9.2 TYPICAL APPLICATION

1. Please ensure that at least a 100 µF electrolytic capacitor is connected at the input in order to ensure adequate voltage surge suppression and protection.
2. Output ripple can be further reduced by appropriately increasing the output capacitor values C2/C3 and/or by selecting capacitors with a low ESR (equivalent series resistance). Also make sure that the capacitance is not exceeding the specified max. capacitive load value of the product.

9.3 TRIM FUNCTION FOR OUTPUT VOLTAGE ADJUSTMENT (open if unused)

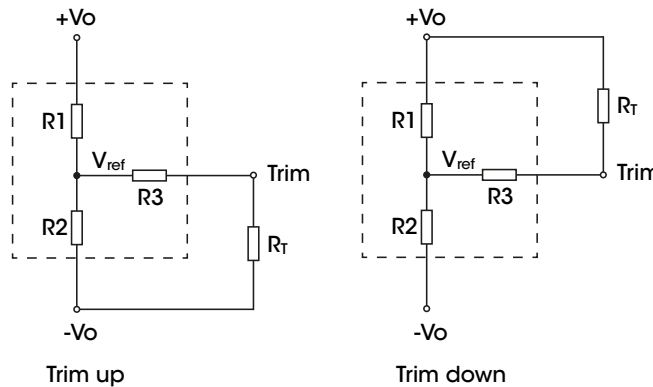

Figure 5. Trim resistor connection (dashed line shows internal resistor network)

Calculation formula of Trim resistance:

$$\text{Trim up: } R_T = \frac{a * R_2}{R_2 - a} - R_3$$

$$a = \frac{V_{ref} * R_1}{V_o - V_{ref}}$$

$$\text{Trim down: } R_T = \frac{b * R_1}{R_1 - b} - R_3$$

$$b = \frac{(V_o - V_{ref}) * R_2}{V_{ref}}$$

NOTES:

a, b : Self-defined parameter, round to the nearest hundredth
