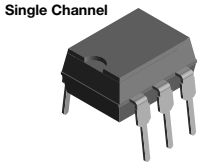
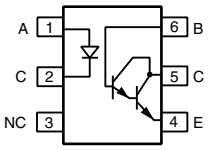
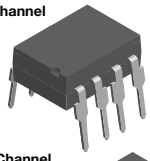
Optocoupler, Photodarlington Output, (Single, Dual, Quad Channel)

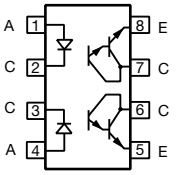
Single Channel



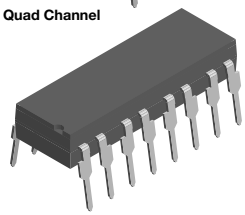


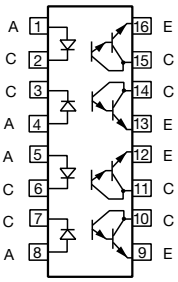
Dual Channel



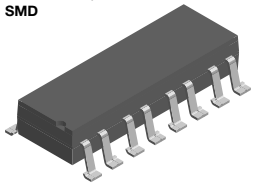


Quad Channel





SMD



DESCRIPTION

The IL30 single, ILD55 dual, and ILQ30, ILQ31, ILQ55 quad are optically coupled isolators with gallium arsenide infrared emitters and silicon photodarlington sensors. Switching can be achieved while maintaining a high degree of isolation between driving and load circuits, with no crosstalk between channels. These optocouplers can be used to replace reed and mercury relays with advantages of long life, high speed switching and elimination of magnetic fields.

The ILD55 is designed to reduce board space requirements in high density applications.

FEATURES

- 125 mA load current rating
- Fast rise time, 10 µs
- Fast fall time, 35 µs
- Single, dual, and quad channel
- Solid state reliability
- Standard DIP packages
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

Pb-free

Note

- Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.
