	Size (W×H×D)	(*11) mm	75 x 34 x 160 ( Refer to Outline Drawing )					

\*Read instruction manual carefully, before using the power supply unit.

(\*1) At 100VAC, Ta=25°C, nominal output voltage and maximum output power.

(\*2) For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 - 120VAC(50/60Hz).

(\*3) Please refer to Fig. A for measurement of line & load regulation and ripple voltage.

(\*4) For start up at low ambient temperature and low input voltage, output ripple noise might not meet specification.

However, there is no overshoot at start up and output ripple noise specification can be met after one second.

(\*5) 85 - 132VAC, constant load.

(\*6) No load-Full load, constant input voltage.

(\*7) 3.3, 5V model: Constant current limit and hiccup with automatic recovery.

12 - 48V model: Constant current limit with automatic recovery.

Avoid to operate at over load or short circuit condition for more than 30seconds.

(\*8) OVP circuit will shut the output down, manual reset (Re power on).

(\*9) Measured by the each measuring method of UL, CSA, EN and DENAN(at 60Hz), Ta=25°C.

(\*10) Ratings

- Derating at standard mounting. Refer to output derating curve(A242-01-02\_).

- Load (%) is percent of maximum output power or maximum output current, whichever is greater.

(\*11) Not include lead length on solder side.

(\*12) Inrush Current suppressors type. Limits vary according to ambient temperature and in case of re-entry.

(\*13) /FV option is for fixed output voltage.
