CD74LPT245

December 1996

Fast CMOS 3.3V 8-Bit Bidirectional Transceiver

Features

- Advanced 0.6 micron CMOS Technology
- Compatible with LCX™ Families of Products
- Supports 5V Tolerant Mixed Signal Mode Operation
 - Input Can Be 3V or 5V
 - Output Can Be 3V or Connected to 5V Bus
- · Advanced Low Power CMOS Operation
- · Excellent Output Drive Capability:
 - Balanced Drives (24mA Sink and Source)
- Low Ground Bounce Outputs
- · Hysteresis on All Inputs

Description

The CD74LPT245 is an 8-bit bidirectional transceiver designed for asynchronous two-way communication between data buses. The transmit/receive input pin (T/\overline{R}) determines the direction of data flow through the bidirectional transceiver. Transmit (active HIGH) enables data from A ports to B ports, and receive (active LOW) from B ports to A ports. The output enable (\overline{OE}) input, when HIGH, disables both A and B ports by placing them in HIGH Z condition.

The CD74LPT245 can be driven from either 3.3V or 5.0V devices allowing this device to be used as a translator in a mixed 3.3/5.0V system.

Ordering Information

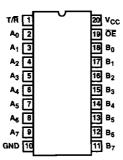

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
CD74LPT245AM	-40 to 85	20 Ld SOIC	M20.3-P
CD74LPT245AQM	-40 to 85	20 Ld QSOP	M20.15-P
CD74LPT245CM	-40 to 85	20 Ld SOIC	M20.3-P
CD74LPT245CQM	-40 to 85	20 Ld QSOP	M20.15-P
CD74LPT245M	-40 to 85	20 Ld SOIC	M20.3-P
CD74LPT245QM	-40 to 85	20 Ld QSOP	M20.15-P

NOTE: QSOP is commonly known as SSOP.

When ordering, use the entire part number. Add the suffix 96 to obtain the variant in the tape and reel.

TRUTH TABLE (NOTE 1)

(NOTE 1) INPUTS		(NOTE 1)
ŌĒ	T/Ř	OUTPUTS
L	L	Bus B Data to Bus A
L	н	Bus A Data to Bus B
н	x	High Z State

NOTE:

- 1. H = HIGH Voltage Level
 - L = LOW Voltage Level
 - X = Don't Care
 - Z = High Impedance

Pin Descriptions

PIN NAME	DESCRIPTION
ŌĒ	Three-State Output Enable Inputs (Active LOW)
T/R	Direction Control Input
A ₇ -A ₀	Side A Inputs or Three-State Outputs
B ₇ -B ₀	Side B Inputs or Three-State Outputs
GND	Ground
v _{cc}	Power

Maximum Lead Temperature (Soldering 10s).....300°C

θ_{JA} (°C/W)

87

Operating Conditions

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

(Lead Tips Only)

NOTE:

2. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

NOTES:

- 3. For conditions shown as Max or Min, use appropriate value specified under Electrical Specifications for the applicable device type.
- Typical values are at V_{CC} = 3.3V, 25°C ambient and maximum loading.
- 5. Not more than one output should be shorted at one time. Duration of the test should not exceed one second.
- 6. This parameter is guaranteed but not tested.
- 7. VOH = VCC 0.6V at rated current.
- 8. This parameter is determined by device characterization but is not production tested.
- 9. Per TTL driven input; all other inputs at V_{CC} or GND.
- 10. This parameter is not directly testable, but is derived for use in Total Power Supply Calculations.
- 11. Values for these conditions are examples of the I_{CC} formula. These limits are guaranteed but not tested.
- 12. IC = IQUIESCENT + INPUTS + IDYNAMIC
 - $I_C = I_{CC} + \Delta I_{CC} D_H N_T + I_{CCD} (f_{CP}/2 + f_I N_I)$

I_{CC} = Quiescent Current

ΔICC = Power Supply Current for a TTL High Input

DH = Duty Cycle for TTL Inputs High

NT = Number of TTL Inputs at DH

I_{CCD} = Dynamic Current Caused by an Input Transition Pair (HLH or LHL)

f_{CP} = Clock Frequency for Register Devices (Zero for Non-Register Devices)

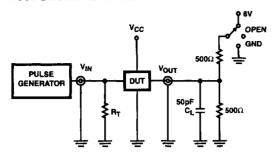

f_I = Input Frequency

N_I = Number of inputs at f_I

All currents are in milliamps and all frequencies are in megahertz.

- 13. Propagation Delays and Enable/Disable times are with V_{CC} = 3.3V ±0.3V, normal range. For V_{CC} = 2.7V, extended range, all Propagation Delays and Enable/Disable times should be degraded by 20%.
- 14. See test circuit and wave forms.
- 15. Minimum limits are guaranteed but not tested on Propagation Delays.
- 16. This parameter is guaranteed but not production tested.
- 17. Skew between any two outputs, of the same package, switching in the same direction. This parameter is guaranteed by design.

Test Circuits and Waveforms

NOTE:

18. Pulse Generator for All Pulses: Rate \leq 1.0MHz; $Z_{OUT} \leq$ 50 Ω ; $t_f, t_r \leq$ 2.5ns.
