# KEVET a YAGEO company

# HiQ-CBR Automotive Series, COG Dielectric, Low ESR, 50 VDC, 1 MHz - 50 GHz (RF & Microwave)

### **Overview**

KEMET's HiQ CBR Automotive RF Capacitor Series features a copper electrode BME (Base Metal Electrode) system that offers ultra-low ESR and High Q in the VHF, UHF, and microwave frequency bands. Low ESR allows for higher RF currents which are ideal for applications such as V2X, safety systems, power train and automotive communication systems.

CBR Series capacitors exhibit no change in capacitance with respect to time and voltage, and boast a negligible change in capacitance with reference to ambient temperature.

KEMET's HiQ CBR RF capacitors are characterized using Modelithics $^{\text{TM}}$  substrate scalable models and is available in most EDA software. Contact KEMET Sales for details on accessing models.

#### **Benefits**

- · AEC-Q200 Qualified
- Ultra-low ESR and High Q
- · High SRF
- · High thermal stability
- 1 MHz to 50 GHz frequency range
- Operating temperature range of -55°C to +125°C
- · Base metal electrode (BME) dielectric system
- Pb-free and RoHS compliant
- 0402 and 0603 case sizes (inches)
- DC voltage rating of 50 V
- Capacitance offerings ranging from 0.1 pF up to 100 pF
- Available capacitance tolerances of ±0.05 pF, ±0.1 pF, ±0.25 pF, ±0.5 pF, ±1%, ±2%, and ±5%
- · Negligible capacitance change with respect to temperature
- 100% pure matte tin-plated termination finish allowing for excellent solderability

## **Applications**

- V2X
- · Safety Systems
- Power Train
- Automotive Communication Systems
- Bypass, coupling, filtering, impedance matching, DC blocking

### **Ordering Information**

| 13" Reel       | AUT07411                            |  |  |  |  |

# **Environmental Compliance**

Lead (Pb)-free, RoHS, and REACH compliant without exemptions

# **Qualification/Certification**

Automotive grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. For additional information regarding the Automotive Electronics Council and AEC-Q200, please visit their website at www.aecouncil.com.

### **Automotive C-Spec Information**

KEMET automotive grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. These products are supported by a Product Change Notification (PCN) and Production Part Approval Process warrant (PPAP).

Automotive products offered through our distribution channel have been assigned an inclusive ordering code C-Spec, "AUTO." This C-Spec was developed in order to better serve small and medium-sized companies that prefer an automotive grade component without the requirement to submit a customer Source Controlled Drawing (SCD) or specification for review by a KEMET engineering specialist. This C-Spec is therefore not intended for use by KEMET OEM automotive customers and are not granted the same "privileges" as other automotive C-Specs. Customer PCN approval and PPAP request levels are limited (see details below.)

#### **Product Change Notification (PCN)**

The KEMET product change notification system is used to communicate primarily the following types of changes:

- Product/process changes that affect product form, fit, function, and/or reliability
- · Changes in manufacturing site
- Product obsolescence

| KEMET Automotive  | Customer Notifica      | Days Prior To |                  |  |
|---|------------------------|---------------|------------------|--|
| C-Spec  | Process/Product change | Obsolescence* | Implementation   |  |
| KEMET assigned <sup>1</sup> Yes (with approval and sign o |                        | Yes           | 180 days minimum |  |
| AUT0  | Yes (without approval) | Yes           | 90 days minimum  |  |

<sup>&</sup>lt;sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

#### **Production Part Approval Process (PPAP)**

The purpose of the Production Part Approval Process is:

- To ensure that supplier can meet the manufacturability and quality requirements for the purchased parts.
- To provide the evidence that all customer engineering design records and specification requirements are properly understood and fulfilled by the manufacturing organization.
- To demonstrate that the established manufacturing process has the potential to produce the part.

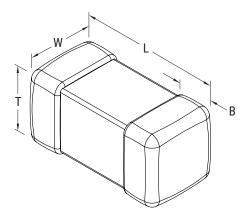

| KEMET Automotive            | PPAP (Product Part Approval Process) Level |   |   |   |   |  |  |  |  |
|-----------------------------|--|---|---|---|---|--|--|--|--|
| C-Spec                      | 1  | 2 | 3 | 4 | 5 |  |  |  |  |
| KEMET assigned <sup>1</sup> | •  | • | • | • | • |  |  |  |  |
| AUT0                        |  |   | 0 |   |   |  |  |  |  |

<sup>&</sup>lt;sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

- Part number specific PPAP available
- Product family PPAP only

## **Dimensions - Millimeters (Inches)**

### **Electrical Parameters/Characteristics**

| Item  | Parameters/Characteristics   |
|---|--|
| Operating Temperature Range   | -55°C to +125°C  |
| Capacitance Change with Reference to<br>+25°C and 0 VDC Applied (TCC) | ±30 ppm/°C   |
| Aging Rate (Maximum % Capacitance Loss/Decade Hour)                   | 0%   |
| <sup>1</sup> Dielectric Withstanding Voltage (DWV)                    | 250% of rated voltage<br>(5 ±1 seconds and charge/discharge not exceeding 50 mA)                             |
| <sup>2</sup> Quality Factor (Q):                                      | ≥ 1,000 for capacitance values ≥ 30 pF<br>≥ 400 + 20C for capacitance values < 30 pF (C = Capacitance in pF) |
| Insulation Resistance (IR) Limit at 25°C                              | 10 GΩ minimum (rated voltage applied for 120 ±5 seconds)   |

<sup>&</sup>lt;sup>1</sup> DWV is the voltage a capacitor can withstand (survive) for a short period of time. It exceeds the nominal and continuous working voltage of the capacitor.

 $<sup>^2</sup>$  Capacitance and Quality Factor (Q) measured at 1 MHz ±100 kHz and 1.0 ±0.2  $V_{rms}$

**Density Level A:** For low-density product applications. Recommended for wave solder applications and provides a wider process window for reflow solder processes. KEMET only recommends wave soldering of 0603(1608) and 0805 (2012) case sizes.

**Density Level B:** For products with a moderate level of component density. Provides a robust solder attachment condition for reflow solder processes. **Density Level C:** For high component density product applications. Before adapting the minimum land pattern variations the user should perform qualification testing based on the conditions outlined in IPC Standard 7351 (IPC-7351).

Image below based on Density Level B for an EIA 1608 case size.

# **Soldering Process**

#### **Recommended Soldering Technique:**

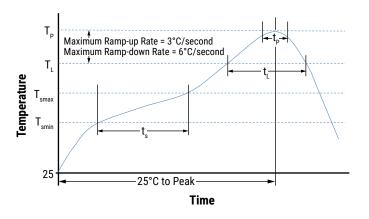

- Solder wave or solder reflow for EIA case sizes 0603, 0805 and 1206
- · All other EIA case sizes are limited to solder reflow only

#### **Recommended Reflow Soldering Profile:**

KEMET's families of surface mount multilayer ceramic capacitors (SMD MLCCs) are compatible with wave (single or dual), convection, IR or vapor phase reflow techniques. Preheating of these components is recommended to avoid extreme thermal stress. KEMET's recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/ J-STD-020 standard for moisture sensitivity testing. These devices can safely withstand a maximum of three reflow passes at these conditions.

| Profile Feature  | Termination Finish    |                       |  |  |  |
|--|-----------------------|-----------------------|--|--|--|

Note 1: All temperatures refer to the center of the package, measured on the capacitor body surface that is facing up during assembly reflow.

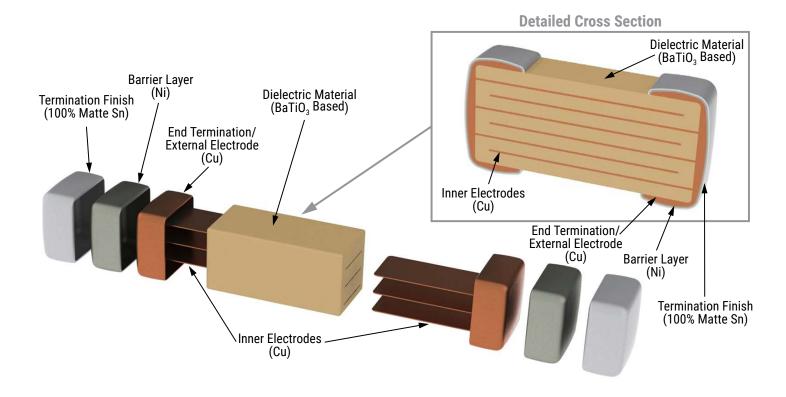

### **Storage and Handling**

Ceramic chip capacitors should be stored in normal working environments. While the chips themselves are quite robust in other environments, solderability will be degraded by exposure to high temperatures, high humidity, corrosive atmospheres, and long term storage. In addition, packaging materials will be degraded by high temperature – reels may soften or warp, and tape peel force may increase. KEMET recommends that maximum storage temperature not exceed 40°C, and maximum storage humidity not exceed 70% relative humidity. In addition, temperature fluctuations should be minimized to avoid condensation on the parts, and atmospheres should be free of chlorine and sulfur bearing compounds. For optimized solderability, chip stock should be used promptly, preferably within 1.5 years of receipt.

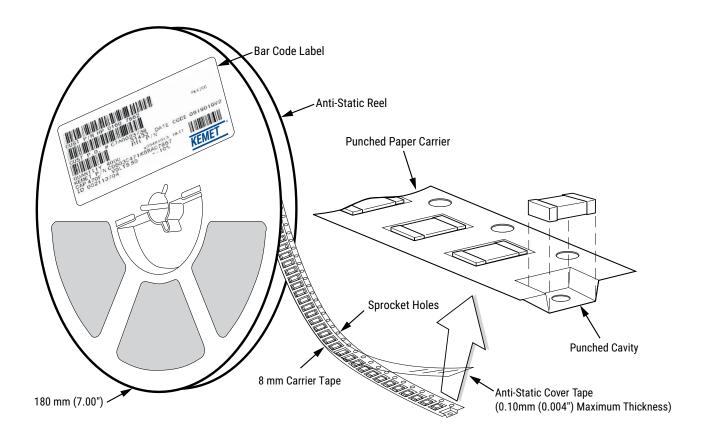

#### Construction

### **Tape & Reel Packaging Information**

KEMET offers RF and Microwave Multilayer Ceramic Chip Capacitors packaged in 8 mm tape on 7" reels in accordance with EIA Standard 481. This packaging system is compatible with all tape-fed automatic pick and place systems.

**Table 4 – Carrier Tape Configuration (mm)** 

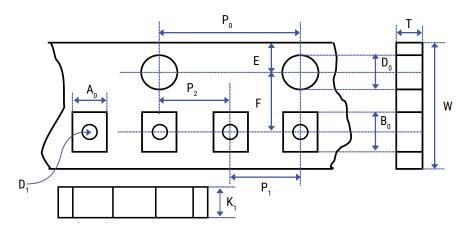

| EIA Case Size | Tape Size (W)* | Lead Space (P <sub>1</sub> )* |
|---------------|----------------|-------------------------------|
| 0402          | 8              | 2                             |
| 0603          | 8              | 4                             |

<sup>\*</sup>Refer to Figure 1 for W and  $P_1$  carrier tape reference locations.

<sup>\*</sup>Refer to Table 6 for tolerance specifications.

|  | 1.50±0.10<br>(0.06±0.004)                  | 2.30±0.10<br>(0.09±0.004)  |                                  |                           | 0.95±0.05<br>(0.037±0.002) |                           |   |       |

<sup>2.</sup> The tape with or without components shall pass around R without damage (see Figure 3).

### **Packaging Information Performance Notes**

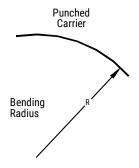

- 1. Cover Tape Break Force: 1.0 Kg minimum.
- 2. Cover Tape Peel Strength: The total peel strength of the cover tape from the carrier tape shall be:

| Tape Width   | Peel Strength                    |  |
|--------------|----------------------------------|--|
| 8 mm         | 0.1 to 1.0 newton (10 to 100 gf) |  |
| 12 and 16 mm | 0.1 to 1.3 newton (10 to 130 gf) |  |

The direction of the pull shall be opposite the direction of the carrier tape travel. The pull angle of the carrier tape shall be 165° to 180° from the plane of the carrier tape. During peeling, the carrier and/or cover tape shall be pulled at a velocity of 300 ±10 mm/minute.

**3. Labeling:** Bar code labeling (standard or custom) shall be on the side of the reel opposite the sprocket holes. *Refer to EIA Standards 556 and 624*.

### **Disclaimer**

YAGEO Corporation and its affiliates do not recommend the use of commercial, automotive, and/or COTS grade products for high reliability applications or manned space flight.

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
