Quiet Series Octal D Flip-Flop with TRI-STATE® Outputs

General Description

The 'ACQ/'ACTQ534 is a high-speed, low-power octal D-type flip-flop featuring separate D-type inputs for each flip-flop and TRI-STATE outputs for bus-oriented applications. A buffered Clock (CP) and Output Enable (\overline{OE}) are common to all flip-flops. The 'ACQ/'ACTQ534 is the same as the 'ACQ/'ACTQ374 except that the outputs are inverted.

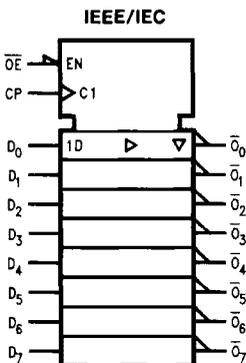

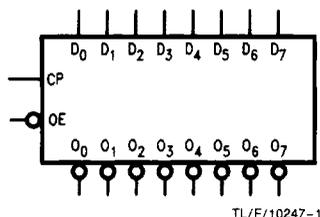

The 'ACQ/'ACTQ534 utilizes Quiet Series technology to guarantee quiet output switching and improve dynamic threshold performance. FACT Quiet Series™ features GTO™ output control and undershoot corrector in addition to a split ground bus for superior performance.

Features

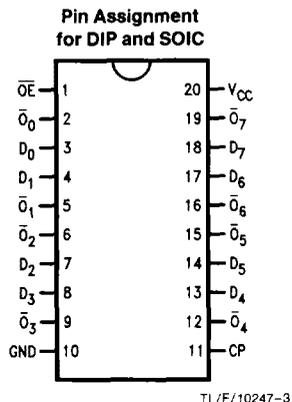

- I_{CC} and I_{OZ} reduced by 50%
- Guaranteed simultaneous switching noise level and dynamic threshold performance
- Guaranteed pin-to-pin skew AC performance
- Improved latch-up immunity
- Buffered positive edge-triggered clock
- TRI-STATE outputs for bus-oriented applications
- Inverted output version of the 'ACQ/'ACTQ374
- Faster prop delays than the standard 'ACT534
- 4 kV minimum ESD immunity

Ordering Code: See Section 8

Functional Description

The 'ACQ/'ACTQ534 consists of eight D-type flip-flops with individual inputs and TRI-STATE complementary outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold times

requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable (\overline{OE}) LOW, the contents of the eight flip-flops are available at the outputs. When the \overline{OE} is HIGH, the outputs go to the high impedance state. Operation of the \overline{OE} input does not affect the state of the flip-flops.
