

## RL78/G23

RENESAS MCU

R01DS0395EJ0121

Rev.1.21

Nov 15, 2022

True low-power platform, 41- $\mu$ A/MHz operating current, 210-nA holding current for 4 KB of RAM, up to 768-KB code flash memory and 48-KB RAM, Capacitive sensing unit, from 30 to 128 pins, 1.6-5.5 V

## 1. Outline

### 1.1 Features

Ultra-low power consumption technology

- VDD = single power supply voltage of 1.6 to 5.5 V
- HALT mode
- STOP mode
- High-speed wakeup from the STOP mode is possible.
- SNOOZE mode

RL78 CPU core

- CISC architecture with 3-stage pipeline
- Minimum instruction execution time: Can be changed from high speed (0.03125  $\mu$ s @ 32 MHz operation with the high-speed on-chip oscillator clock) to ultra-low speed (30.5  $\mu$ s @ 32.768 kHz operation with the subsystem clock)
- Multiply/divide/multiply & accumulate instructions are supported.
- Address space: 1 MB
- General-purpose registers: (8-bit register  $\times$  8)  $\times$  4 banks
- On-chip RAM: 12 to 48 KB

Code flash memory

- Code flash memory: 96 to 768 KB
- Block size: 2 KB
- Prohibition of block erase and rewriting (security function)
- On-chip debugging
- Self-programming (with boot swapping and flash shield window)

Data flash memory

- Data flash memory: 8 KB
- Background operation (BGO): Instructions can be executed from the program memory while rewriting the data flash memory.
- Number of rewrites: 1,000,000 times (typ.)

High-speed on-chip oscillator

- Select from 32 MHz, 24 MHz, 16 MHz, 12 MHz, 8 MHz, 6 MHz, 4 MHz, 3 MHz, 2 MHz, or 1 MHz
- High accuracy:  
 $\pm 1.0\%$  (VDD = 1.8 to 5.5 V, TA = -20 to +85°C)

Middle-speed on-chip oscillator

- Select from 4 MHz, 2 MHz, or 1 MHz (with adjustability)

Low-speed on-chip oscillator

- 32.768 kHz (typ.) (with adjustability)

Operating ambient temperature

- TA = -40 to +85°C (2D: Consumer applications)
- TA = -40 to +105°C (3C: Industrial applications)

Power management and reset function

- On-chip power-on-reset (POR) circuit
- On-chip voltage detectors (LVD0 and LVD1)

Data transfer controller (DTC)

- Transfer modes: Normal transfer mode, repeat transfer mode, block transfer mode
- Activation sources: Activated by interrupt sources.
- Chain transfer function

SNOOZE mode sequencer (SMS)

- Calculations and comparison of values by the commands for use in processing by the sequencer can realize intermittent operations where the RL78/G23 does not have to return to normal operation.
- Sequentially handling a total of 32 processes with the use of desired commands from among 21 different ones
- The SNOOZE mode sequencer offers operation with low power consumption without using the CPU, flash memory, and RAM.

## Logic and event link controller (ELCL)

- Event signals can be set up between specified peripheral functions.
- The signals can be generated by the input of multiple event signals to the logic circuit.
- Flip-flop circuits are incorporated to handle setting and resetting functions.

## Serial interface

- Simplified SPI (CSI)<sup>Note 1</sup>: 3 to 8 channels
- UART/UART (LIN-bus supported)/UARTA: 3 to 6 channels
- I<sup>2</sup>C/Simplified I<sup>2</sup>C: 4 to 10 channels

## Remote control signal receiver

- 1 channel
- Matching of 4 waveform patterns (header, data 0, data 1, and special data)

## Timers

- 16-bit timer: 8 to 16 channels
- 32-bit interval timer:
  - 1 channel in 32-bit counter mode
  - 2 channels in 16-bit counter mode
  - 4 channels in 8-bit counter mode
- Realtime clock:
  - 1 channel (counting of one second to 99 years, alarm interrupt, and clock correction)
- Watchdog timer:
  - 1 channel (operates with the dedicated low-speed on-chip oscillator clock)

## A/D converter

- 8-/10-/12-bit resolution A/D converter
- Analog input: 8 to 26 channels
- Internal reference voltage (1.48 V) and temperature sensor

## D/A converter

- 8-bit resolution D/A converter
- Analog output: 2 channels
- Output voltage: 0 V to V<sub>DD</sub>
- Realtime output function

## Comparator

- 2 channels
- Operating modes: Comparator high-speed mode and comparator low-speed mode
- The external reference voltage and the internal reference voltage or D/A converter output are selectable as the reference voltage.

## Capacitive sensing unit

- CTSU2L operating voltage condition: V<sub>DD</sub> = 1.8 to 5.5 V
- Self-capacitance method: A single pin configures a single key, supporting up to 32 keys
- Mutual capacitance method: Matrix configuration with 8 × 8 pins, supporting up to 64 keys

## Input/output port pins

- Number of port pins:
  - 26 to 120 (N-ch open drain I/O [withstand voltage of 6 V]: 2 to 4, N-ch open drain I/O [V<sub>DD</sub> withstand voltage <sup>Note 2</sup>/EV<sub>DD</sub> withstand voltage <sup>Note 3</sup>]: 10 to 33, output current control pins: 6 to 8)
- Can be set to N-ch open drain or TTL input buffer, and use of an on-chip pull-up resistor can be specified.
- Connectable to a device with different voltage (1.8, 2.5, or 3 V)

## Others

- BCD (binary-coded decimal) correction circuit
- Key interrupt input
- Clock output/buzzer output controller

**Note 1.** Although the CSI function is generally called SPI, it is also called CSI in this product, so it is referred to as such in this manual.

**Note 2.** This applies to the 30- to 52-pin products.

**Note 3.** This applies to the 64- to 128-pin products.

**Remark** The functions mounted depend on the product. See **1.6 Outline of Functions**.

## 1.3 Pin Configuration (Top View)

### 1.3.1 30-pin products

- 30-pin plastic LSSOP (7.62 mm (300), 0.65-mm pitch)

**Note** Not present in products with 128 or fewer Kbytes of code flash memory.

**Caution** Connect the REGC pin to Vss via a capacitor (0.47 to 1  $\mu$ F).

**Remark 1.** For pin identification, see 1.4 Pin Identification.

**Remark 2.** Functions in parentheses in the above figure can be assigned via settings in the peripheral I/O redirection register (PIOR). Refer to Figure 4 - 10 Format of Peripheral I/O Redirection Register (PIOR) in the RL78/G23 User's Manual.

### 1.3.2 32-pin products

- 32-pin plastic HWQFN (5 × 5 mm, 0.50-mm pitch)
- 32-pin plastic LQFP (7 × 7 mm, 0.80-mm pitch)

**Note 1.** Not present in products with 128 or fewer Kbytes of code flash memory.

**Note 2.** The 32-pin plastic LQFP (7 × 7 mm, 0.80-mm pitch) products do not have an exposed die pad.

**Caution** Connect the REGC pin to Vss via a capacitor (0.47 to 1 µF).

**Remark 1.** For pin identification, see **1.4 Pin Identification**.

**Remark 2.** Functions in parentheses in the above figure can be assigned via settings in the peripheral I/O redirection register (PIOR). Refer to **Figure 4 - 10 Format of Peripheral I/O Redirection Register (PIOR)** in the RL78/G23 User's Manual.

**Remark 3.** It is recommended to connect an exposed die pad to Vss.

### 1.3.8 64-pin products

- 64-pin plastic LQFP (12 × 12 mm, 0.65-mm pitch)
- 64-pin plastic LFQFP (10 × 10 mm, 0.50-mm pitch)

**Note** Not present in products with 128 or fewer Kbytes of code flash memory.

**Caution 1. Connect the EVSS0 pin to the same ground as the Vss pin.**

**Caution 2. Make sure that the voltage on the Vdd pin is no less than that on the EVDD0 pin.**

**Caution 3. Connect the REGC pin to Vss via a capacitor (0.47 to 1  $\mu$ F).**

**Remark 1.** For pin identification, see **1.4 Pin Identification**.

**Remark 2.** When using the microcontroller for an application where the noise generated inside the microcontroller must be reduced, it is recommended to supply separate powers to the Vdd and EVDD0 pins and connect the Vss and EVSS0 pins to separate ground lines.

**Remark 3.** Functions in parentheses in the above figure can be assigned via settings in the peripheral I/O redirection register (PIOR). Refer to **Figure 4 - 10 Format of Peripheral I/O Redirection Register (PIOR)** in the RL78/G23 User's Manual.

(Cautions and Remarks are listed on the next page.)

**Caution 1.** Connect the EV<sub>SS0</sub> pin to the same ground as the V<sub>SS</sub> pin.

**Caution 2.** Make sure that the voltage on the V<sub>DD</sub> pin is no less than that on the EV<sub>DD0</sub> pin.

**Caution 3.** Connect the REGC pin to V<sub>SS</sub> via a capacitor (0.47 to 1  $\mu$ F).

**Remark 1.** For pin identification, see **1.4 Pin Identification**.

**Remark 2.** When using the microcontroller for an application where the noise generated inside the microcontroller must be reduced, it is recommended to supply separate powers to the V<sub>DD</sub> and EV<sub>DD0</sub> pins and connect the V<sub>SS</sub> and EV<sub>SS0</sub> pins to separate ground lines.

**Remark 3.** Functions in parentheses in the above figure can be assigned via settings in the peripheral I/O redirection register (PIOR). Refer to **Figure 4 - 10 Format of Peripheral I/O Redirection Register (PIOR)** in the RL78/G23 User's Manual.

### 1.3.9 80-pin products

- 80-pin plastic LQFP (14 × 14 mm, 0.65-mm pitch)
- 80-pin plastic LFQFP (12 × 12 mm, 0.50-mm pitch)

**Caution 1.** Connect the EV<sub>SS0</sub> pin to the same ground as the V<sub>SS</sub> pin.

**Caution 2.** Make sure that the voltage on the V<sub>DD</sub> pin is no less than that on the EV<sub>DD0</sub> pin.

**Caution 3.** Connect the REGC pin to V<sub>SS</sub> via a capacitor (0.47 to 1  $\mu$ F).

**Remark 1.** For pin identification, see **1.4 Pin Identification**.

**Remark 2.** When using the microcontroller for an application where the noise generated inside the microcontroller must be reduced, it is recommended to supply separate powers to the V<sub>DD</sub> and EV<sub>DD0</sub> pins and connect the V<sub>SS</sub> and EV<sub>SS0</sub> pins to separate ground lines.

**Remark 3.** Functions in parentheses in the above figure can be assigned via settings in the peripheral I/O redirection register (PIOR). Refer to **Figure 4 - 10 Format of Peripheral I/O Redirection Register (PIOR)** in the RL78/G23 User's Manual.

### 1.3.10 100-pin products

- 100-pin plastic LFQFP (14 × 14 mm, 0.50-mm pitch)

**Caution 1.** Connect the EVSS0 and EVSS1 pins to the same ground as the Vss pin.

**Caution 2.** Make sure that the voltage on the VDD pin is no less than that on the EVDD0 and EVDD1 pins. Also make sure that the voltage on the EVDD0 is the same as that on the EVDD1 pin.

**Caution 3.** Connect the REGC pin to Vss via a capacitor (0.47 to 1  $\mu$ F).

**Remark 1.** For pin identification, see 1.4 Pin Identification.

**Remark 2.** When using the microcontroller for an application where the noise generated inside the microcontroller must be reduced, it is recommended to supply separate powers to the VDD, EVDD0, and EVDD1 pins and connect the Vss, EVSS0, and EVSS1 pins to separate ground lines.

- 100-pin plastic LQFP (14 × 20 mm, 0.65-mm pitch)

**Caution 1.** Connect the EVss0 and EVss1 pins to the same ground as the Vss pin.

**Caution 2.** Make sure that the voltage on the Vdd pin is no less than that on the EVdd0 and EVdd1 pins. Also make sure that the voltage on the EVdd0 is the same as that on the EVdd1 pin.

**Caution 3.** Connect the REGC pin to Vss via a capacitor (0.47 to 1 µF).

**Remark 1.** For pin identification, see **1.4 Pin Identification**.

**Remark 2.** When using the microcontroller for an application where the noise generated inside the microcontroller must be reduced, it is recommended to supply separate powers to the Vdd, EVdd0, and EVdd1 pins and connect the Vss, EVss0, and EVss1 pins to separate ground lines.

**Remark 3.** Functions in parentheses in the above figure can be assigned via settings in the peripheral I/O redirection register (PIOR). Refer to **Figure 4 - 10 Format of Peripheral I/O Redirection Register (PIOR)** in the RL78/G23 User's Manual.

### 1.3.11 128-pin products

- 128-pin plastic LFQFP (14 × 20 mm, 0.50-mm pitch)

**Caution 1.** Connect the EV<sub>SS0</sub> and EV<sub>SS1</sub> pins to the same ground as the V<sub>SS</sub> pin.

**Caution 2.** Make sure that the voltage on the V<sub>DD</sub> pin is no less than that on the EV<sub>DD0</sub> and EV<sub>DD1</sub> pins. Also make sure that the voltage on the EV<sub>DD0</sub> is the same as that on the EV<sub>DD1</sub> pin.

**Caution 3.** Connect the REGC pin to V<sub>SS</sub> via a capacitor (0.47 to 1  $\mu$ F).

**Remark 1.** For pin identification, see **1.4 Pin Identification**.

**Remark 2.** When using the microcontroller for an application where the noise generated inside the microcontroller must be reduced, it is recommended to supply separate powers to the V<sub>DD</sub>, EV<sub>DD0</sub>, and EV<sub>DD1</sub> pins and connect the V<sub>SS</sub>, EV<sub>SS0</sub>, and EV<sub>SS1</sub> pins to separate ground lines.

**Remark 3.** Functions in parentheses in the above figure can be assigned via settings in the peripheral I/O redirection register (PIOR). Refer to **Figure 4 - 10 Format of Peripheral I/O Redirection Register (PIOR)** in the RL78/G23 User's Manual.

EVDD0, EVDD1:	Power supply for port	SCL30, SCL31:	Serial clock output
EVss0, EVss1:	Ground for port	SDAA0, SDAA1, SDA00,	
EXCLK:	External clock input (main system clock)	SDA01, SDA10, SDA11, SDA20, SDA21, SDA30,	
EXCLKS:	External clock input (subsystem clock)	SDA31:	Serial data input/output
INTP0 to INTP11:	Interrupt request from peripheral modules	SI00, SI01, SI10, SI11, SI20, SI21, SI30, SI31:	Serial data input
IVCMP0, IVCMP1:	Comparator input	SO00, SO01, SO10, SO11, SO20, SO21,	
IVREF0, IVREF1:	Comparator reference input	SO30, SO31:	Serial data output
KR0 to KR7:	Key return	TSCAP:	Touch sensor capacitance
P00 to P07:	Port 0	TI00 to TI07, TI10 to TI17:	Timer input
P10 to P17:	Port 1	TO00 to TO07,	
P20 to P27:	Port 2	TO10 to TO17:	Timer output
P30 to P37:	Port 3	TOOL0:	Data input/output for tool
P40 to P47:	Port 4	TOOLRxD, TOOLTxD:	Data input/output for external device
P50 to P57:	Port 5	TS00 to TS15, TS20 to TS35:	Capacitive sensor
P60 to P67:	Port 6	TxD0 to TxD3,	
P70 to P77:	Port 7	TxDA0, TxDA1:	Transmit data
P80 to P87:	Port 8	VBAT:	Battery backup power supply
P90 to P97:	Port 9	VCOUT0, VCOUT1:	Comparator output
P100 to P106:	Port 10	VDD:	Power supply
P110 to P117:	Port 11	VSS:	Ground
P120 to P127:	Port 12	X1, X2:	Crystal oscillator (main system clock)
P130, P137:	Port 13	XT1, XT2:	Crystal oscillator (subsystem clock)
P140 to P147:	Port 14		
P150 to P156:	Port 15		

## 1.5 Block Diagram

**Caution 1.** 32- to 128-pin products incorporate the remote control signal receiver.

**Caution 2.** 36- to 128-pin products incorporate the serial interface UARTA.

**Caution 3.** 40- to 128-pin products incorporate the key return function.

**Remark** m: Unit number, n: Channel number, p: CSI number, q: UART number, r: Simplified I<sup>2</sup>C number, xx: Port number

## 1.6 Outline of Functions

[30-, 32-, 36-, 40-, 44-, and 48-pin products]

**Caution** This outline describes the functions at the time when peripheral I/O redirection register (PIOR) is set to 00H.

## <R> 2. Electrical Characteristics

<R> This section describes the electrical characteristics of the following products.

- 2D: Consumer applications, TA = -40 to +85°C  
R7F100Gxx2Dxx
- 3C: Industrial applications, TA = -40 to +105°C  
R7F100Gxx3Cxx

- <R> **Caution 1.** RL78 microcontrollers have on-chip debugging functionality for use in the development and evaluation of user systems. Do not use on-chip debugging with products designated as part of mass production, because using this function may cause the guaranteed number of times the flash memory is rewritten to be exceeded, and product reliability therefore cannot be guaranteed. Renesas Electronics is not liable for problems occurring when on-chip debugging is used with products designated as part of mass production.
- <R> **Caution 2.** For the consumer application products, the ambient operating temperature of TA = -40°C to +85°C applies.
- <R> **Caution 3.** For products that do not have an EVDD0, EVDD1, EVSS0, or EVSS1 pin, read EVDD0 and EVDD1 as VDD, and EVSS0 and EVSS1 as Vss.
- <R> **Caution 4.** The present pins differ depending on the products. For details, see section 2.1 Functions of Port Pins through section 2.2.1 Functions for each product in the RL78/G23 User's Manual.

## 2.1 Absolute Maximum Ratings

Item	Symbols	Conditions	Ratings	Unit
Supply voltage	VDD		-0.5 to +6.5	V
	EVDD0, EVDD1	EVDD0 = EVDD1	-0.5 to +6.5	V
	EVSS0, EVSS1	EVSS0 = EVSS1	-0.5 to +0.3	V
REGC pin input voltage	VIREGC	REGC	-0.3 to +2.1 and -0.3 to VDD + 0.3 Note 1	V
Input voltage	VI1	P00 to P07, P10 to P17, P30 to P37, P40 to P47, P50 to P57, P64 to P67, P70 to P77, P80 to P87, P90 to P97, P100 to P106, P110 to P117, P120, P125 to P127, P140 to P147	-0.3 to EVDD0 + 0.3 and -0.3 to VDD + 0.3 Note 2	V
	VI2	P60 to P63 (N-ch open-drain)	-0.3 to +6.5	V
	VI3	P20 to P27, P121 to P124, P137, P150 to P156, EXCLK, EXCLKS, RESET	-0.3 to VDD + 0.3 Note 2	V
Output voltage	VO1	P00 to P07, P10 to P17, P30 to P37, P40 to P47, P50 to P57, P60 to P67, P70 to P77, P80 to P87, P90 to P97, P100 to P106, P110 to P117, P120, P125 to P127, P130, P140 to P147	-0.3 to EVDD0 + 0.3 and -0.3 to VDD + 0.3 Note 2	V
	VO2	P20 to P27, P121, P122, P150 to P156	-0.3 to VDD + 0.3 Note 2	V
Analog input voltage	VAI1	ANI16 to ANI26	-0.3 to EVDD0 + 0.3 and -0.3 to AVREFP + 0.3 Notes 2, 3	V
	VAI2	ANI0 to ANI14	-0.3 to VDD + 0.3 and -0.3 to AVREFP + 0.3 Notes 2, 3	V

&lt;R&gt;

**Note 1.** Connect the REGC pin to Vss via a capacitor (0.47 to 1  $\mu$ F). The listed value is the absolute maximum rating of the REGC pin. Only use the capacitor connection. Do not apply a specific voltage to this pin.

**Note 2.** This voltage must be no higher than 6.5 V.

**Note 3.** The voltage on a pin in use for A/D conversion must not exceed AVREFP + 0.3.

**Caution** Product quality may suffer if the absolute maximum rating is exceeded even momentarily for any parameter. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions that ensure that the absolute maximum ratings are not exceeded.

**Remark 1.** The characteristics of functions multiplexed on a given pin are the same as those for the port pin unless otherwise specified.

**Remark 2.** AVREFP refers to the positive reference voltage of the A/D converter.

**Remark 3.** The reference voltage is Vss.

## 2.2 Characteristics of the Oscillators

### <R> 2.2.1 Characteristics of the X1 oscillator

( $TA = -40$  to  $+105^\circ C$ ,  $1.6 V \leq VDD \leq 5.5 V$ ,  $VSS = 0 V$ )

Item	Resonator	Conditions	Min.	Typ.	Max.	Unit
X1 clock oscillation allowable input cycle time <small>Note</small>	Ceramic resonator/ crystal resonator		0.05		1	$\mu s$

**Note** The listed time and frequency indicate permissible ranges of the oscillator. For actual applications, request evaluation by the manufacturer of the oscillator circuit mounted on a board so you can use appropriate values. Refer to AC Characteristics for instruction execution time.

**Caution** Since the CPU is started by the high-speed on-chip oscillator clock after release from the reset state, the user should use the oscillation stabilization time counter status register (OSTC) to check the X1 clock oscillation stabilization time. Specify the values for the oscillation stabilization time in the OSTC register and the oscillation stabilization time select register (OSTS) after having sufficiently evaluated the oscillation stabilization time with the resonator to be used.

### <R> 2.2.2 Characteristics of the XT1 oscillator

( $TA = -40$  to  $+105^\circ C$ ,  $2.4 V \leq VDD \leq 5.5 V$  for the 30- to 36-pin products,  $1.6 V \leq VDD \leq 5.5 V$  for the 40- to 128-pin products,  $VSS = 0 V$ )

**Note 1.** Device operation is guaranteed at the listed currents even if current is flowing from the EVDD0, EVDD1, or VDD pin to an output pin.

**Note 2.** The combination of these and other pins must also not exceed the value for maximum total current.

**Note 3.** The listed currents apply when the duty cycle is no greater than 70%. Use the following formula to calculate the output current when the duty cycle is greater than 70%, where n is the duty cycle.

- Total output current from the listed pins =  $(IOH \times 0.7)/(n \times 0.01)$

Example when n = 80% and IOH = -10.0 mA

Total output current from the listed pins =  $(-10.0 \times 0.7)/(80 \times 0.01) \approx -8.7 \text{ mA}$

Note that the duty cycle has no effect on the current that is allowed to flow into a single pin. A current higher than the absolute maximum rating must not flow into a single pin.

(Notes, Caution, and Remark continue on the next page.)

- Note 4.** The maximum value is -30 mA in the products for industrial applications (R7F100Gxx3Cxx) with an ambient operating temperature range of 85°C to 105°C.
- Note 5.** The maximum value is -50 mA in the products for industrial applications (R7F100Gxx3Cxx) with an ambient operating temperature range of 85°C to 105°C.
- Note 6.** The maximum values are respectively -100 mA and -60 mA in the products for industrial applications (R7F100Gxx3Cxx) with an ambient operating temperature range of -40°C to 85°C and of 85°C to 105°C.

(Notes and Remarks continue on the next page.)

- Note 1.** This current flows into VDD.
- Note 2.** The listed currents apply when the high-speed on-chip oscillator, middle-speed on-chip oscillator, and high-speed system clock are stopped.
- Note 3.** This current flows into the realtime clock (RTC). It does not include the operating current of the low-speed on-chip oscillator or the XT1 oscillator. The supply current of the RL78 microcontrollers is the sum of either IDD1 or IDD2, and IRTC, when the realtime clock is operating or in the HALT mode. When the low-speed on-chip oscillator is selected, IFIL should be included in the supply current. IDD2 in the subsystem clock operation mode includes the operating current of the realtime clock.
- Note 4.** This current only flows to the 32-bit interval timer. It does not include the operating current of the low-speed on-chip oscillator or the XT1 oscillator. The supply current of the RL78 microcontrollers is the sum of either IDD1 or IDD2, and IIT, when the 32-bit interval timer is operating or in the HALT mode. When the low-speed on-chip oscillator is selected, IFIL should be included in the supply current.
- Note 5.** This current only flows to the watchdog timer. It includes the operating current of the low-speed on-chip oscillator. The supply current of the RL78 microcontrollers is the sum of IDD1, IDD2 or IDD3 and IWDT when the watchdog timer is operating.
- Note 6.** This current only flows to the A/D converter. The supply current of the RL78 microcontrollers is the sum of IDD1 or IDD2 and IADC when the A/D converter is operating or in the HALT mode.
- Note 7.** This current flows into AVREFP.
- Note 8.** This current only flows to the D/A converter. The supply current of the RL78 microcontrollers is the sum of the values of either IDD1 or IDD2, and IDAC, when the D/A converter is operating or in the HALT mode.
- Note 9.** This current only flows to the comparator. The supply current of the RL78 microcontrollers is the sum of IDD1, IDD2 or IDD3 and ICMP when the comparator is in operation.
- Note 10.** This current only flows to the LVD circuit. The supply current of the RL78 microcontrollers is the sum of IDD1, IDD2 or IDD3 and ILVD when the LVD circuit is in operation.
- Note 11.** This current only flows during self programming.
- Note 12.** This current only flows while the data flash memory is being rewritten.
- Note 13.** This current only flows into the SNOOZE mode sequencer. Note that the operating current of the low-speed on-chip oscillator and the XT1 oscillator are not included. The supply current of the RL78 microcontrollers is the sum of either IDD1 or IDD2, and ISMS, when the SNOOZE mode sequencer is operating or in the HALT mode.
- Note 14.** For shift time to the SNOOZE mode, see **23.3.3 SNOOZE mode** in the RL78/G23 User's Manual.
- Note 15.** This current flows into the remote control signal receiver. It does not include the operating current of the low-speed on-chip oscillator or the XT1 oscillator. The supply current of the RL78 microcontrollers is the sum of either IDD1 or IDD2, and IIT, when the remote control signal receiver is operating or in the HALT mode. When the low-speed on-chip oscillator is selected, IFIL should be included in the supply current.
- Note 16.** This current is added to the supply current in the HALT mode when the setting of RTCLPC is 0 in the STOP mode, or when the setting of RTCLPC is 0 with the subsystem clock X (fsx) selected as the CPU clock, while the subsystem clock X (fsx) is oscillating.
- Note 17.** This current is added to the supply current when the output voltage control port is set.
- Note 18.** This current does not include the current flowing into the I/O port pins.
- Note 19.** The listed values apply when the SNOOZE mode sequencer is in normal operation equivalent to IDD1. They do not include the current flowing into the peripheral functions other than the SNOOZE mode sequencer.
- Note 20.** This current only flows to EVDD0 and EVDD1.

**Remark 1.** fil: Low-speed on-chip oscillator clock frequency

**Remark 2.** fsx: Subsystem clock X frequency

**Remark 3.** fCLK: CPU/peripheral hardware clock frequency

**Remark 4.** The typical value for the ambient operating temperature (TA) is 25°C unless otherwise specified.

**Note 1.** This value does not include the quantization error ( $\pm 1/2$  LSB).

**Note 2.** This value is indicated as a ratio (%FSR) to the full-scale value.

**Note 3.** When pins ANI16 to ANI31 are selected as the target pins for conversion, the maximum values are as follows.

Overall error: Add  $\pm 3$  LSB to the maximum value.

Zero-scale/full-scale error: Add  $\pm 0.04\%$ FSR to the maximum value.

**Note 4.** When reference voltage (+) = VDD and reference voltage (-) = Vss, the maximum values are as follows.

Overall error: Add  $\pm 10$  LSB to the maximum value.

Zero-scale/full-scale error: Add  $\pm 0.25\%$ FSR to the maximum value.

Integral linearity error: Add  $\pm 4$  LSB to the maximum value.

**Note 5.** When AVREFP < VDD, the maximum values are as follows.

Overall error/zero-scale error/full-scale error: Add  $(\pm 0.75 \text{ LSB} \times (\text{VDD voltage (V)} - \text{AVREFP voltage (V)}))$  to the maximum value.

Integral linearity error: Add  $(\pm 0.2 \text{ LSB} \times (\text{VDD voltage (V)} - \text{AVREFP voltage (V)}))$  to the maximum value.

**Note 6.** When the internal reference voltage or the temperature sensor output voltage is selected as the target for conversion, the sampling time must be at least 5  $\mu$ s. Accordingly, use standard mode 2 with the longer sampling time, and use the conversion clock (fAD) of no more than 16 MHz.

<R> **Note 7.** If the internal reference voltage or temperature sensor output voltage is to be A/D converted, VDD must be at least 1.8 V.

## 3. When the internal reference voltage is selected as reference voltage (+)

( $T_A = -40$  to  $+105^\circ\text{C}$ ,  $1.8 \text{ V} \leq V_{DD} \leq 5.5 \text{ V}$ ,  $V_{SS} = 0 \text{ V}$ , low-voltage modes 1 and 2,  
reference voltage (+) = internal reference voltage ( $\text{ADREFP1} = 1$ ,  $\text{ADREFP0} = 0$ ),  
reference voltage (-) =  $\text{AVREFM}$  ( $\text{ADREFM} = 1$ )

**Note 1.** This value does not include the quantization error ( $\pm 1/2 \text{ LSB}$ ).

**Note 2.** This value is indicated as a ratio (%FSR) to the full-scale value.

**Note 3.** Refer to 2.6.2 Temperature sensor/internal reference voltage characteristics.

**Note 4.** When reference voltage (-) is selected as  $V_{SS}$ , the maximum values are as follows.

Zero-scale error: Add  $\pm 0.35\%$ FSR to the maximum value.

Integral linearity error: Add  $\pm 0.5$  LSB to the maximum value.

### 2.6.2 Temperature sensor/internal reference voltage characteristics

### 2.6.7 Power supply voltage rising slope characteristics

(TA = -40 to +105°C, Vss = 0 V)

Item	Symbol	Conditions	Min.	Typ.	Max.	Unit
Power supply voltage rising slope	SVDD				54	V/ms

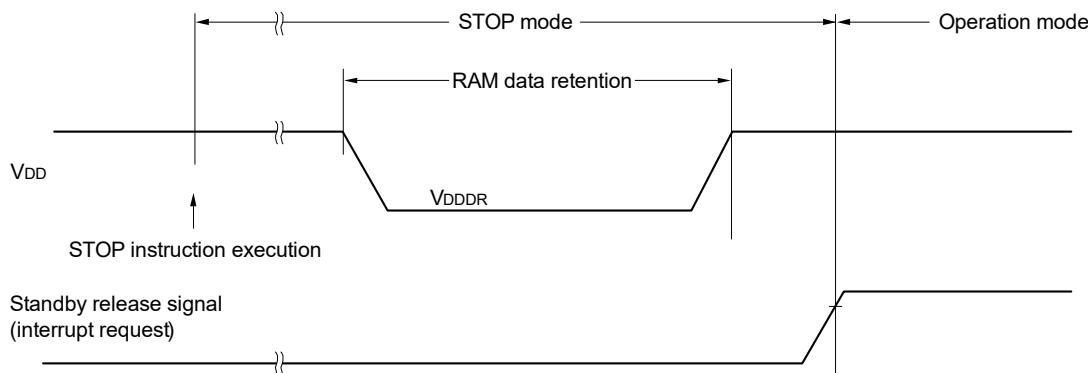

**Caution** Make sure to keep the internal reset state by the LVD0 circuit or an external reset until VDD reaches the operating voltage range shown in AC characteristics.

## 2.7 RAM Data Retention Characteristics

( $T_A = -40$  to  $+105^\circ\text{C}$ ,  $V_{SS} = 0\text{V}$ )

Item	Symbol	Conditions	Min.	Typ.	Max.	Unit
Data retention supply voltage	$V_{DDDR}$		1.43 <small>Note</small>		5.5	V

**Note** This voltage depends on the POR detection voltage. When the voltage drops, the data in RAM are retained until a POR is applied, but are not retained following a POR.

## 2.8 Flash Memory Programming Characteristics

( $T_A = -40$  to  $+105^\circ\text{C}$ ,  $1.6\text{ V} \leq V_{DD} \leq 5.5\text{ V}$ ,  $V_{SS} = 0\text{ V}$ )

Item	Symbol	Conditions	Min.	Typ.	Max.	Unit

		Retained for 20 years $T_A = 85^\circ\text{C}$	10,000			

**Note 1.** 1 erase + 1 write after the erase is regarded as 1 rewrite. The retaining years are until next rewrite after the rewrite.

**Note 2.** The listed numbers of times apply when using flash memory programmer and Renesas Electronics self programming library.

**Note 3.** These are the characteristics of the flash memory and the results obtained from reliability testing by Renesas Electronics Corporation.

1.00	Apr 13, 2021	—	First edition issued
1.10	Nov 18, 2021	All	The module name for 3-wire SPI was changed to simplified SPI.
		All	The module name for SPI was changed to simplified SPI.
		p.1	The operating current in the title was modified.
		p.1	1.1 Features: The descriptions of Middle-speed on-chip oscillator were modified.
		p.2	1.1 Features: The descriptions of Timers were modified.
		p.4	Figure 1 - 1 Part Number, Memory Size, and Package of RL78/G23 was modified.
		p.11	1.3.4 40-pin products: Figure was modified.
		p.12	1.3.5 44-pin products: Figure was modified.
		p.13	1.3.6 48-pin products: Note 2 was modified.
		p.13	1.3.6 48-pin products: Remark 3 was added.
		p.23	1.5 Block Diagram was modified.
		p.24 to p.26	1.6 Outline of Functions [30-, 32-, 36-, 40-, 44-, and 48-pin products]: The descriptions were modified.
		p.27 to p.29	1.6 Outline of Functions [52-, 64-, 80-, 100-, and 128-pin products]: The descriptions were modified.
		p.31	2.1 Absolute Maximum Ratings: Note was modified.
		p.32	2.2.1 Characteristics of the X1 and XT1 oscillators: Condition was modified.
		p.35	2.3.1 Pin characteristics: Notes 4 to 6 were modified.
		p.36, p.37	2.3.1 Pin characteristics: Notes 3, 5, and 6 were modified.
		p.43 to p.49	2.3.2 Supply current characteristics, (1) 30- to 64-pin package products with 96- to 128-Kbyte flash ROM: The descriptions in the tables were modified.
		p.50 to p.56	2.3.2 Supply current characteristics, (2) 30- to 64-pin package products with 192- to 256-Kbyte flash ROM and 80-pin package product with 128- to 256-Kbyte flash ROM was added.
		p.57 to p.63	2.3.2 Supply current characteristics, (3) 44- to 80-pin package products with 384- to 768-Kbyte flash ROM and 100- to 128-pin package products was added.
		p.64 to p.66	2.3.2 Supply current characteristics, (4) Peripheral Functions (Common to all products): The descriptions in the tables were added. Notes 13, 14, and 16 were modified. Note 19 was modified.
		p.102	2.5.2 Serial interface UARTA: The table was modified.
		p.106	2.6.1 A/D converter characteristics, (1) Normal modes 1 and 2: The descriptions in the table were modified.
		p.108	2.6.1 A/D converter characteristics, (2) Low-voltage modes 1 and 2: The descriptions in the table were modified.
		P.110	2.6.1 A/D converter characteristics, (3) When the internal reference voltage is selected as reference voltage (+): The descriptions in the table were modified.
		p.111	2.6.4 Comparator characteristics: The descriptions in the table were modified.
		p.114	2.6.6 LVD circuit characteristics, (2) LVD1 Detection Voltage of Reset Mode and Interrupt Mode: The table was modified.
		p.117	2.8 Flash Memory Programming Characteristics, (2) Data flash memory: The descriptions in the table were modified.
		p.123	3.4 40-Pin Products: The figure was added.
		p.126	3.6 48-Pin Products: The figure was added.

# General Precautions in the Handling of Microprocessing Unit and Microcontroller Unit Products

The following usage notes are applicable to all Microprocessing unit and Microcontroller unit products from Renesas. For detailed usage notes on the products covered by this document, refer to the relevant sections of the document as well as any technical updates that have been issued for the products.

## 1. Precaution against Electrostatic Discharge (ESD)

A strong electrical field, when exposed to a CMOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop the generation of static electricity as much as possible, and quickly dissipate it when it occurs. Environmental control must be adequate. When it is dry, a humidifier should be used. This is recommended to avoid using insulators that can easily build up static electricity.

Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors must be grounded. The operator must also be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions must be taken for printed circuit boards with mounted semiconductor devices.

## 2. Processing at power-on

The state of the product is undefined at the time when power is supplied. The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the time when power is supplied. In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the time when power is supplied until the reset process is completed. In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the time when power is supplied until the power reaches the level at which resetting is specified.

## 3. Input of signal during power-off state

Do not input signals or an I/O pull-up power supply while the device is powered off. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Follow the guideline for input signal during power-off state as described in your product documentation.

## 4. Handling of unused pins

Handle unused pins in accordance with the directions given under handling of unused pins in the manual. The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of the LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible.

## 5. Clock signals

After applying a reset, only release the reset line after the operating clock signal becomes stable. When switching the clock signal during program execution, wait until the target clock signal is stabilized. When the clock signal is generated with an external resonator or from an external oscillator during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Additionally, when switching to a clock signal produced with an external resonator or by an external oscillator while program execution is in progress, wait until the target clock signal is stable.

## 6. Voltage application waveform at input pin

Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between  $V_{IL}$  (Max.) and  $V_{IH}$  (Min.) due to noise, for example, the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between  $V_{IL}$  (Max.) and  $V_{IH}$  (Min.).

## 7. Prohibition of access to reserved addresses

Access to reserved addresses is prohibited. The reserved addresses are provided for possible future expansion of functions. Do not access these addresses as the correct operation of the LSI is not guaranteed.

## 8. Differences between products

Before changing from one product to another, for example to a product with a different part number, confirm that the change will not lead to problems. The characteristics of a microprocessing unit or microcontroller unit products in the same group but having a different part number might differ in terms of internal memory capacity, layout pattern, and other factors, which can affect the ranges of electrical characteristics, such as characteristic values, operating margins, immunity to noise, and amount of radiated noise. When changing to a product with a different part number, implement a system-evaluation test for the given product.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation or any other use of the circuits, software, and information in the design of your product or system. Renesas Electronics disclaims any and all liability for any losses and damages incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics hereby expressly disclaims any warranties against and liability for infringement or any other claims involving patents, copyrights, or other intellectual property rights of third parties, by or arising from the use of Renesas Electronics products or technical information described in this document, including but not limited to, the product data, drawings, charts, programs, algorithms, and application examples.
3. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You shall be responsible for determining what licenses are required from any third parties, and obtaining such licenses for the lawful import, export, manufacture, sales, utilization, distribution or other disposal of any products incorporating Renesas Electronics products, if required.
5. You shall not alter, modify, copy, or reverse engineer any Renesas Electronics product, whether in whole or in part. Renesas Electronics disclaims any and all liability for any losses or damages incurred by you or third parties arising from such alteration, modification, copying or reverse engineering.
6. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The intended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; industrial robots; etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control (traffic lights); large-scale communication equipment; key financial terminal systems; safety control equipment; etc.

Unless expressly designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not intended or authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems; surgical implantations; etc.), or may cause serious property damage (space system; undersea repeaters; nuclear power control systems; aircraft control systems; key plant systems; military equipment; etc.). Renesas Electronics disclaims any and all liability for any damages or losses incurred by you or any third parties arising from the use of any Renesas Electronics product that is inconsistent with any Renesas Electronics data sheet, user's manual or other Renesas Electronics document.

7. No semiconductor product is absolutely secure. Notwithstanding any security measures or features that may be implemented in Renesas Electronics hardware or software products, Renesas Electronics shall have absolutely no liability arising out of any vulnerability or security breach, including but not limited to any unauthorized access to or use of a Renesas Electronics product or a system that uses a Renesas Electronics product. RENESAS ELECTRONICS DOES NOT WARRANT OR GUARANTEE THAT RENESAS ELECTRONICS PRODUCTS, OR ANY SYSTEMS CREATED USING RENESAS ELECTRONICS PRODUCTS WILL BE INVULNERABLE OR FREE FROM CORRUPTION, ATTACK, VIRUSES, INTERFERENCE, HACKING, DATA LOSS OR THEFT, OR OTHER SECURITY INTRUSION ("Vulnerability Issues"). RENESAS ELECTRONICS DISCLAIMS ANY AND ALL RESPONSIBILITY OR LIABILITY ARISING FROM OR RELATED TO ANY VULNERABILITY ISSUES. FURTHERMORE, TO THE EXTENT PERMITTED BY APPLICABLE LAW, RENESAS ELECTRONICS DISCLAIMS ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, WITH RESPECT TO THIS DOCUMENT AND ANY RELATED OR ACCOMPANYING SOFTWARE OR HARDWARE, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE.
8. When using Renesas Electronics products, refer to the latest product information (data sheets, user's manuals, application notes, "General Notes for Handling and Using Semiconductor Devices" in the reliability handbook, etc.), and ensure that usage conditions are within the ranges specified by Renesas Electronics with respect to maximum ratings, operating power supply voltage range, heat dissipation characteristics, installation, etc. Renesas Electronics disclaims any and all liability for any malfunctions, failure or accident arising out of the use of Renesas Electronics products outside of such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of Renesas Electronics products, semiconductor products have specific characteristics, such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Unless designated as a high reliability product or a product for harsh environments in a Renesas Electronics data sheet or other Renesas Electronics document, Renesas Electronics products are not subject to radiation resistance design. You are responsible for implementing safety measures to guard against the possibility of bodily injury, injury or damage caused by fire, and/or danger to the public in the event of a failure or malfunction of Renesas Electronics products, such as safety design for hardware and software, including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult and impractical, you are responsible for evaluating the safety of the final products or systems manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. You are responsible for carefully and sufficiently investigating applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive, and using Renesas Electronics products in compliance with all these applicable laws and regulations. Renesas Electronics disclaims any and all liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. Renesas Electronics products and technologies shall not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You shall comply with any applicable export control laws and regulations promulgated and administered by the governments of any countries asserting jurisdiction over the parties or transactions.
12. It is the responsibility of the buyer or distributor of Renesas Electronics products, or any other party who distributes, disposes of, or otherwise sells or transfers the product to a third party, to notify such third party in advance of the contents and conditions set forth in this document.
13. This document shall not be reprinted, reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
14. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products.

(Note1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its directly or indirectly controlled subsidiaries.

(Note2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
