- One load is 25% to 100% load, the other load is 100% load, the output voltage variable rate is within $\pm 5\%$.
- Ripple/Noise measured with a 10 μF electrolytic capacitor and 0.1 μF ceramic capacitor.
- Test by minimal Vin and constant resistive load.
- Test by normal Vin and 100%-25% load,25% load step change.
- Measured Input reflected ripple current with a simulated source inductance of 27 μH and a source capacitor Cin (47 μF , ESR<1.0 Ω).
- "Nature Convection" is usually about 30-65 LFM but is not equal to still air (0 LFM).
- Exceeding the absolute ratings of the unit could cause damage. It's not allowed for continuous operating ratings.
- Input filter components are required to help meet conducted emission class A, Which application refer to the EMI Filter(Conduct).
- An external filter capacitor is required if the module has to meet IEC61000-4-4 and IEC61000-4-5. The filter capacitor Motien suggest: Nippon - chemi - con KY series, 220 $\mu\text{F}/100\text{V}$.
