

**Current 1A High Voltage 40V Low Power LDO****SSP7903****General Description**

The SSP7903 series is a group of positive voltage output, three-pin regulators, that provide a high current even when the input/output voltage differential is small. Low power consumption and high accuracy is achieved through CMOS and laser trimming technologies.

The SSP7903 consists of a high-precision voltage reference, an error amplification circuit, and a current limited output driver. Transient response to load variations have improved in comparison to the existing series.

**Features**

- Low Quiescent Current: typical 1.6 $\mu$ A
- Temperature Stability:  $\pm 50$ ppm/ $^{\circ}$ C
- High input voltage: 40V
- Output voltage accuracy: tolerance  $\pm 2\%$
- Low temperature coefficient
- Dropout Voltage: 20mV@IOUT=10mA
- Maximum Output Current: 1A
- The chip has the functions of overheat protection, over current protection and output short circuit protection
- Packages: SOT89-3L, SOT223 and TO252

**Applications**

- Industrial control
- Smart meters, instruments and meters
- Battery supply set
- Wireless communication equipment
- Automotive electronics
