

## Features

- Operating voltage: 2.2V~5.5V
- Low standby current
- Auto-calibration
- Reliable touch detections
- Standby and normal operating modes
- Maximum key on duration time detection
- Adaptive voltage drop function
- Level Hold, selectable active level-low or high
- NMOS output with internal pull-high/CMOS-Direct Output
- Both serial interface and parallel outputs
- Sensitivity adjustment using an external capacitor
- Minimal number of external components

## General Description

The BS81x is a series of 1~16 key touch key devices which can detect human body contact using external touch pads. The high level of device integration enable applications to be implemented with a minimum number of external components.

The BS81x series devices are equipped with serial or parallel interfaces to allow easy communication with an external MCU for device setup and for touch pin monitoring purposes. Special internal circuitry is also employed to ensure excellent power noise rejection to reduce the possibility of false detections, increasing the touch switch application reliability under adverse environmental conditions.

With auto-calibration, low standby current, excellent resistance to voltage fluctuation and other features, this range of touch key devices provide a simple and effective means of implementing touch key operation in a wide variety of applications.

## Selection Table

For this device series, most of the feature are similar. The BS818C-3, BS8112C-3 and BS8116C-3 provide I<sup>2</sup>C function. The BS814C-2 and BS818C-2 include a serial interface function while the BS811C-1, BS812C-1, BS813C-1, BS814C-1 and BS816C-1 have parallel outputs. Meanwhile the BS818C-3, BS8112C-3 and BS8116C-3 can set up some options and the sensitivity through the I<sup>2</sup>C communication interface and the BS816C-1 and BS818C-2 include two hardware options. The following table summarizes the main characteristics of each device.

Part No.	Touch Key	V <sub>DD</sub>	Standby Current at 3V		Key Output Type	Package	Serial Interface
			One-key Wake-up	Any-key Wake-up			
BS811C-1	1-Key	2.2V~5.5V	—	2.5μA	Active Low	SOT23-6	—
BS812C-1	2-Key	2.2V~5.5V	—	3.5μA	Active Low	SOT23-6	—
BS813C-1	3-Key	2.2V~5.5V	—	4.0μA	Active Low	8SOP	—
BS814C-1	4-Key	2.2V~5.5V	—	5.0μA	Active Low	10MSOP	—
BS814C-2	4-Key	2.2V~5.5V	—	5.0μA	—	8SOP	√
BS816C-1	6-Key	2.2V~5.5V	—	7.5μA/3.5μA*	Active Low/ Active High*	16NSOP	—
BS818C-2	8-key	2.2V~5.5V	—	8.5μA/3.5μA*	Binary*	16NSOP	√
BS818C-3	8-Key	2.2V~5.5V	3.5μA/2.5μA**	8.0μA/3.5μA**	I <sup>2</sup> C	16NSOP	√
BS8112C-3	12-Key	2.2V~5.5V	4.0μA/2.5μA**	12.0μA/4.5μA**	I <sup>2</sup> C	16NSOP, 20SSOP	√
BS8116C-3	16-Key	2.2V~5.5V	4.0μA/2.5μA**	16.0μA/5.5μA**	I <sup>2</sup> C	20/24SSOP	√

Note: 1. The BS81x series devices have enhanced noise rejection performance.

2. \* pin selected option.

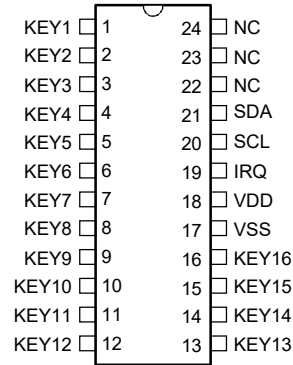

3. \*\* option by I<sup>2</sup>C communication.

## Pin Assignment

**BS8116C-3  
20 SSOP-A**

**BS8116C-3  
24 SSOP-A**

## Pin Description

### BS811C-1

Pin Name	I/O	Description
Key	Input	Touch key input pin, unused touch keys require grounding
Kout	NMOS output	Touch key output pin with internal pull-high
VSS	—	Negative power supply, ground
VDD	—	Positive power supply
NC	—	Not Connected

### BS812C-1

Pin Name	I/O	Description
Key1~Key2	Input	Touch key input pin, unused touch keys require grounding
Kout1~Kout2	NMOS output	Touch key output pin with internal pull-high
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

### BS813C-1

Pin Name	I/O	Description
Key1~Key3	Input	Touch key input pin, unused touch keys require grounding
Kout1~Kout3	NMOS output	Touch key output pin with internal pull-high
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

### BS814C-1

Pin Name	I/O	Description
Key1~Key4	Input	Touch key input pin, unused touch keys require grounding
Kout1~Kout4	NMOS output	Touch key output pin with internal pull-high
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

**BS814C-2**

Pin Name	I/O	Description
Key1~Key4	Input	Touch key input pin, unused touch keys require grounding
Clock	Input	2-wire series interface Clock input with internal pull-high
Data	NMOS output	2-wire series interface Date NMOS output with internal pull-high
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

**BS816C-1**

Pin Name	I/O	Description
Key1~Key6	Input	Touch key input pin, unused touch keys require grounding
OMS	Input	Output Mode Selection Open=NMOS output (low active) Grounded=CMOS-Direct output (high active)
LSC	Input	Power-saving mode selection Open= General power-saving mode Grounded=More power-saving mode
Kout1~Kout6	NMOS output CMOS output	OMS open, NMOS output with internal pull-high OMS grounded, CMOS-Direct output
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

**BS818C-2**

Pin Name	I/O	Description
Key1~Key8	Input	Touch key input pin, unused touch keys require grounding
OMS	Input	Output mode selection Open=2-wire serial mode Grounded=4-wire binary parallel mode
LSC	Input	Power-saving mode selection Open=General power-saving mode Grounded=More power-saving mode
Clock	Input	2-wire series interface Clock input – internal pull-high
Data	NMOS output	Serial interface Data NMOS output – internal pull-high
BIN3~BIN0	CMOS output	Binary output mode
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

**BS818C-3**

Pin Name	I/O	Description
Key1~Key8	Input	Touch key input pin, unused touch keys require grounding
IRQ	output	Interrupt request or wake-up function, NMOS output with internal pull-high
SCL	Input / Output	I <sup>2</sup> C clock input/output
SDA	Input / Output	I <sup>2</sup> C data input/output
VSS	—	Negative power supply, ground
VDD	—	Positive power supply
NC	—	Not Connected

**BS8112C-3 (16-pin NSOP)**

Pin Name	I/O	Description
Key1~Key11	Input	Touch key input pin, unused touch keys require grounding
Key12/IRQ	Input	Touch key input pin, unused touch keys require grounding
	Output	Interrupt request or wake-up function, NMOS output with internal pull-high
SCL	Input / Output	I <sup>2</sup> C clock input / output
SDA	Input / Output	I <sup>2</sup> C data input / output
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

**BS8112C-3 (20-pin SSOP)**

Pin Name	I/O	Description
Key1~Key12	Input	Touch key input pin, unused touch keys require grounding
IRQ	Output	Interrupt request or wake-up function, NMOS output with internal pull-high
SCL	Input / Output	I <sup>2</sup> C clock input/output
SDA	Input / Output	I <sup>2</sup> C data input/output
VSS	—	Negative power supply, ground
VDD	—	Positive power supply
NC	—	Not Connected

**BS8116C-3 (20-pin SSOP)**

Pin Name	I/O	Description
Key1~Key15	Input	Touch key input pin, unused touch keys require grounding
Key16/IRQ	Input	Touch key input pin, unused touch keys require grounding
	Output	Interrupt request or wake-up function, NMOS output with internal pull-high
SCL	Input / Output	I <sup>2</sup> C clock input / output
SDA	Input / Output	I <sup>2</sup> C data input / output
VSS	—	Negative power supply, ground
VDD	—	Positive power supply

**BS8116C-3 (24-pin SSOP)**

Pin Name	I/O	Description
Key1~Key16	Input	Touch key input pin, unused touch keys require grounding
IRQ	Output	Interrupt request or wake-up function, NMOS output with internal pull-high
SCL	Input / Output	I <sup>2</sup> C clock input/output
SDA	Input / Output	I <sup>2</sup> C data input/output
VSS	—	Negative power supply, ground
VDD	—	Positive power supply
NC	—	Not Connected

## Absolute Maximum Ratings

Supply Voltage .....	$V_{SS} -0.3V$ to $V_{SS} +6.5V$	Storage Temperature .....	$-50^{\circ}C$ to $125^{\circ}C$
Input Voltage .....	$V_{SS} -0.3V$ to $V_{DD} +0.3V$	Operating Temperature .....	$-40^{\circ}C$ to $85^{\circ}C$
$I_{OL}$ Total .....	80mA	Total Power Dissipation .....	500mW
$I_{OH}$ Total .....	-80mA		

Note: These are stress ratings only. Stresses exceeding the range specified under “Absolute Maximum Ratings” may cause substantial damage to the device. Functional operation of this device at other conditions beyond those listed in the specification is not implied and prolonged exposure to extreme conditions may affect device reliability.

## Functional Description

### Introduction

This range of BS81x touch key devices offer an easy and reliable means of implementing touch switch functions in a wide range of applications which require 1~16 touch keys. Very few external components are required for full touch key implementations. In addition to simple parallel output, a two-wire serial interface offer a convenient communication with an external MCU.

Sensitivity adjustment is also an easy matter. By the simple connection of a small capacitor to the touch key input pin, the changes in the capacitor value will be reflected in different sensitivity values. By having a fully integrated adaptive voltage drop function, touch switch applications can save on the usually required LDO.

### Option Table

#### OMS/LSC Option Table

The BS816C-1 and BS818C-2 provide two options to enhance application flexibility.

##### • OMS Option

	OMS – Output Mode Selection	Description
BS816C-1	Open	NMOS output with internal pull-high, low active
	Vss	CMOS output, high active
BS818C-2	Open	2-wire serial mode
	Vss	4-wire Binary parallel mode

##### • LSC Option

	LSC – Lower Standby Current	Description
BS816C-1	Open	General power-saving
BS818C-2	Vss	More power-saving (wake-up time of 0.5~1s)

#### I<sup>2</sup>C Option Table

BS818C-3, BS8112C-3 and BS8116C-3 provide options can be setup by I<sup>2</sup>C communication interface.

##### • IRQ\_OMS / STANDBY MODE Option

Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	R/W
0B0H	—					STANDBY MODE	IRQ_OMS	R/W	

Name	Default	Function
IRQ_OMS	0	0: Level hold, low active 1: One-shot, low active
STANDBY MODE	0	0: Power-saving function 1: Not enter power-saving function

##### • TOUCH\_FREQ/SENSITIVE Option

Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	R/W
0B3H	1	1	1	1	0	TOUCH_FREQ	SENSITIVE	R/W	

Name	Default	Function
TOUCH_FREQ	00	00: Touch frequency set 1 01: Touch frequency set 2 10: Touch frequency set 3 11: Can't be used
SENSITIVE	1	0: low sensitive 1: high sensitive

• **LSC Option**

Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	R/W
0B4H	1	LSC	0	1	1	0	0	0	R/W

Name	Default	Function
LSC	1	0: General power-saving 1: More power-saving (wake-up time of 0.5~1s)

• **Touch Key Wake-up Option**

Part No.	Address	Name	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	R/W
BS818C-3	0B5H~0BCH	Kn_TH	KnWU	0	Key n Trigger threshold value						R/W
BS8112C-3	0B5H~0C0H										
BS8116C-3	0B5H~0C4H										

Name	Default	Function
KnWU	0	0: Enable wake-up function 1: Disable wake-up function

• **Standby Time Control Option**

Address	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	R/W
E0H	0	Standby time value							R/W

Name	Default	Function
Standby Time Control	127	0~7: Can't be used 8: 512ms 9: 576ms 10: 640ms ⋮ 127: 8128ms

- Note: 1. When the working time reaches the default value will enter the standby mode automatically.  
2. Normal to Standby Mode Conversion Time (Typ.) = 64ms × standby time value.

## Operating Mode

There are two operating modes for this device series, the normal mode and the standby mode. During the 8 seconds after power-on, if no touch key actions are detected, the devices will automatically enter the standby mode to reduce their power consumption. If a key or keys are pressed, the device will be woken up and will then enter the normal mode and output the key state value until all keys are released. After 8 seconds, the system will then revert to the standby mode again. Note that the BS818C-3, BS8112C-3 and BS8116C-3 devices can set up the wake-up keys individually.

## Touch Key Outputs

For the BS811C-1, BS812C-1, BS813C-1 and BS814C-1 devices, all output pins are NMOS structures with connected internal pull-high resistors without requiring external resistors. The non touch detect output logic level is high. When a touch action is detected, the corresponding output will change to a low state.

For the BS816C-1 device, except the NMOS output type, users can also select a CMOS output type. The non touch detect output logic level is low. When a touch action is detected, the corresponding output will change to a high state.

## Serial Interface

The BS814C-2 and BS818C-2 are equipped with a serial interface allowing for easy interfacing to an external master MCU. When the device detects that a touch key has been pressed, it will output a low on the Data pin which can be used to wake up the master MCU. After receiving this low level, the master can then send a clock signal to the Clock pin and read back the key status from the Data pin.

When a low clock signal is received the key status data is prepared by the touch key device. When the clock signal changes to a high level, the master reads the touch key status data from the Data line. The timings associated with the communication protocol can be fully described within 8 clock periods. Without

waiting for a start bit, the touch key status condition can also be directly read using a polling method. If there are any errors in reading the data, it is necessary to wait for about 6ms and then read the data again.

**4-key Data Format**

After a clock signal is received on the Clock pin, an 8-bit data byte will be generated by the touch key device and shifted out on the Data pin. Data bits, bit6~bit4, will also generate a checksum whose content informs how many touch keys have been touched. For example, if the checksum is equal to “010”, it means that two keys have been touched. As to which keys are actually touched, this information can be retrieved from the condition of data bits, bit3~bit0. The state of the data bits, bit3~bit0, is used to indicate which touch keys, key4~key1, are touched

or not respectively. A low bit means the corresponding key is touched. Otherwise, the key is not touched if the corresponding data condition is high.

**Start bit:** When a key changes state, the Data pin outputs a low, which can wake up the master, which can then read the key status.

**Bit0:** Key1 state - “0”= touch, “1”= no touch

**Bit1:** Key2 state - “0”= touch, “1”= no touch

**Bit2:** Key3 state - “0”= touch, “1”= no touch

**Bit3:** Key4 state - “0”= touch, “1”= no touch

**Bit6~4:** Checksum – the total number of “0”s is used to indicate how many keys have been touched.

**Bit7:** Stop bit, always a “1”, high level.

**Data Transfer Timing – BS814C-2**

Bit	7	6~4	3~0	Descriptions
Function	Stop bit	Check Sum	Key4 ~ Key1 state	0: touched / 1: not touched
Data Stream	1	100	0000	Check Sum = 100, Four keys are touched
		011	0001, 0010, 0100 or 1000	Check Sum = 011, Three keys are touched
		010	0011, 0101, 0110, 1001, 1010 or 1100	Check Sum = 010, Two keys are touched
		001	0111, 1011, 1101 or 1110	Check Sum = 001, One key is touched
		000	1111	Check Sum = 000, No key is touched

**4-key Serial Data Stream Format**

**Data Transfer Timing – BS818C-2**

### 8-key Data Format

After a clock signal is received on the Clock pin, a 16-bit data byte will be generated by the touch key device and shifted out on the Data pin. Data bits, bit11~bit8, will also generate a checksum whose content informs how many touch keys have been touched. For example, if the check sum is equal to “0010”, it means that two keys have been touched. As to which keys are actually touched, this information can be retrieved from the condition of data bits, bit7~bit0. The state of the data bits, bit7~bit0, is used to indicate which touch keys, key8~key1, are touched or not respectively. A low bit means the corresponding key is touched. Otherwise, the key is not touched if the corresponding data condition is high.

**Start bit:** When a key state is changed, Data pin outputs a low, which can wake up the master, which can then read the key status.

**Bit0:** Key1 state – “0” = touch, “1” = no touch

**Bit1:** Key2 state – “0” = touch, “1” = no touch

**Bit2:** Key3 state – “0” = touch, “1” = no touch

**Bit3:** Key4 state – “0” = touch, “1” = no touch

**Bit4:** Key5 state – “0” = touch, “1” = no touch

**Bit5:** Key6 state – “0” = touch, “1” = no touch

**Bit6:** Key7 state – “0” = touch, “1” = no touch

**Bit7:** Key8 state – “0” = touch, “1” = no touch

**Bit11~8:** Checksum – the total number of “0”s is used to indicate how many keys have been touched.

**Bit15~12:** Stop bits, always “1010B”.

### Parallel Interface

The BS818C-2 also provides a parallel interface function which shows directly the key state condition. When the parallel output type is selected, the touch key data reflects only one key state, not more keys, at the same time. When no touch key is pressed, BIN3~BIN0 are high. When any key is pressed, BIN3 must output a low to wake up the master while BIN2~BIN0 reflect which keys are pressed as shown in the following table.

Pressed Key	BIN3	BIN2	BIN1	BIN0
No key	1 (high)	1	1	1
Key1	0 (low)	1	1	1
Key2	0	1	1	0
Key3	0	1	0	1
Key4	0	1	0	0
Key5	0	0	1	1
Key6	0	0	1	0
Key7	0	0	0	1
Key8	0	0	0	0

### I<sup>2</sup>C Interface

#### START and STOP Conditions

Bit	15~12	11~8	7~0	Descriptions
Function	Stop bit	Check Sum	Key8~Key1 state	0: touch / 1: not touched
Data Stream	1010	1000	00000000	Check Sum = 1000, 8 keys are touched.
		0111	00000001, 00000010, 00000100, 00001000, 00010000, 00100000, 01000000 or 10000000	Check Sum = 0111, 7 keys are touched.
		0110	00000011, 00000110, 00011000, 00110000, 11000000 or 10000001.....	Check Sum = 0110, 6 keys are touched.
		0101	00000111, 00001110, 11100000, 10000011, 10000110, 10001100 or 10011000...	Check Sum = 0101, 5 keys are touched.
		0100	00001111, 00011110, 00111100, 01111000, 11110000 or 10000111.....	Check Sum = 0100, 4 keys are touched.
		0011	00011111, 00111110, 01111100, 11111000 100011111 or 110001111.....	Check Sum = 0011, 3 keys are touched.
		0010	00111111, 01111110, 11111100, 01111110, 01111101 or 01111011.....	Check Sum = 0010, 2 keys are touched.
		0001	11111110, 11111101, 11111011, 11110111 11101111, 11011111, 10111111 or 01111111	Check Sum = 0001, 1 key is touched.
		0000	11111111	11111111

Serial Data Stream Format for 8-key

**Slave Address**

After the START signal, a 7-bit slave address will be transmitted. “The slave address is 0x50. (slave address + R/W = 0xA1 or 0xA0)

**Read or Write Control**

**Acknowledge**

**Slave Busy**

After a date byte (8bit+ACK) is transmitted, the slave device is busy with processing the received data (slave busy) and cannot receive the next data byte. At this time the SCL line is pulled down and the master can continue to transmit the data until the SCL line is pulled high again.

**• Read**

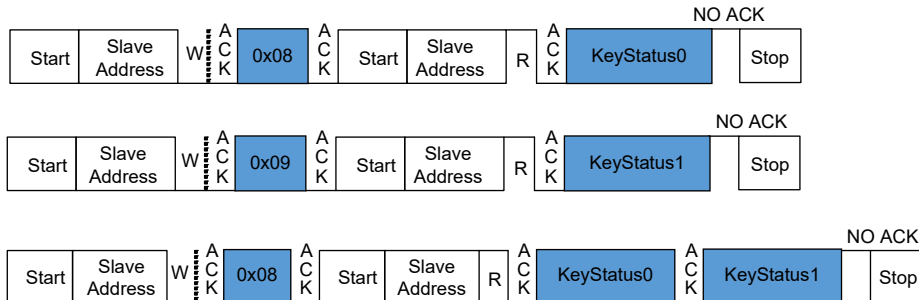

**• Write**

**Read Touch-key Status Data Register**

Read the touch key status data structure of the BS818C-3, BS8112C-3 or BS8116C-3.

BS818C-3, BS8112C-3 and BS8116C-3 Touch-key Status Data Registers

Address	Name	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	R/W
08H	KeyStatus0	Key8	Key7	Key6	Key5	Key4	Key3	Key2	Key1	R
09H	KeyStatus1	Key16 (Note)	Key15 (Note)	Key14 (Note)	Key13 (Note)	Key12	Key11	Key10	Key9	R

Note: Key16~Key13 are only for the BS8116C-3 device.

0=no touch, 1=touch

**BS818C-3 Write Setting Register**

When the master writes the setting byte to the BS818C-3, it writes 14 data bytes consecutively with the start byte of 0xB0 and the last byte of the checksum.

CheckSum (8-bit): DATA1 + DATA2 + ... + DATA13

When the setting is changed, the Touch Key module will be reset. For about 0.8s later the Touch Key module can normally operate after reset.

**BS818C-3 Read Setting Register**

The master read a setting byte of the BS818C-3.

The master read n setting bytes of the BS818C-3.

**• BS818C-3 Touch-key Setting Registers**

Address	Name	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0	R/W

• **BS8116C-3 Key16/IRQ Function Selection (Only 20-pin SSOP)**

Key16 Mode( bit6 of K16_TH)	Function
0	Key16
1	IRQ (Default)

## IRQ Function

Output mode: IRQ\_OMS = 0 (Level hold, low active)

The master reads the key data when the IRQ is low and will stop reading data until the key data is 0.

Output mode: IRQ\_OMS = 1 (One-shot, low active)

When the key status changes, send one-shot signal.

When the IRQ function is disabled, the Key12 of the BS8112C-3 or the Key16 of BS8116C-3 is used as the touch key. When the master read “KeyStatus=0x00”, which means all the keys is released, the master can reduce the reading speed and make the power consumption lower, the corresponding, the key response speed will also slow down.

## Maximum Key On Duration Time

To minimise the possibility of unintentional switch detections, such as undesired objects covering the sensing electrodes, the devices include a Maximum Key On duration time function. To implement this function the devices include an internal timer, which starts running after each switch detection. If the key on time of a touch key exceeds a value of about 64 seconds, then the device will re-calibrate the key state, obtain a new reference value, while the output status is reset to the initial state.

## Auto-calibration Function

The devices include a full auto-calibration function which will be initiated after the device is powered-on. In addition to the power-on calibration, if no switch detection has been made for about more than 1 second in the normal mode or 32 seconds in the standby mode, then a further calibration procedure will be carried out. By implementing this feature, changes in the touch key environmental conditions are automatically catered for dynamically.

## Adaptive Voltage Drop

This series of touch key devices include an adaptive voltage drop function which prevent touch key malfunction due to power supply voltage variations which may be caused by high current switching. With the adaptive voltage drop function, there is no need for an external LDO to deal with these voltage drop issues.

## Sensitivity Adjustment

The sensitivity of the switch is a very important consideration in most applications whose requirements will vary according to the user application. The user should therefore be aware of the methods which can adjust the sensitivity of their touch key application. Changing the PCB electrode size, the conductive layout area below the electrode and the thickness of the dielectric material panel can all be used to adjust the touch switch sensitivity. Additionally for the BS81x device series, except the BS818C-3, BS8112C-3 and BS8116C-3 devices, an external capacitor connected to the touch key input pin can also be used to adjust the sensitivity for different applications. While for the BS818C-3, BS8112C-3 and BS8116C-3 devices, changing related settings through the I<sup>2</sup>C can be used to adjust the sensitivity for different demands.

The touch threshold adjustment range is from 8~63.

## Application Circuits

### BS811C-1

Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

### BS812C-1

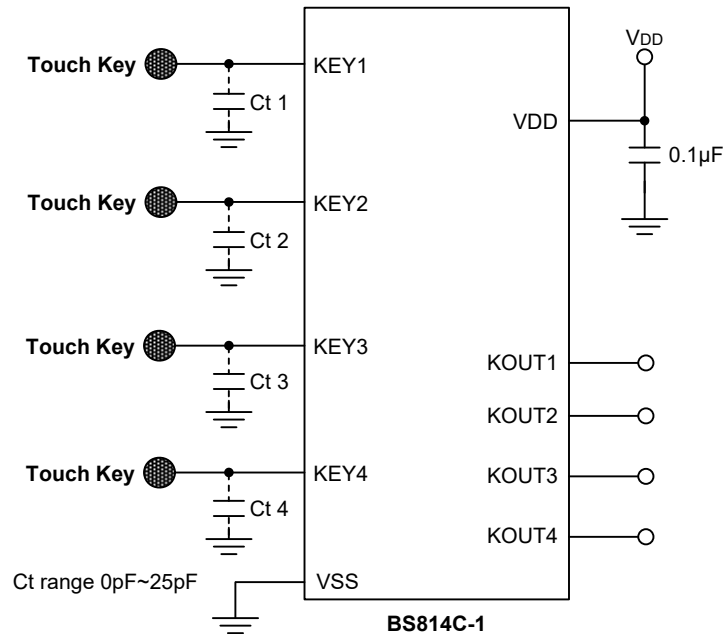

Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

**BS813C-1**

Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

**BS814C-1**

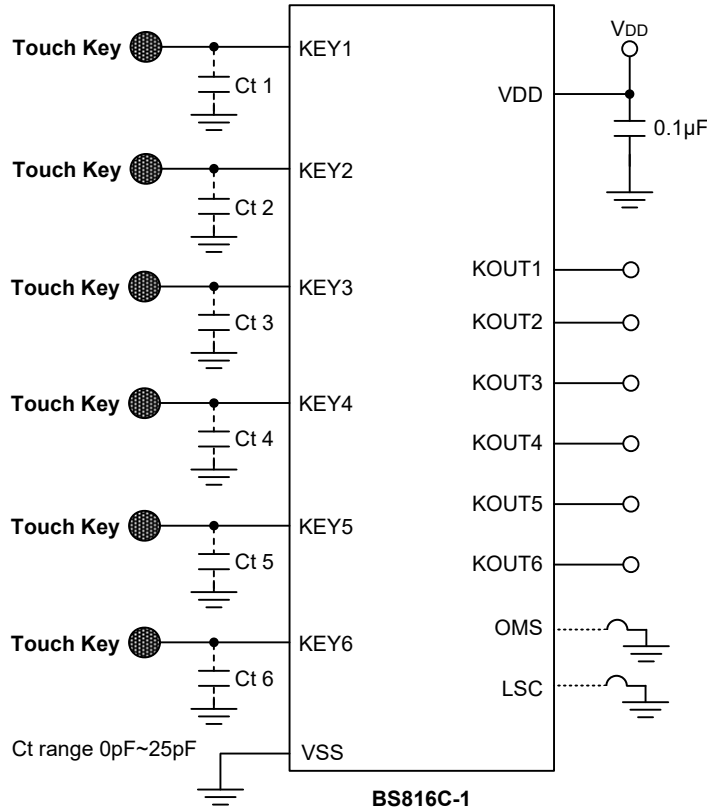

Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

**BS814C-2**

Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

**BS816C-1**

Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

**BS818C-2**

Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

**BS818C-2 – Parallel Interface Mode**

- Note: 1. Ct (C threshold) is used for adjustment of Trigger Threshold. Recommended value: 0~25 pF  
 2. Ct value can be changed to obtain different sensitivity values. Higher Ct values will result in lower sensitivity levels. (0pF = no Ct)

**BS818C-3**

**BS8112C-3 (16-pin NSOP)**

**BS8112C-3 (20-pin SSOP)**

**BS8116C-3 (20-pin SSOP)**

**BS8116C-3 (24-pin SSOP)**

## Package Information

Note that the package information provided here is for consultation purposes only. As this information may be updated at regular intervals users are reminded to consult the [Holtek website](#) for the latest version of the [Package/ Carton Information](#).

Additional supplementary information with regard to packaging is listed below. Click on the relevant section to be transferred to the relevant website page.
