

### 3-Terminal 1.5A Negative Voltage Regulator

#### Description

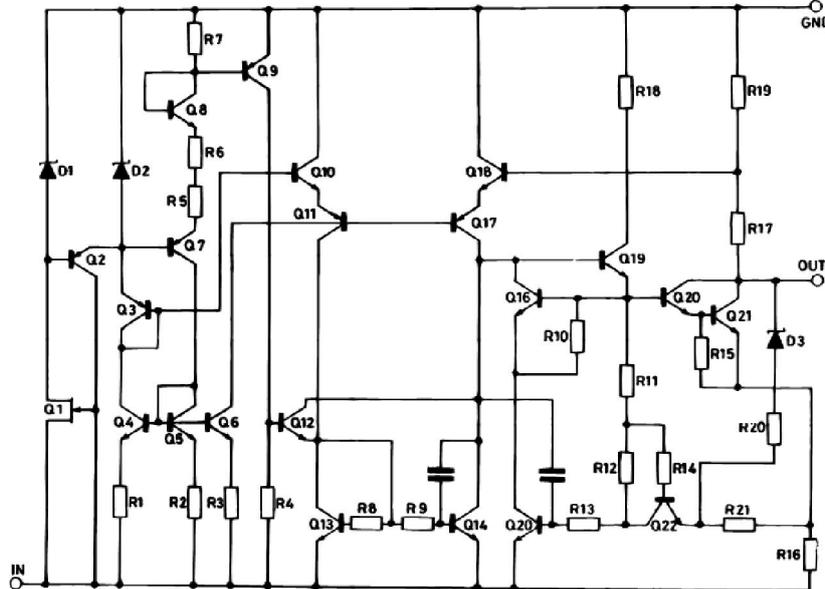

The 7915 three-terminal negative regulators is available in TO-220AB packages and several fixed output voltages, making it useful in a wide range of applications. These regulators can provide local on-card regulation, eliminating the distribution problems associated with single point regulation; furthermore, having the same voltage as the 7815 positive, they are particularly suited for split power supplies. If adequate heat sinking is provided, they can deliver over 1.5 A output current. Although designed primarily as fixed voltage regulators, these devices can be used with external components to obtain adjustable voltages and currents.

#### Features

- ◆ Output Current up to 1.5A
- ◆ Output Voltages of -15V
- ◆ Thermal Overload Protection
- ◆ Short Circuit Protection
- ◆ Output transition SOA protection
