#### Overload capability

Low Overload (LO)

110% base load current IL for 60 s in a 300 s cycle time

High Overload (HO)

Communication

 $150\%\,x$  base load current IH for 60 s within a 600 s cycle time

| General tech. specifications      |  |  |
|-----------------------------------|--|--|
| Power factor $\lambda$            | 0.75 0.93                              |  |
| Offset factor $\cos\phi$          | 0.96                                   |  |
| Efficiency η                      | 0.98                                   |  |
| Sound pressure level (1m)         | 74 dB                                  |  |
| Power loss 3)                     | 6.910 kW                               |  |
| Filter class (integrated)         | RFI suppression filter for Category C3 |  |
| EMC category (with accessories)   | Category C3                            |  |

| Converter losses to IEC61800-9-2*                    |        |
|--|--------|
| Efficiency class                                     | IE2    |
| Comparison with the reference converter (90% / 100%) | 36.0 % |

The percentage values show the losses in relation to the rated apparent power of the converter.

The diagram shows the losses for the points (as per standard IEC61800-9-2) of the relative torque generating current (I) over the relative motor stator frequency (f). The values are valid for the basic version of the converter without options/components.

\*converted values

<sup>1)</sup> The output current and HP ratings are valid for the voltage range 550V-600V

<sup>&</sup>lt;sup>3)</sup>Typical value. More information can be found in the element group "Converter losses to IEC 61800-9-2" in this datasheet.
