

Reference Specification

Safety Standard Certified Lead Type Disc Ceramic Capacitors for Consumer Electronics & Industrial Equipment /Type SA

Product specifications in this catalog are as of Oct. 2023, and are subject to change or obsolescence without notice.

Please consult the approval sheet before ordering. Please read rating and Cautions first.

<Reference>Please kindly use our website.

↑ CAUTION

1. OPERATING VOLTAGE

- 1. Do not apply a voltage to a safety standard certified product that exceeds the rated voltage as called out in the specifications. Applied voltage between the terminals of a safety standard certified product shall be less than or equal to the rated voltage (+10 %). When a safety standard certified product is used as a DC voltage product, the AC rated voltage value becomes the DC rated voltage value. (Example:AC250 V (r.m.s.) rated product can be used as DC250 V (+10 %) rated product.) If both AC rated voltage and DC rated voltage are specified, apply the voltage lower than the respective rated voltage.
 - 1-1. When a safety standard certified product is used in a circuit connected to a commercial power supply, ensure that the applied commercial power supply voltage including fluctuation should be less than 10 % above its rated voltage.
 - 1-2. When using a safety standard certified product as a DC rated product in circuits other than those connected to a commercial power supply.

When AC voltage is superimposed on DC voltage, the zero-to-peak voltage shall not exceed the rated DC voltage. When AC voltage or pulse voltage is applied, the peak-to-peak voltage shall not exceed the rated DC voltage.

Typical Voltage Applied to the DC Capacitor

(E: Maximum possible applied voltage.)

Abnormal voltages (surge voltage, static electricity, pulse voltage, etc.) shall not exceed the rated DC voltage.

2. OPERATING TEMPERATURE AND SELF-GENERATED HEAT

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself.

When the capacitor is used in a high-frequency current, pulse current or the like, it may have the self-generated heat due to dielectric-loss. Applied voltage should be the load such as self-generated heat is within 20 °C on the condition of atmosphere temperature 25 °C. When measuring, use a thermocouple of small thermal capacity-K of Φ 0.1 mm and be in the condition where capacitor is not affected by radiant heat of other components and wind of surroundings. Excessive heat may lead to deterioration of the capacitor's characteristics and reliability. (Never attempt to perform measurement with the cooling fan running. Otherwise, accurate measurement cannot be ensured.)

3. TEST CONDITION FOR WITHSTANDING VOLTAGE

1. TEST EQUIPMENT

Test equipment for AC withstanding voltage should be used with the performance of the wave similar to 50/60 Hz sine wave.

If the distorted sine wave or over load exceeding the specified voltage value is applied, the defective may be caused.

2. VOLTAGE APPLIED METHOD

When the withstanding voltage is applied, capacitor's lead or terminal should be firmly connected to the out-put of the withstanding voltage test equipment, and then the voltage should be raised from near zero to the test voltage.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, test voltage should be applied with the *zero cross. At the end of the test time, the test voltage should be reduced to near zero, and then capacitor's lead or terminal should be taken off the out-put of the withstanding voltage test equipment.

If the test voltage without the raise from near zero voltage would be applied directly to capacitor, the surge voltage may arise, and therefore, the defective may be caused.

*ZERO CROSS is the point where voltage sine wave pass 0 V.

- See the right figure -

4. FAIL-SAFE

When capacitor would be broken, failure may result in a short circuit. Be sure to provide an appropriate fail-safe function like a fuse on your product if failure would follow an electric shock, fire or fume.

5. VIBRATION AND IMPACT

Do not expose a capacitor or its leads to excessive shock or vibration during use.

6. SOLDERING

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.

When soldering capacitor with a soldering iron, it should be performed in following conditions.

6-1. Flow Soldering

Soldering temperature : 260 $^{\circ}$ C max. Soldering time : 7.5 s max. Preheating temperature : 120 $^{\circ}$ C max. Preheating time : 60 s max.

6-2. Soldering Iron

Temperature of iron-tip : 400 °C max. Soldering iron wattage : 50 W max. Soldering time : 3.5 s max.

Standard Condition for Flow Soldering

EGD08L

7. BONDING, RESIN MOLDING AND COATING

Before bonding, molding or coating this product, verify that these processes do not affect the quality of capacitor by testing the performance of the bonded, molded or coated product in the intended equipment.

In case of the amount of applications, dryness / hardening conditions of adhesives and molding resins containing organic solvents (ethyl acetate, methyl ethyl ketone, toluene, etc.) are unsuitable, the outer coating resin of a capacitor is damaged by the organic solvents and it may result, worst case, in a short circuit.

The variation in thickness of adhesive, molding resin or coating may cause a outer coating resin cracking and/or ceramic element cracking of a capacitor in a temperature cycling.

8. TREATMENT AFTER BONDING, RESIN MOLDING AND COATING

When the outer coating is hot (over 100 $^{\circ}$ C) after soldering, it becomes soft and fragile. So please be careful not to give it mechanical stress.

Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

9. OPERATING AND STORAGE ENVIRONMENT

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. And avoid exposure to moisture. Before cleaning, bonding, or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed -10 to 40 °C and 15 to 85 %.

Use capacitors within 6 months after delivered. Check the solderability after 6 months or more.

10. LIMITATION OF APPLICATIONS

The products listed in the specification(hereinafter the product(s) is called as the "Product(s)") are designed and manufactured for applications specified in the specification. (hereinafter called as the "Specific Application")

We shall not warrant anything in connection with the Products including fitness, performance, adequateness, safety, or quality, in the case of applications listed in from (1) to (11) written at the end of this precautions, which may generally require high performance, function, quality, management of production or safety.

Therefore, the Product shall be applied in compliance with the specific application.

WE DISCLAIM ANY LOSS AND DAMAGES ARISING FROM OR IN CONNECTION WITH THE PRODUCTS INCLUDING BUT NOT LIMITED TO THE CASE SUCH LOSS AND DAMAGES CAUSED BY THE UNEXPECTED ACCIDENT, IN EVENT THAT (i) THE PRODUCT IS APPLIED FOR THE PURPOSE WHICH IS NOT SPECIFIED AS THE SPECIFIC APPLICATION FOR THE PRODUCT, AND/OR (ii) THE PRODUCT IS APPLIED FOR ANY FOLLOWING APPLICATION PURPOSES FROM (1) TO (11) (EXCEPT THAT SUCH APPLICATION PURPOSE IS UNAMBIGUOUSLY SPECIFIED AS SPECIFIC APPLICATION FOR THE PRODUCT IN OUR CATALOG SPECIFICATION FORMS, DATASHEETS, OR OTHER DOCUMENTS OFFICIALLY ISSUED BY US*)

- 1. Aircraft equipment
- 2. Aerospace equipment
- 3. Undersea equipment
- 4. Power plant control equipment
- 5. Medical equipment
- 6. Transportation equipment
- 7. Traffic control equipment
- 8. Disaster prevention/security equipment
- 9. Industrial data-processing equipment
- 10. Combustion/explosion control equipment
- 11. Equipment with complexity and/or required reliability equivalent to the applications listed in the above.

For exploring information of the Products which will be compatible with the particular purpose other than those specified in the specification, please contact our sales offices, distribution agents, or trading companies with which you make a deal, or via our web contact form.

Contact form: https://www.murata.com/contactform

*We may design and manufacture particular Products for applications listed in (1) to (11). Provided that, in such case we shall unambiguously specify such Specific Application in the specification without any exception.

Therefore, any other documents and/or performances, whether exist or non-exist, shall not be deemed as the evidence to imply that we accept the applications listed in (1) to (11).

NOTICE

1. CLEANING (ULTRASONIC CLEANING)

To perform ultrasonic cleaning, observe the following conditions.

Rinse bath capacity: Output of 20 watts per liter or less.

Rinsing time: 5 min maximum.

Do not vibrate the PCB/PWB directly.

Excessive ultrasonic cleaning may lead to fatigue destruction of the terminals.

2. CAPACITANCE CHANGE OF CAPACITORS

· Class 1 capacitors

Capacitance might change a little depending on a surrounding temperature or an applied voltage. Please contact us if you use for the strict time constant circuit.

· Class 2 capacitors

Class 2 capacitors like temperature characteristic B, E and F have an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor leaves for a long time. Moreover, capacitance might change greatly depending on a surrounding temperature or an applied voltage. So, it is not likely to be able to use for the time constant circuit.

Please contact us if you need a detail information.

3. PERFORMANCE CHECK BY EQUIPMENT

Before using a capacitor, check that there is no problem in the equipment's performance and the specifications.

Generally speaking, Class 2 ceramic capacitors have voltage dependence characteristics and temperature dependence characteristics in capacitance. So, the capacitance value may change depending on the operating condition in a equipment. Therefore, be sure to confirm the apparatus performance of receiving influence in a capacitance value change of a capacitor, such as leakage current and noise suppression characteristic.

Moreover, check the surge-proof ability of a capacitor in the equipment, if needed, because the surge voltage may exceed specific value by the inductance of the circuit.

∧ NOTE

- 1. Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
- 2. You are requested not to use our product deviating from this specification.

1.Application

This product specification is applied to Safety Standard Certified Lead Type Disc Ceramic Capacitors Type SA.

The safety standard certification is obtained as Class X1, Y2.

1. Specific applications:

- •Consumer Equipment: Products that can be used in consumer equipment such as home appliances, audio/visual equipment, communication equipment, information equipment, office equipment, and household robotics, and whose functions are not directly related to the protection of human life and property.
- ·Industrial Equipment: Products that can be used in industrial equipment such as base stations, manufacturing equipment, industrial robotics equipment, and measurement equipment, and whose functions do not directly relate to the protection of human life and property.
- ·Medial Equipment [GHTF A/B/C] except for Implant Equipment: Products suitable for use in medical devices designated under the GHTF international classifications as Class A or Class B (the functions of which are not directly involved in protection of human life or property) or in medical devices other than implants designated under the GHTF international classifications as Class C (the malfunctioning of which is considered to pose a comparatively high risk to the human body).
- ·Automotive infotainment/comfort equipment: Products that can be used for automotive equipment such as car navigation systems and car audio systems that do not directly relate to human life and whose structure, equipment, and performance are not specifically required by law to meet technical standards for safety assurance or environmental protection.
- 2.Unsuitable Application: Applications listed in "Limitation of applications" in this product specification.

Approval standard and certified number

| | Standard number | *Certified number | Rated voltage |
|---------------|--------------------------|-------------------|--|
| UL/cUL | UL60384-14/CSA E60384-14 | E37921 | |
| ENEC (VDE) | EN60384-14 | 40042990 | X1: AC440 V(r.m.s.) Y2: AC400 V(r.m.s.) |
| CQC | IEC60384-14 | CQC15001137840 | |

^{*}Above Certified number may be changed on account of the revision of standards and the renewal of certification.

2.Rating

2-1. Operating temperature range

-40 ~ 125°C

2-2.Rated Voltage

X1: AC440 V(r.m.s.) Y2: AC400 V(r.m.s.) DC1,500 V

2-3.Part number configuration

ex.)

| DE2 | E3 | SA | 103 | M | A3 | B | Y02F |
|--------|-----------------|-----------|-------------|-------------|-------|---------|---------------|
| Series | Temperature | Certified | Capacitance | Capacitance | Lead | Package | Individual |

6. Packing specification

•Bulk type (Package : B)

The size of packing case and packing way

The number of packing = *1 Packing quantity × *2 n

*1 : Please refer to [Part number list].

*2 : Standard n = 20 (bag)

Note)

The outer package and the number of outer packing be changed by the order getting amount.

- •Ammo pack taping type (Package : A)
 - •The tape with capacitors is packed zigzag into a case.
 - •When body of the capacitor is piled on other body under it.
 - •There should be 3 pitches and over without capacitors in leader and trailer.

The size of packing case and packing way

7. Taping specification

7-1. Dimension of capacitors on tape

Vertical crimp taping type < Lead Style : N3 >

Pitch of component 15.0 mm / Lead spacing 7.5 mm

| Item | | Dimensions | Remarks |
|---|-----|--------------------------------------|--------------------------------------|
| Pitch of component | | 15.0+/-2.0 | |
| Pitch of sprocket hole | | 15.0+/-0.3 | |
| Lead spacing | F | 7.5+/-1.0 | |
| Length from hole center to component center | | 7.5+/-1.5 | Deviation of progress direction |
| Length from hole center to lead | | 3.75+/-1.0 | Deviation of progress direction |
| Body diameter | | Please refer to | [Part number list]. |
| Deviation along tape, left or right | | 0+/-2.0 | They include deviation by lead bend. |
| Carrier tape width | | 18.0+/-0.5 | |
| Position of sprocket hole | | 9.0+/-0.5 | Deviation of tape width direction |
| Lead distance between reference and bottom planes | | 18.0+2.0/-0 | |
| Protrusion length | | +0.5~-1.0 | |
| Diameter of sprocket hole | | 4.0+/-0.1 | |
| Lead diameter | | 0.60+/-0.05 | |
| Total tape thickness | | 0.6+/-0.3 | They include hold down tape |
| Total thickness of tape and lead wire | t2 | 1.5 max. | thickness. |
| Deviation across tape, front | Δh1 | 2.0 max. | |
| Deviation across tape, rear | Δh2 | 2.0 IIIax. | |
| Portion to cut in case of defect | | 11.0+0/-1.0 | |
| Hold down tape width | | 11.5 min. | |
| Hold down tape position | | 1.5+/-1.5 | |
| Coating extension on lead | | Up to the end of crimp | |
| Body thickness | | Please refer to [Part number list]. | |

Vertical crimp taping type < Lead Style : N7 > Pitch of component 30.0 mm / Lead spacing 7.5 mm

| Item | | Dimensions | Remarks |
|---|-----|--------------------------------------|--|
| Pitch of component | | 30.0+/-2.0 | |

| Hold down tape position | W2 | 1.5+/-1.5 | |
| Coating extension on lead | е | Up to the end o | f crimp |
| Body thickness | | Please refer to [Part number list]. | |

7-2. Splicing way of tape

1) Adhesive force of tape is over 3 N at test condition as below.

- 2) Splicing of tape
 - a) When base tape is spliced
 - •Base tape should be spliced by cellophane tape. (Total tape thickness should be less than 1.05 mm.)

- b) When hold down tape is spliced
 - •Hold down tape should be spliced with overlapping. (Total tape thickness should be less than 1.05 mm.)

- c) When both tape are spliced
 - •Base tape and hold down tape should be spliced with splicing tape.
- 3) Missing components
 - •There should be no consecutive missing of more than three components.
 - \bullet The number of missing components should be not more than 0.5 % of total components that should be present in a Ammo pack.
