100351
Low Power Hex D Flip-Flop

General Description

The 100351 contains six D-type edge-triggered, master/slave flip-flops with true and complement outputs, a pair of common Clock inputs (CP_a and CP_b) and common Master Reset (MR) input. Data enters a master when both CP_a and CP_b are LOW and transfers to the slave when CP_a and CP_b (or both) go HIGH. The MR input overrides all other inputs and makes the Q outputs LOW. All inputs have 50 kΩ pull-down resistors.

Features

- Pin/function compatible with 100151
- Voltage compensated operating range: −4.2V to −5.7V
- Standard Microcircuit Drawing (SMD) 5962-9457901

Note 3: F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals −55˚C), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.

Note 4: Screen tested 100% on each device at −55˚C, +25˚C, and +125˚C, Subgroups 1, 2, 3, 7, and 8.

Note 5: Sample tested (Method 5005, Table I) on each manufactured lot at −55˚C, +25˚C, and +125˚C, Subgroups A1, 2, 3, 7, and 8.

Note 6: Guaranteed by applying specified input condition and testing V_{OH}/V_{OL}.
