Features

- Continuous Voltage-Controlled Resistance
- High Off-Isolation
- High Input Impedance
- Gain Ranging Capability
- Simplified Drive Voltage Capabilities
- No Circuit Interaction
- Wide Range Signal Attenuation
- Pin-for-Pin Replacement for Siliconix VCR11N

Benefits

- Wide Range Signal Attenuation
- Gain Ranging
- Simplified Gate Drive
- High Breakdown Voltage
- No Circuit Interaction

Applications

- Amplifier Gain Control
- Oscillator Amplitude Control
- Small Signal Attenuations
- Filters

Description

A voltage-controlled resistor (VCR) is a three-terminal variable resistor where the resistance value between two of the terminals is controlled by a voltage potential applied to the third. The VCR is capable of operation as a symmetrical resistor with no dc bias voltage in the signal loop, an ideal characteristic for many applications.

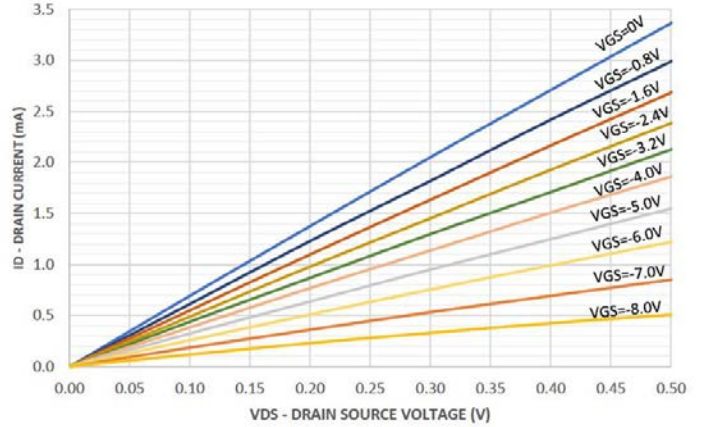

The VCR11N is specially intended for applications where the drain-source voltage is a low-level AC signal with no DC component. The key device performance is the predictable RDS change with no change in V_{GS} voltage. The VCR11N is available in the TO-71 6 lead package.

Notes

1. Absolute maximum ratings are limiting values above which serviceability may be impaired.
2. Pulse Test: PW ≤ 300μs, Duty Cycle ≤ 3%
3. All characteristics MIN/TYP/MAX numbers are absolute values. Negative values indicate electrical polarity only.
4. When ordering include the full Linear Systems part number and package type. Linear Systems creates custom parts on a case by case basis. To learn whether Linear Systems can meet your requirements, please send your drawing along with a detailed description of the device specifications to sales@linearsystems.com. One of our qualified representatives will contact you.
5. All standard parts are RoHS compliant. Contact the factory for availability of non-RoHS parts.
