

700mA High Speed LDO Regulator

■ GENERAL DESCRIPTION

The XC6222 series is a highly accurate, low noise, high ripple rejection, low dropout, and low power consumption high speed voltage regulator. The series consists of a voltage reference, an error amplifier, a driver transistor, a current limiter, a thermal protection circuit, and a phase compensation circuit.

The CE function enables the entire circuit to be placed in a stand-by state by inputting a low level signal to the CE pin. In this stand-by mode, the electric charge at the output capacitor (CL) will be discharged by the internal auto-discharge switch, and as a result the VOUT pin will quickly return to the VSS level.

Over-current protection and thermal protection circuits are integrated. The protection circuit starts to operate when either output current reaches the current limit level or junction temperature reaches the temperature limit.

■ APPLICATIONS

- USB / HDMI products
- Optical disk drive
- Magnetic disk drive
- Smart phones / Mobile phones
- Portable game consoles
- Modules (wireless, cameras, etc.)
- E-book Reader / Electronic dictionaries

■ FEATURES

Maximum Output Current	: 700mA
Dropout Voltage	: 120mV @ I _{OUT} =300mA (V _{OUT} =3.0V)
Operating Voltage Range	: 1.7V ~ 6.0V
Output Voltage Accuracy	: 0.8V~5.0V (0.05V increments) : ±1% (V _{OUT} >2.0V) : ±0.02V (V _{OUT} ≤2.0V)
Low Power Consumption	: 100μA
High Ripple Rejection	: 65dB @ 1kHz
Low ESR Capacitor	: Ceramic capacitor
Chip Enable (CE)	: Active High, C _L discharge Standby Current below 0.1μA
Operating Ambient Temperature	: -40°C ~ 85°C
Packages	: USP-6C, SOT-25, SOT-89-5
Environmentally Friendly	: EU RoHS Compliant, Pb Free

■ TYPICAL APPLICATION CIRCUIT

SOT-25
(TOP VIEW)USP-6C
(TOP VIEW)

- *C_L: 2.2μF or higher (V_{OUT}=2.5 ~ 5.0V)
4.7μF or higher (V_{OUT}=2.1 ~ 2.45V)
6.8μF or higher (V_{OUT}=0.8 ~ 2.05V)

■ TYPICAL PERFORMANCE CHARACTERISTICS

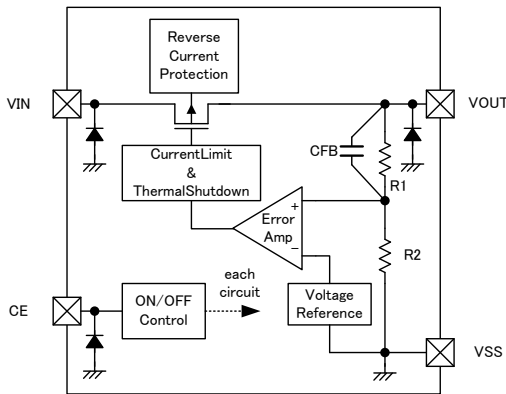

- Load Transient Response

XC6222x151

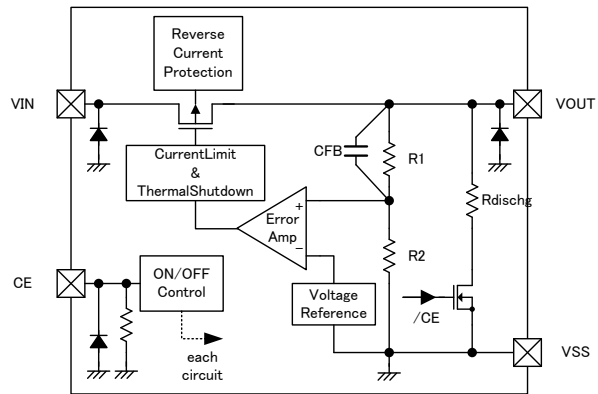

tr=tf=5 μs, V_{IN}=2.5V, T_a=25°C
V_{OUT}=1.0→300mA, C_N=1.0 μF(ceramic), C_L=6.8 μF(ceramic)

* Diodes inside the circuits are ESD protection diodes and parasitic diodes.

■ PRODUCT CLASSIFICATION

● Ordering Information

XC6222①②③④⑤⑥-⑦

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	Type of CE	A	without CE Pull-down resistor, without C _L discharge
		B	without CE Pull-down resistor, with C _L discharge
		C	with CE Pull-down resistor, without C _L discharge
		D (The Recommended Type)	with CE Pull-down resistor, with C _L discharge
②③	Output Voltage	08 ~ 50	e.g. 2.8V → ②=2, ③=8 Output Voltage Range : 0.8~5.0 V (0.05V increments)
④	Output Voltage Accuracy	1	Output voltage {x.x0v} (the 2 nd decimal place is "0") Accuracy±1% (V _{OUT} >2.0V), ±0.02V(V _{OUT} ≤2.0V)
		B	Output voltage {x.x5v} (the 2 nd decimal place is "5") Accuracy±1% (V _{OUT} >2.0V), ±0.02V(V _{OUT} ≤2.0V)
⑤⑥-⑦ ^(*)	Packages (Order Unit)	ER-G	USP-6C (3,000pcs/Reel)
		MR-G	SOT-25 (3,000pcs/Reel)
		PR-G	SOT-89-5 (1,000pcs/Reel)

^(*) The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

PIN CONFIGURATION

*The dissipation pad for the USP-6C package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the V_{SS} (No. 5) pin.

PIN ASSIGNMENT

PIN NUMBER			PIN NAME	FUNCTIONS
USP-6C	SOT-25	SOT-89-5		
1	1	4	V _{IN}	Power Input
3	5	5	V _{OUT}	Output
2,4	4	3	NC	No connection
5	2	2	V _{SS}	Ground
6	3	1	CE	ON/OFF Control

ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	RATINGS	UNITS
Input Voltage	V _{IN}	-0.3 ~ 6.5	V
Output Current	I _{OUT}	1400 ^(*1)	mA
Output Voltage	V _{OUT}	V _{SS} - 0.3 ~ 6.5	V
CE Input Voltage	V _{CE}	V _{SS} - 0.3 ~ 6.5	V
Power Dissipation	Pd	120 (IC only)	mW
		1000 (40mm x 40mm Standard board) ^(*2)	
		1250 (JESD51-7 board) ^(*2)

■ ELECTRICAL CHARACTERISTICS (Continued)

NOTE:

- * 1: Unless otherwise stated, input voltage is $V_{IN}=V_{OUT(T)}+1.0V$.
- * 2: $V_{OUT(E)}$ is effective output voltage (Refer to the voltage chart E-0 and E-1)
It is defined as output voltages when an amply stabilized $V_{OUT(T)}+1.0V$ is supplied to the V_{IN} pin while maintaining a certain I_{OUT} .
- * 3: The relation between $V_{OUT(E)}$ and $V_{OUT(T)}$ is shown in the voltage chart E-0 and E-1.
- * 4: $V_{OUT(T)}$ is nominal output voltage
- * 5: $V_{dif} = \{V_{IN1}-V_{OUT1}\}$
 V_{OUT1} equals 98% of the output voltage when amply stabilized $V_{OUT(T)}+1.0V$ are supplied to the V_{IN} pin.
 V_{IN1} is the input voltage when V_{OUT1} appears at the V_{OUT} pin while input voltage is gradually decreased.
- * 6: Reverse current (I_{REV}) flows from V_{OUT} to V_{IN} .
- * 7: V_{OUT} pin sink current (I_{REVS}) flows from V_{OUT} to V_{SS} .
- * 8: For the XC6222A/C series only. In the XC6222B/D series, the current flows from the V_{OUT} pin to the V_{SS} pin via the internal switch when CE pin is low. Please do not connect another power supply to the V_{OUT} pin. Please also note when the XC6222A/C series connects external power supply to the V_{OUT} pin, please use it within the range from $V_{OUT(E)}$ (actual output voltage value) or more to 6.0V or less. When the voltage less than $V_{OUT(E)}$ is applied to the V_{OUT} pin by adding a power supply or battery, a low level signal should be input to the CE pin for chip disable in order to protect a reverse current at $V_{IN} < V_{OUT}$.
- * 9: For the XC6222B/D series only. The XC6222A/C series discharges via two resistors R1 and R2 shown in the block diagram.

OPERATIONAL EXPLANATION

The voltage divided by two resistors R1 and R2 is compared with the internal reference voltage by the error amplifier. The P-channel MOSFET connected to the V_{OUT} pin, is then driven by the subsequent output signal. The output voltage at the V_{OUT} pin is controlled and stabilized by a system of negative feedback. The current limit and short protection operate in relation to the level of output current. The thermal protection operates in relation to the level of heat generation. The reverse current protection operates when V_{OUT} voltage is higher than V_{IN} voltage. Further, the IC's internal circuitry can be turned off via the CE pin's signal.

<Input and Output Capacitors>

The XC6222 needs an output capacitor C_L for phase compensation. Values required for the phase compensation are shown in the chart below. If a loss of the capacitance happens, stable phase compensation may not be obtained. Please ensure to use a capacitor which does not depend on bias or temperature too much. For a stable power input, please connect an input capacitor C_{IN} of 1.0μF between the V_{IN} pin and the V_{SS} pin.

● Output Capacitor (C_L) Table

OUTPUT VOLTAGE (V)	OUTPUT CAPACITOR VALUE
0.8V ~ 2.05V	C _L =6.8μF (MIN.)
2.1V ~ 2.45V	C _L =4.7μF (MIN.)
2.5V ~ 5.0V	C _L =2.2μF (MIN.)

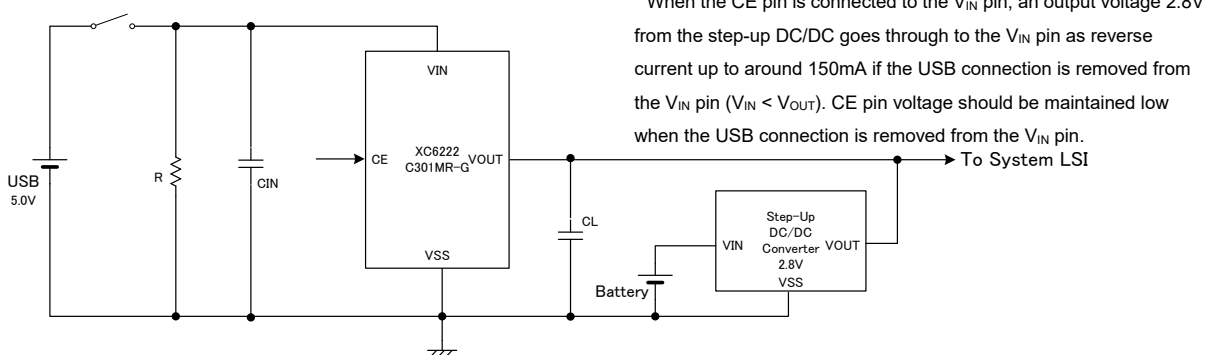

<Reverse Current Protection>

The XC6222 series includes reverse current protection to prevent the damage to any connected products such as batteries as a result of current flow from the V_{OUT} pin to the V_{IN} pin. When V_{IN} is smaller than V_{OUT}, the reverse current protection works and suppress the reverse current to 1.5μA (MAX.).

When V_{IN} is smaller than V_{OUT}, the V_{OUT} pin sink current flows from the V_{OUT} pin to the V_{SS} pin is 95μA (TYP.) as the IC operation current. With the XC6222A/C series, when a low level signal is inputted to the CE pin, the sink current of the V_{OUT} pin is minimized to 2.8μA (TYP.). However, with the XC6222B/D series, when a low level signal is inputted to the CE pin, the sink current of the V_{OUT} pin goes through the C_L auto discharge circuit to the V_{SS} pin which may result in the IC being damaged. In this case, please do not connect a power supply to the V_{OUT} pin.

Please also note when the XC6222A/C series connects external power supply to the V_{OUT} pin, please use it within the range from V_{OUT(E)} (actual output voltage value) or more to 6.0V or less. When the voltage less than V_{OUT(E)} is applied to the V_{OUT} pin by adding a power supply or battery, a low level signal should be input to the CE pin for chip disable in order to protect a reverse current at V_{IN} < V_{OUT}.

Example) The voltage less than V_{OUT(E)} (actual output voltage value) is applied to the V_{OUT} pin as "OR" connection.

■ OPERATIONAL EXPLANATION (Continued)

<Current Limiter, Short-Circuit Protection>

The XC6222 series' fold-back circuit operates as an output current limiter and a short protection circuit for the output pin. When the load current reaches the current limit level, the fixed current limiter circuit operates and output voltage drops. When the output pin is short-circuited to the V_{SS} pin, the current is decreased to a level of 55mA.

<Thermal Shutdown>

When the junction temperature of the built-in driver transistor reaches the temperature limit level (150°C TYP.), the thermal shutdown circuit operates and the driver transistor will be turned OFF. The IC resumes its operation when the thermal shutdown function is released and the IC's operation is automatically restored because the junction temperature drops to the level of 125°C (TYP.) as the thermal shutdown release voltage.

<CL Auto-Discharge Function>

XC6222B/D series can discharge the electric charge stored in the output capacitor (CL), when a low signal to the CE pin, which enables the whole IC circuit to be turned off, is inputted via the N-channel transistor located between the V_{OUT} pin and the V_{SS} pin (cf. BLOCK DIAGRAM). The CL auto-discharge resistance value is set at 530Ω(TYP.). The discharge time of the output capacitor (CL) is set by the CL auto-discharge resistance (R) and the output capacitor (CL). By setting the time constant of the CL auto-discharge resistance value [R_{DCHG}] and the output capacitor value (CL) as τ ($\tau = C \times R_{DCHG}$), the output voltage after discharge via the N-channel transistor is calculated by the following formula.

$$V = V_{OUT(E)} \times e^{-t/\tau}, \quad \text{or} \quad t = \tau \ln (V / V_{OUT(E)})$$

where

V	: Output voltage after discharge
V _{OUT(E)}	: Output voltage
t	: Discharge time
τ	: CL auto-discharge resistance R _{DCHG} × Output capacitor (CL) value C

<CE Pin>

The entire XC6222 circuitry can be turned off via the CE pin signal. In shutdown mode, output at the V_{OUT} pin will be pulled down to the V_{SS} level via R1 & R2. However, with the XC6222B series, the CL auto-discharge resistor is connected in parallel to R1 and R2 while the power supply is applied to the V_{IN} pin. Therefore, time until the V_{OUT} pin reaches the V_{SS} level is shorter. For the XC6222A/B series, the output voltage becomes unstable, when the CE pin is left open. If this CE pin voltage is set with the specified voltage range, the logic is fixed and the IC will operate normally. However, the supply current may increase as a result of shoot-through current in the IC's internal circuitry when a medium voltage is input to the CE pin. With the XC6222C/D series, when the CE pin is left open, output voltage is fixed to V_{SS} level.

■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current.
Please wire the input capacitor (C_{IN}) and the output capacitor (CL) as close to the IC as possible.
3. When starting up the IC, inrush current can occur, which can lead to the input voltage reduction. To contain the reduction of the input voltage, please take countermeasures such as adding an input capacitance.
4. Torex places an importance on improving our products and their reliability.
We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems.

TEST CIRCUITS

● Circuit ①

● Circuit ②

● Circuit ③

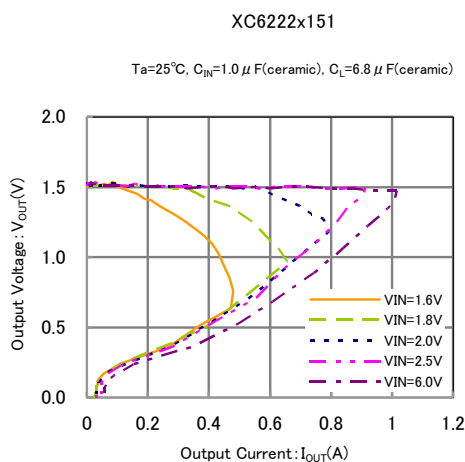

* C_{IN} : 1.0 μ F or higher
 C_L : 2.2 μ F or higher ($V_{OUT}=2.5\sim 5.0V$)
 4.7 μ F or higher ($V_{OUT}=2.1\sim 2.45V$)
 6.8 μ F or higher ($V_{OUT}=0.8\sim 2.05V$)

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.
