

TRF1208 10-MHz to 11-GHz, 3-dB-BW ADC Driver Amplifier

1 Features

- Excellent performance driving RF ADCs
 - Single-ended to differential
 - Differential to differential
- Two fixed-gain variants:
 - 16 dB (TRF1208)
 - 10 dB (TRF1208B)
- Bandwidth:
 - TRF1208: 8 GHz (1-dB), 11 GHz (3-dB)
 - TRF1208B: 8.8 GHz (1-dB), 10.5 GHz (3-dB)
- OIP3:
 - TRF1208: 37 dBm (2 GHz), 32 dBm (6 GHz)
 - TRF1208B: 36 dBm (2 GHz), 28 dBm (6 GHz)
- P1dB:
 - TRF1208: 15 dBm (2 GHz), 12.5 dBm (6 GHz)
 - TRF1208B: 14 dBm (2 GHz), 11 dBm (6 GHz)
- Noise figure:
 - TRF1208: 7 dB (2 GHz), 7 dB (8 GHz)
 - TRF1208B: 9.4 dB (2 GHz), 10.2 dB (8 GHz)
- Output noise spectral density (NSD), dBm/Hz:
 - TRF1208: –151 (2 GHz), –151 (8 GHz)
 - TRF1208B: –154.6 (2 GHz), –153.8 (8 GHz)
- Gain and phase imbalance: ± 0.3 dB and $\pm 3^\circ$
- Power-down feature
- 3.3-V single-supply operation
- Active current: 138 mA

2 Applications

- RF sampling or GSPS ADC driver
- [Aerospace and defense](#)
- [Radar seeker front end](#)
- [Phased array radar](#)
- [Military radios](#)

- [Test and measurement](#)
- [High-speed digitizers](#)
- [Vector signal transceiver \(VST\)](#)
- [4G/5G wireless BTS](#)
- RF active balun

3 Description

The TRF1208 is a very high performance, RF amplifier optimized for radio frequency (RF) applications. This device is excellent for ac-coupled applications that require a single-ended to differential conversion when driving an analog-to-digital converter (ADC) such as the high performance [ADC12DJ5200RF](#). The on-chip matching components simplify printed circuit board (PCB) implementation and provide the highest performance over the usable bandwidth. The device is fabricated in Texas Instruments' advanced complementary BiCMOS process and is available in a space-saving, WQFN-FCRLF package.

The TRF1208 operates on a single-rail supply and consumes about 138 mA of active current. A power-down feature is also available for power savings.

Device Information⁽¹⁾

| PART NUMBER | GAIN | PACKAGE | PACKAGE SIZE ⁽²⁾ |
|-------------|-------|------------------|-----------------------------|
| TRF1208 | 16 dB | RPV | 2 mm × 2 mm |
| TRF1208B | 10 dB | (WQFN-FCRLF, 12) | |

- (1) For all available packages, see the orderable addendum at the end of the data sheet.
- (2) The package size (length × width) is a nominal value and includes pins, where applicable.

5 Pin Configuration and Functions

**Figure 5-1. RPV Package,
12-Pin WQFN-FCRLF
(Top View)**

Table 5-1. Pin Functions

| PIN | | TYPE ⁽¹⁾ | DESCRIPTION |
|-------------|-------------|---------------------|--|
| NAME | NO. | | |
| GND | 1, 4, 7, 10 | GND | Ground |
| INM | 5 | I | Differential signal input, negative |
| INP | 6 | I | Differential signal input, positive |
| OUTM | 12 | O | Differential signal output, negative |
| OUTP | 11 | O | Differential signal output, positive |
| PD | 2 | I | Power-down signal. Supports 1.8-V and 3.3-V Logic. 0 = Chip enabled 1 = Power down |
| TP1 | 8 | — | Test pin. Short to ground. |
| TP2 | 3 | — | Test pin. Short to ground. |
| VDD | 9 | P | 3.3-V supply |
| Thermal pad | Pad | — | Thermal pad. Connect to ground on board. |

(1) I = input, O = output, P = power, GND = ground

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | | MIN | MAX | UNIT |
|------------------------------|------------------------|-------------------------|-----|------|
| V _{DD} | Supply voltage | -0.3 | 3.7 | V |
| INP, INM | Input pin power | | 20 | dBm |
| V _{PD} | Power-down pin voltage | -0.3 | 3.7 | V |
| T _J | Junction temperature | -40 | 150 | °C |
| T _{stg} | Storage temperature | -40 | 150 | °C |
| Continuous power dissipation | | See thermal information | | |

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

6.2 ESD Ratings

| | | | VALUE | UNIT |
|--------------------|-------------------------|--|-------|------|
| V _(ESD) | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/ JEDEC JS-001, all pins ⁽¹⁾ | ±1000 | V |
| | | Charged device model (CDM), per ANSI/ESDA/ JEDEC JS-002, all pins ⁽²⁾ | ±250 | |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

| | | MIN | NOM | MAX | UNIT |
|-----------------|-------------------------|-----|-----|------|------|
| V _{DD} | Supply voltage | 3.2 | 3.3 | 3.45 | V |
| T _A | Ambient air temperature | -40 | 25 | 105 | °C |
| T _J | Junction temperature | -40 | | 125 | °C |

6.4 Thermal Information

| THERMAL METRIC ⁽¹⁾ | | TRF1208x | UNIT |
|-------------------------------|--|------------|------|
| | | RPV (WQFN) | |
| | | 12 PINS | |
| R _{θJA} | Junction-to-ambient thermal resistance | 66.9 | °C/W |
| R _{θJC(top)} | Junction-to-case (top) thermal resistance | 64.3 | °C/W |
| R _{θJB} | Junction-to-board thermal resistance | 17.4 | °C/W |
| Ψ _{JT} | Junction-to-top characterization parameter | 1.7 | °C/W |
| Ψ _{JB} | Junction-to-board characterization parameter | 17.2 | °C/W |
| R _{θJC(bot)} | Junction-to-case (bottom) thermal resistance | 9.0 | °C/W |

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics: TRF1208

at $T_A = 25^\circ\text{C}$, $V_{DD} = 3.3\text{ V}$, $50\text{-}\Omega$ single-ended input, and $100\text{-}\Omega$ differential output (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|-----------------------|--|---|-----|-----------|-----|------|
| AC PERFORMANCE | | | | | | |
| SSBW | Small-signal 3-dB bandwidth | $V_O = 0.1 V_{PP}$ | | 11 | | GHz |
| LSBW | Large-signal 3-dB bandwidth | $V_O = 1 V_{PP}$ | | 11 | | GHz |
| 1-dB BW | Bandwidth for 1-dB flatness | | | 8 | | GHz |
| S21 | Power gain | $f = 2\text{ GHz}$ | | 16 | | dB |
| S11 | Input return loss | $f = 10\text{ MHz to }8\text{ GHz}$ | | -10 | | dB |
| S12 | Reverse isolation | $f = 2\text{ GHz}$ | | -35 | | dB |
| Imb _{GAIN} | Gain imbalance | $f = 10\text{ MHz to }8\text{ GHz}$ | | ± 0.3 | | dB |
| Imb _{PHASE} | Phase imbalance | $f = 10\text{ MHz to }8\text{ GHz}$ | | ± 3 | | ° |
| CMRR | Common-mode rejection ratio ⁽¹⁾ | $f = 2\text{ GHz}$ | | -45 | | dB |
| HD2 | Second-order harmonic distortion | $f = 0.5\text{ GHz}, P_O = +3\text{ dBm}$ | | -70 | | dBc |
| | | $f = 2\text{ GHz}, P_O = +3\text{ dBm}$ | | -65 | | |
| | | $f = 6\text{ GHz}, P_O = +3\text{ dBm}$ | | -52 | | |
| | | $f = 8\text{ GHz}, P_O = +3\text{ dBm}$ | | -45 | | |
| HD3 | Third-order harmonic distortion | $f = 0.5\text{ GHz}, P_O = +3\text{ dBm}$ | | -68 | | dBc |
| | | $f = 2\text{ GHz}, P_O = +3\text{ dBm}$ | | -63 | | |
| | | $f = 6\text{ GHz}, P_O = +3\text{ dBm}$ | | -56 | | |
| | | $f = 8\text{ GHz}, P_O = +3\text{ dBm}$ | | -63 | | |
| IMD2 | Second-order intermodulation distortion | $f = 0.5\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -73 | | dBc |
| | | $f = 2\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -69 | | |
| | | $f = 6\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -56 | | |
| | | $f = 8\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -45 | | |
| IMD3 | Third-order intermodulation distortion | $f = 0.5\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -75 | | dBc |
| | | $f = 2\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -84 | | |
| | | $f = 6\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -72 | | |
| | | $f = 8\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | -51 | | |
| OP1dB | Output 1-dB compression point | $f = 0.5\text{ GHz}$ | | 11 | | dBm |
| | | $f = 2\text{ GHz}$ | | 15 | | |
| | | $f = 6\text{ GHz}$ | | 12.5 | | |
| | | $f = 8\text{ GHz}$ | | 7.5 | | |
| OIP2 | Output second-order intercept point | $f = 0.5\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | 68 | | dBm |
| | | $f = 2\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | 63 | | |
| | | $f = 6\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | 55 | | |
| | | $f = 8\text{ GHz}, P_O = -4\text{ dBm per tone (10-MHz spacing)}$ | | 42 | | |

6.5 Electrical Characteristics: TRF1208 (continued)

 at $T_A = 25^\circ\text{C}$, $V_{DD} = 3.3\text{ V}$, 50- Ω single-ended input, and 100- Ω differential output (unless otherwise noted)

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---------------------|---|--|------|-----|-----|---------------|
| OIP3 | Output third-order intercept point | f = 0.5 GHz, $P_O = -4\text{ dBm}$ per tone (10-MHz spacing) | | 34 | | dBm |
| | | f = 2 GHz, $P_O = -4\text{ dBm}$ per tone (10-MHz spacing) | | 37 | | |
| | | f = 4 GHz, $P_O = -4\text{ dBm}$ per tone (10-MHz spacing) | | 34 | | |
| | | f = 6 GHz, $P_O = -4\text{ dBm}$ per tone (10-MHz spacing) | | 30 | | |

7 Detailed Description

7.1 Overview

The TRF1208 is a very high-performance amplifier optimized for radio frequency (RF) and intermediate frequency (IF) with signal bandwidths up to 11 GHz. The low frequency response is limited only by the ac-coupling capacitor on the PCB. The device is designed for ac-coupled applications that require a single-ended to differential conversion when driving an analog-to-digital converter (ADC). The device has a two-stage architecture and provides approximately 16 dB of gain for the TRF1208 and approximately 10 dB of gain for TRF1208B when configured for single-ended inputs driven from a 50-Ω source. This device also works as a differential-to-single-ended amplifier to act as a DAC buffer.

This device does not require any pullup or pulldown components on the PCB, and thereby simplifies the layout and provides the highest performance over the entire bandwidth.

The input and output are ac coupled. The TRF1208 is powered with 3.3-V supply. A power-down feature is also available.

7.2 Functional Block Diagram

The following figure shows the functional block diagram of TRF1208. The device essentially has two stages with a voltage-feedback configuration.

7.3 Feature Description

7.3.1 Fully-Differential Amplifier

The TRF1208 is a voltage-feedback fully differential amplifier (FDA) with a fixed gain by architecture. The TRF1208 operates best as a single-ended to differential amplifier by terminating the INM pin with a 50- Ω resistor and driving the INP pin directly with no external components.

This amplifier has nonlinearity cancellation circuits that provide excellent linearity performance over a wide range of frequencies.

The output of the amplifier has a low dc impedance. Therefore, if required, the output of the amplifier can be matched to a load if required by adding the appropriate series resistors or attenuator pad.

7.3.2 Single Supply Operation

The TRF1208 operates on a single 3.3-V supply. The input and output bias voltages are set internally. Therefore, ac-couple the signal path on the board at all four RF input and output pins. Single-supply operation simplifies the board design.

7.4 Device Functional Modes

The TRF1208 has two functional modes: active and power-down. These functional modes are controlled by the PD pin as described in the previous section.

7.4.1 Power-Down Mode

The device features a power-down option. The PD pin is used to power down the amplifier. This pin supports both 1.8-V and 3.3-V digital logic, and is referenced to ground. A logic 1 turns the device off and places the device into a low-quiescent-current state.

When disabled, the signal path is still present through the internal circuits. Input signals applied to a disabled device still appear at the outputs at some lower level through this path, as is the case for any disabled feedback amplifier.

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Driving a High-Speed ADC

A common application of the TRF1208 is to drive a high-speed ADC, such as the [ADC12DJ5200RF](#) or [AFE7950](#) that have differential input. Conventionally, passive baluns are used to drive Gsps ADCs because of nonavailability of high-bandwidth, linear amplifiers. The TRF1208 is an active balun that has excellent bandwidth flatness, gain, and phase imbalance comparable to or exceeding costly passive baluns.

Figure 8-1 shows a typical interface circuit for the ADC12DJ5200RF. Depending on the ADC and system requirement, this circuit can be simplified or can be more complex.

Figure 8-1. Interfacing With the ADC12DJ5200RF

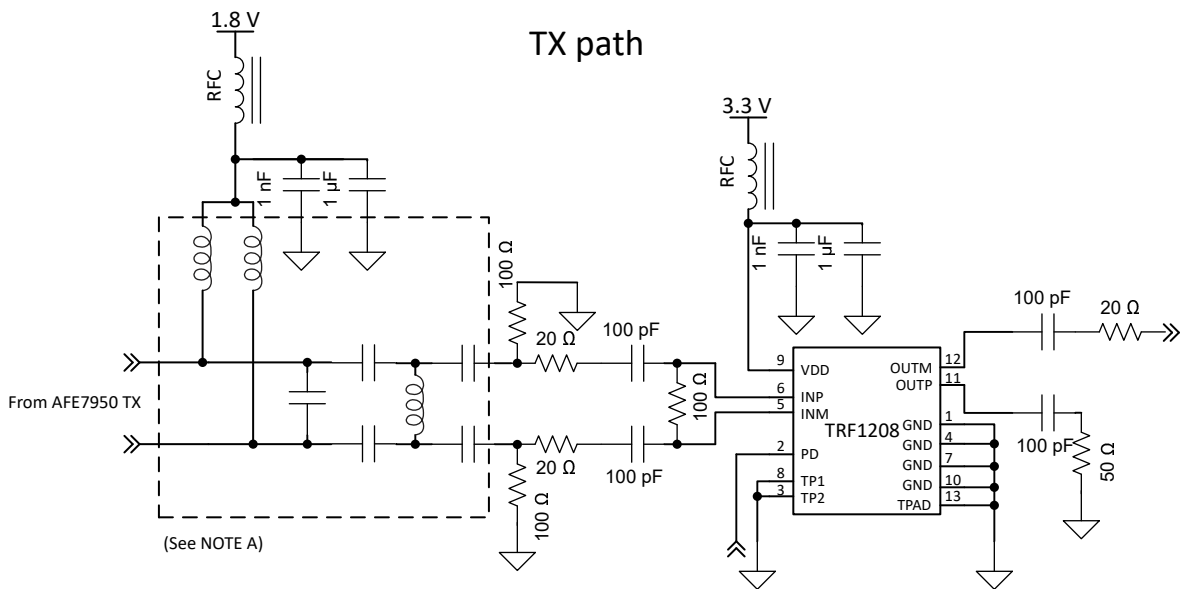

The figure shows two sections of the circuit between the driver amp and the ADC: namely, the matching pad (or attenuator pad) and the antialiasing filter. Use small, form-factor, RF-quality, passive components for these circuits. The output swing of the TRF1208 is designed to drive these ADCs full-scale, while at the same time not overdrive the device. This functionality avoids the need for any voltage limiting device at the ADC.

The following figures show typical interface circuits for AFE7950 RX and TX chains in which TRF1208 is the S2D and D2S amplifier, respectively.

- A. AFE matching network – component type (whether L or C) and values depend on the channel (A, B, C, D, FB1, FB2) and frequency band.

Figure 8-2. Interfacing With the AFE7950 RX

- A. AFE matching network – component type (whether L or C) and values depend on the channel (A, B, C, D) and frequency band.

Figure 8-3. Interfacing With the AFE7950 TX

8.1.2 Calculating Output Voltage Swing

This section gives a quick reference of the output voltage swings for different input power levels. In this example, the output is terminated with a 100-Ω differential load and a power gain of 16 dB is assumed.

Figure 8-4. Power and Voltage Levels

$$\text{Voltage gain} = 20 \times \log(V_O / V_I) \tag{1}$$

$$\text{Power gain} = 10 \times \log(P_O / P_I) = 10 \times \log((V_O^2 / 100) / (V_I^2 / 50)) = 20 \times \log(V_O / V_I) - 3 \text{ dB} \tag{2}$$

Table 8-1. Output Voltage Swings for Different Input Power Levels

| INPUT | | OUTPUT (TRF1208) | | OUTPUT (TRF1208B) | |
|----------------------|-----------------------------------|----------------------|-----------------------------------|----------------------|-----------------------------------|
| P _I (dBm) | V _I (V _{PP}) | P _O (dBm) | V _O (V _{PP}) | P _O (dBm) | V _O (V _{PP}) |
| -20 | 0.063 | -4 | 0.564 | -10 | 0.283 |
| -15 | 0.112 | 1 | 1.004 | -5 | 0.503 |
| -10 | 0.2 | 6 | 1.785 | 0 | 0.894 |
| -9 | 0.224 | 7 | 2.002 | 1 | 1.004 |

8.1.3 Thermal Considerations

The TRF1208 is available in a 2-mm × 2-mm, WQFN-FCRLF package that has excellent thermal properties. Connect the thermal pad underneath the chip to a ground plane. Short the ground plane to the other ground pins of the chip at four corners, if possible, to allow heat propagation to the top layer of PCB. Use a thermal via that connects the thermal pad plane on the top layer of the PCB to the inner layer ground planes to allow heat propagation to the inner layers.

The total power dissipation needs to be limited to keep the device junction temperature below 150°C for instantaneous power and below 125°C for continuous power.

8.2 Typical Applications

An example of TRF1208 acting as ADC and DAC amplifiers for AFE7950 is explained in this section.

8.2.1 TRF1208 in Receive Chain

This section describes an RF receiver chain in which TRF1208 is working as a S2D (SE-to-diff) amp and driving a receive channel of AFE7950.

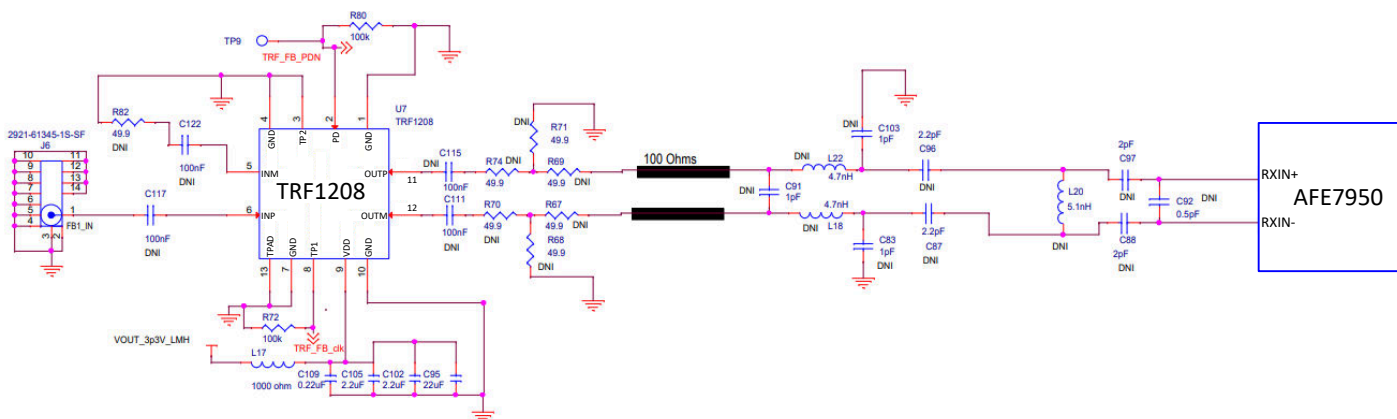

Figure 8-5. TRF1208 in a Receive Chain With the AFE7950

The previous figure is a generic schematic of a design in which TRF1208 drives an AFE7950 receive channel. The exact values of the components depend on the frequency band for which the AFE7950 front-end is matched.

8.2.1.1 Design Requirements

The AFE7950 channel is required to be matched to 8.2 GHz.

8.2.1.2 Detailed Design Procedure

The TRF1208 is configured as an S2D amplifier. The section close to TRF1208 output is an attenuator pad that is meant for robust matching. The section close to AFE7950 is the matching network for the AFE that is channel dependent. The matching components are chosen based on the AFE return-loss data and some trial and error because the manufactured board parameters can influence the exact component values

Table 8-2 shows the bill of materials (BOM) values of the design for a channel that is matched to center frequency of 8.2 GHz.

Table 8-2. Component Values of RX Chain With Center Frequency = 8.2 GHz

TRF1208

SBOS972C – OCTOBER 2021 – REVISED AUGUST 2023

8.2.2 TRF1208 in a Transmit Chain

This section describes an RF transmit chain in which the TRF1208 works as a differential-to-single-ended converter that converts the DAC output of the AFE7950 into a single-ended signal that drives a PA or a mixer.

Figure 8-6. TRF1208 in a Transmit Chain With the AFE7950

The previous figure is a generic schematic of a design in which the TRF1208 is used with the AFE7950 in the transmit chain. The exact values of the components depend on the frequency band for which the AFE7950 front-end is matched.

8.2.2.1 Design Requirements

The AFE7950 channel is required to be matched to 8.2 GHz.

8.2.2.2 Detailed Design Procedure

The TRF1208 is configured as a D2S amplifier. The OUTM pin of the TRF1208 is terminated with 50 Ω and OUTP is taken out as the SE output. The section close to TRF1208 input is an attenuator pad that is meant for robust matching. The section close to AFE7950 is the matching network for the AFE, which is channel dependent. Choose matching components based on the AFE return-loss data and some trial and error because the board parameters can influence the exact values.

Table 8-3 shows the BOM values of the design for a channel that is matched to center frequency of 8.2 GHz.

Table 8-3. Component Values of TX Chain With Center Frequency = 8.2 GHz

8.3 Power Supply Recommendations

The TRF1208 requires a single 3.3-V supply. Supply decoupling is critical to high-frequency performance. Typically two or three capacitors are used for supply decoupling. For the lowest-value capacitor, use a small, form-factor component that is placed closest to the VDD pin of the device. Use a bulk decoupling capacitor of a larger value and size that can be placed next to the small capacitor. Additional layout recommendations are given in the *Layout* section.

8.4 Layout

8.4.1 Layout Guidelines

The TRF1208 is a wideband, voltage-feedback amplifier with approximately 10 dB or 16 dB of gain. When designing with a wideband RF amplifier with relatively high gain, make sure to take certain board layout precautions to maintain stability and optimized performance. Use a multilayer board to maintain signal and power integrity and thermal performance. [Figure 8-7](#) shows an example of a good layout. In this figure, only the top layer is shown.

Route the RF input and output lines as grounded coplanar waveguide (GCPW) lines. For the second layer, use a continuous ground layer without any ground-cuts near the amplifier area. Match the output differential lines in length to minimize phase imbalance. Use small footprint passive components wherever possible. Also take care of the input side layout. Use a 50-ohm line for the INP routing, and make sure the termination on INM pin has low parasitics by placing the ac-coupling capacitor and the 50- Ω resistor very close to the device. Use an RF-quality, 50- Ω resistor for termination. Make sure that the ground planes on the top and internal layers are well stitched with vias.

Place thermal vias under the device that connect the top thermal pad with ground planes in the inner layers of the PCB. For improved heat dissipation, connect the thermal pad to the top layer ground plane through the ground pins (see the *Layout Example* in the next section).

8.4.2 Layout Example

Figure 8-7. Layout Example: Placement and Top Layer Layout

The TRF1208 can be evaluated using the TRF1208 EVM board, which can be ordered from [TRF1208](#) product folder. Additional information about the evaluation board construction and test setup is given in the [TRF1208 EVM User's Guide](#).

9 Device and Documentation Support

9.1 Device Support

9.1.1 Third-Party Products Disclaimer

TI'S PUBLICATION OF INFORMATION REGARDING THIRD-PARTY PRODUCTS OR SERVICES DOES NOT CONSTITUTE AN ENDORSEMENT REGARDING THE SUITABILITY OF SUCH PRODUCTS OR SERVICES OR A WARRANTY, REPRESENTATION OR ENDORSEMENT OF SUCH PRODUCTS OR SERVICES, EITHER ALONE OR IN COMBINATION WITH ANY TI PRODUCT OR SERVICE.

9.2 Documentation Support

9.2.1 Related Documentation

For related documentation, see the following:

9.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

| Device | Package Type | Package Drawing | Pins | SPQ | Reel Diameter (mm) | Reel Width W1 (mm) | A0 (mm) | B0 (mm) | K0 (mm) | P1 (mm) | W (mm) | Pin1 Quadrant |
|--------------|--------------|-----------------|------|------|--------------------|--------------------|---------|---------|---------|---------|--------|---------------|
| TRF1208BRPVR | WQFN-HR | RPV | 12 | 3000 | 178.0 | 8.4 | 2.25 | 2.25 | 1.0 | 4.0 | 8.0 | Q1 |
| TRF1208RPVR | WQFN-HR | RPV | 12 | 3000 | 178.0 | 8.4 | 2.25 | 2.25 | 1.0 | 4.0 | 8.0 | Q1 |
| TRF1208RPVT | WQFN-HR | RPV | 12 | 250 | 178.0 | 8.4 | 2.25 | 2.25 | 1.0 | 4.0 | 8.0 | Q1 |

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

| Device | Package Type | Package Drawing | Pins | SPQ | Length (mm) | Width (mm) | Height (mm) |
|--------------|--------------|-----------------|------|------|-------------|------------|-------------|
| TRF1208BRPVR | WQFN-HR | RPV | 12 | 3000 | 205.0 | 200.0 | 33.0 |
| TRF1208RPVR | WQFN-HR | RPV | 12 | 3000 | 205.0 | 200.0 | 33.0 |
| TRF1208RPVT | WQFN-HR | RPV | 12 | 250 | 205.0 | 200.0 | 33.0 |

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

EXAMPLE BOARD LAYOUT

RPV0012A

WQFN-FCRLF - 0.7 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 30X

4225258/B 04/2020

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
5. Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.

EXAMPLE STENCIL DESIGN

RPV0012A

WQFN-FCRLF - 0.7 mm max height

PLASTIC QUAD FLATPACK - NO LEAD

SOLDER PASTE EXAMPLE
BASED ON 0.125 MM THICK STENCIL
SCALE: 30X

EXPOSED PAD 13
90% PRINTED SOLDER COVERAGE BY AREA UNDER PACKAGE

4225258/B 04/2020

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](https://www.ti.com) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
