage range, $V_{CC}$ .....  | –0.5 V to 7 V      |
| Input voltage range, $V_I$ : except $\bar{B}$ port .....  | –1.2 V to 7 V      |
| $\bar{B}$ port .....  | –1.2 V to 3.5 V    |
| Input current range (except $\bar{B}$ port) .....   | –40 mA to 5 mA     |
| Voltage range applied to any $\bar{B}$ output in the disabled or power-off state .....              | –0.5 V to 5.5 V    |
| Voltage range applied to any output in the high state .....   | –0.5 V to $V_{CC}$ |
| Current applied to any single output in the low state: A port .....                                 | 48 mA              |
| $\bar{B}$ port .....  | 200 mA             |
| Operating free-air temperature range, $T_A$ : SN54FB2041 .....                                      | –55°C to 125°C     |
| SN74FB2041 .....  | 0°C to 70°C        |
| Maximum power dissipation at $T_A = 55^\circ\text{C}$ (in still air) (see Note 1): RC package ..... | 1.4 W              |
| Storage temperature range .....   | –65°C to 150°C     |

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: The maximum package power dissipation is calculated using a junction temperature of 150°C and a board trace length of 75 mils. For more information, refer to the *Package Thermal Considerations* application note in the 1994 *ABT Advanced BiCMOS Technology Data Book*, literature number SCBD002B.

## recommended operating conditions (see Note 2)

PRODUCT PREVIEW information concerns products in the formative or design phase of development. Characteristic data and other specifications are design goals. Texas Instruments reserves the right to change or discontinue these products without notice.

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

# SN54FB2041, SN74FB2041 7-BIT TTL/BTL TRANSCEIVERS

SCBS172B – NOVEMBER 1991 – REVISED SEPTEMBER 1994

## PARAMETER MEASUREMENT INFORMATION

- NOTES: A.  $C_L$  includes probe and jig capacitance.  
 B. All input pulses are supplied by generators having the following characteristics: TTL inputs – PRR  $\leq$  10 MHz,  $Z_O = 50 \Omega$ ,  $t_r \leq 2.5$  ns,  $t_f \leq 2.5$  ns. BTL inputs – PRR  $\leq$  10 MHz,  $Z_O = 50 \Omega$ ,  $t_r \leq 2.5$  ns,  $t_f \leq 2.5$  ns.  
 C. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.  
 D. The outputs are measured one at a time with one transition per measurement.
