**$I_H$**  = Hold Current – Maximum current at which the device will not trip at 23°C still air.

**$I_T$**  = Trip Current – Minimum current at which the device will always trip at 23°C still air.

**$V_{MAX}$**  = Maximum voltage device can withstand without damage at it's rated current.

**$I_{MAX}$**  = Maximum fault current device can withstand without damage at rated voltage (V max).

**$P_d$**  = Typical power dissipated from device when in the tripped state in 23°C still air environment.

**$R_{MIN}$**  = Minimum device resistance at 23°C.

**$R_{1MAX}$**  = Maximum device resistance at 23°C, 1 hour after tripping.

#### Warning:

-Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.  
 -PPTC device are intended for occasional overcurrent protection. Application for repeated overcurrent condition and/or prolonged trip are not anticipated.  
 -Avoid contact of PPTC device with chemical solvent. Prolonged contact may damage the device performance.

**Solder reflow**

\* Due to “Lead Free” nature, Temperature and Dwelling time for the soldering zone is higher than those for Regular. This may cause damage to other components.

1. Recommended maximum paste thickness > 0.25mm.
2. Devices can be cleaned using standard industry methods and aqueous solvents.
3. Rework use standard industry practices.
4. Storage Environment: < 30°C / 60%RH

**Caution:**

1. If reflow temperatures exceed the recommended profile, devices may not meet the performance requirements.
2. Devices are not designed to be wave soldered to the bottom side of the board.
