

70dB PSRR, Low Noise, Fast Response 300mA LDO in DFN1x1 and SOT23-5

DESCRIPTION

ETA5053 is a fixed output, low-dropout (LDO) low-power linear voltage regulator features high power-supply rejection ratio (PSRR), ultralow-noise, fast start-up, and excellent line and load transient responses. Its PSRR can be as high as 70dB with quiescent current is about 35uA. Therefore, ETA5053 is an ideal power supply for noise-sensitive applications such as RF transmissions, cellphones, CMOS sensors and audios etc.

ETA5053 is available in DFN1x1 and SOT23-5.

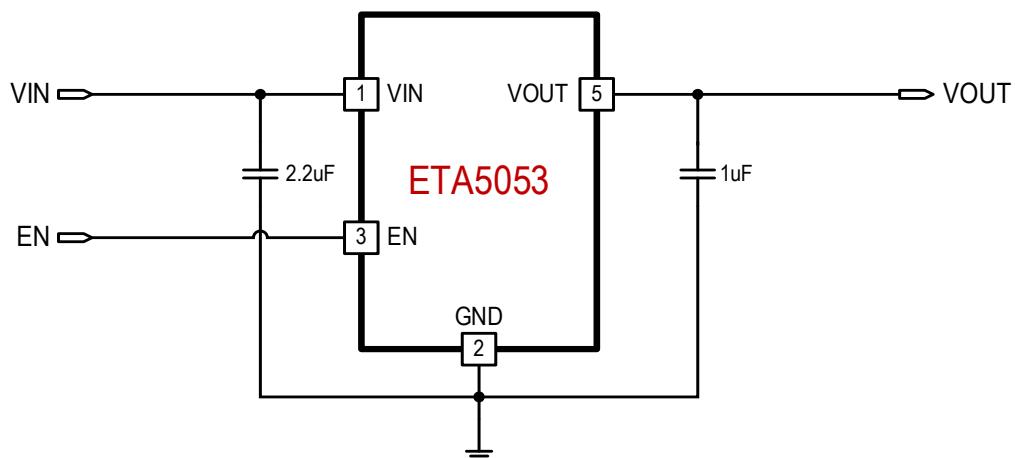

FEATURES

- ◆ High PSRR, 70dB
- ◆ 300mA Output Current
- ◆ Stable with a Wide Range of Ceramic Capacitor
- ◆ Excellent Load and Line Transient Response
- ◆ 0.24V Dropout Voltage for 200mA at Vout=3.3V
- ◆ 35uA Iq

APPLICATIONS

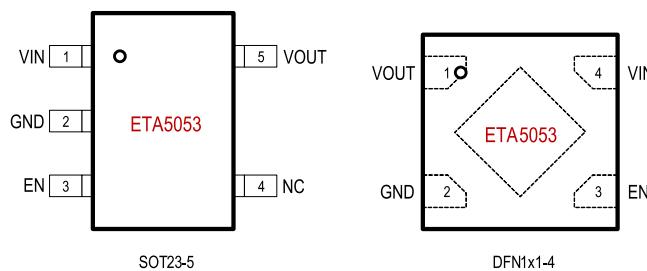

- ◆ Cellphone
- ◆ Security Camera
- ◆ Set-Top Box

FUNCTIONAL BLOCK DIAGRAM

FUNCTIONAL DESCRIPTION

The ETA5053 family of LDO regulators has been optimized for application in noise-sensitive equipment. The device features low dropout voltages, high PSRR, low quiescent current, and enable-input to reduce supply currents to less than $1\mu\text{A}$ when the regulator is turned off.

Enable Sequence

ETA5053 is enabled when all below conditions happen. Otherwise, ETA5053 is in standby mode.

- ◆ EN pin voltage above Logic High level
- ◆ Junction Temperature is not at Over-Temperature Protection level.

Once all above conditions happen, ETA5053 first enables BANDGAP and BIAS then enables LDO core.

ETA5053 is completed forced in shutdown mode when EN pin is at below LOGIC_LOW that supply current is less than 1 μ A. Otherwise, part only shutdown the VOUT while other circuit still in operation. Once ETA5053 is in shutdown conditions, Output is discharged by resistor (optional).

Output Current Limit and Foldback Current Limit

ETA5053 family features an internal current limit. In normal operation, the ETA5053 limits output current to approximately 500mA. When current limiting engages, the output voltage scales back linearly until the over current condition ends.

In case output is in hard short conditions, ETA5053 also features an internal foldback limit that reduces the output current limit to a lower level, 250mA, then reduce power dissipation ratings of the package.

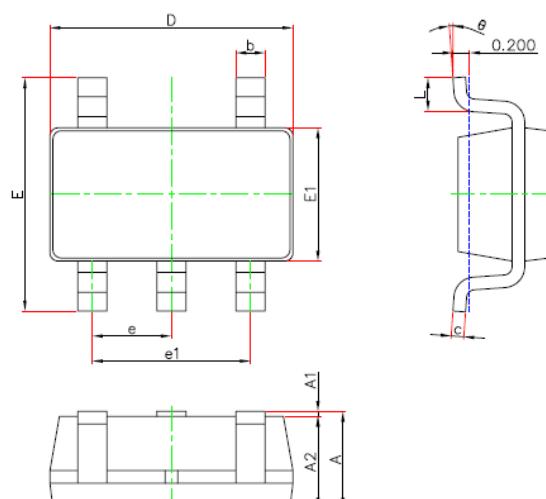

Over-Temperature Protection

Thermal protection disables the output when the junction temperature rises to approximately 150°C, allowing the device to cool down. When the junction temperature cools to approximately 120°C, the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits regulator dissipation, protecting the device from damage as a result of overheating.
