

CD4518BM/CD4518BC, CD4520BM/CD4520BC Dual Synchronous Up Counters

General Description

The CD4518BM/CD4518BC dual BCD counter and the CD4520BM/CD4520BC dual binary counter are implemented with complementary MOS (CMOS) circuits constructed with N- and P-channel enhancement mode transistors.

Each counter consists of two identical, independent, synchronous, 4-stage counters. The counter stages are toggle flip-flops which increment on either the positive-edge of CLOCK or negative-edge of ENABLE, simplifying cascading of multiple stages. Each counter can be asynchronously

cleared by a high level on the RESET line. All inputs are protected against static discharge by diode clamps to both V_{DD} and V_{SS}.

Features

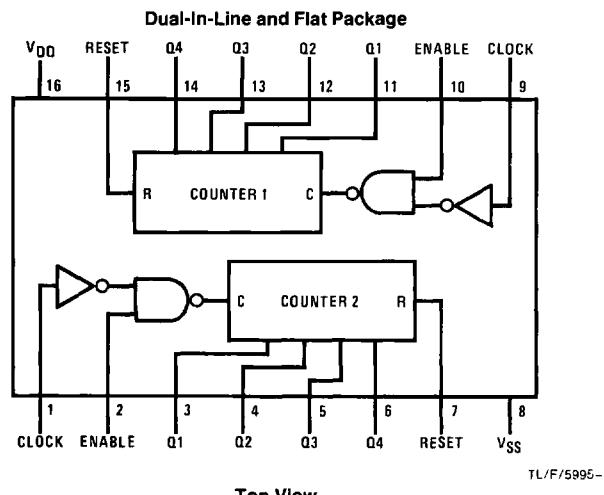

- Wide supply voltage range 3.0V to 15V
- High noise immunity 0.45 V_{DD} (typ.)
- Low power TTL fan out of 2 driving 74L
- compatibility or 1 driving 74LS
- 6 MHz counting rate (typ.) at V_{DD} = 10V

*AC Parameters are guaranteed by DC correlated testing.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The tables of "Recommended Operating Conditions" and "Electrical Characteristics" provide conditions for actual device operation.

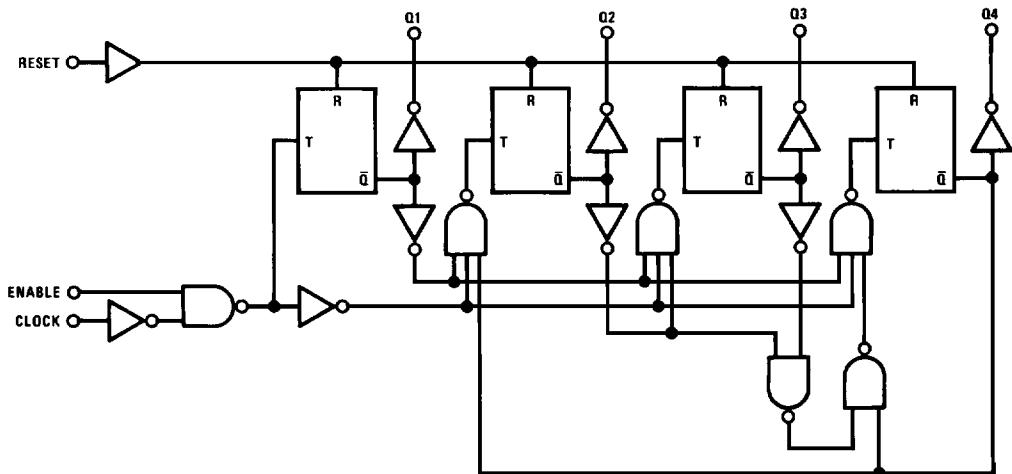

Note 2: V_{SS} = 0V unless otherwise specified.

Note 3: I_{OH} and I_{OL} are tested one output at a time.

Note 4: C_{PD} determines the no load AC power consumption of a CMOS device. For a complete explanation, see "54C/74C Family Characteristics", application note AN-90.
