

## Good Transient Response Low Voltage 500mA LDO

NO.EA-241-190523

### OUTLINE

The RP111x Series are CMOS-based LDO regulators featuring 500mA output current. The input voltage is as low as 1.4V and the output voltage can be set from 0.7V. Due to a built-in 0.46Ω (at  $V_{OUT}=2.8V$ ) on-resistor, RP111x can provide a low dropout voltage. RP111x also features an excellent line transient response, ripple rejection at 75dB, and low noise. The output voltage accuracy is as high as  $\pm 0.8\%$  and the temperature drift coefficient of output voltage is low at  $\pm 30\text{ppm}/^\circ\text{C}$ . The accuracy of the output voltage of RP111x includes the temperature characteristics and the load transient response has been improved. The typ. and max value of under/overshoot for various output current are shown in the typical characteristics in the datasheet, therefore the accuracy of the output voltage estimation will be easy on the actual operating cases.

In addition to a fold-back protection circuit built into conventional regulators, RP111x contains a thermal shutdown circuit and an inrush current limit circuit. SOT-23-5 and SOT-89-5 packages, a 1.2mm square DFN1212-6 package are available.

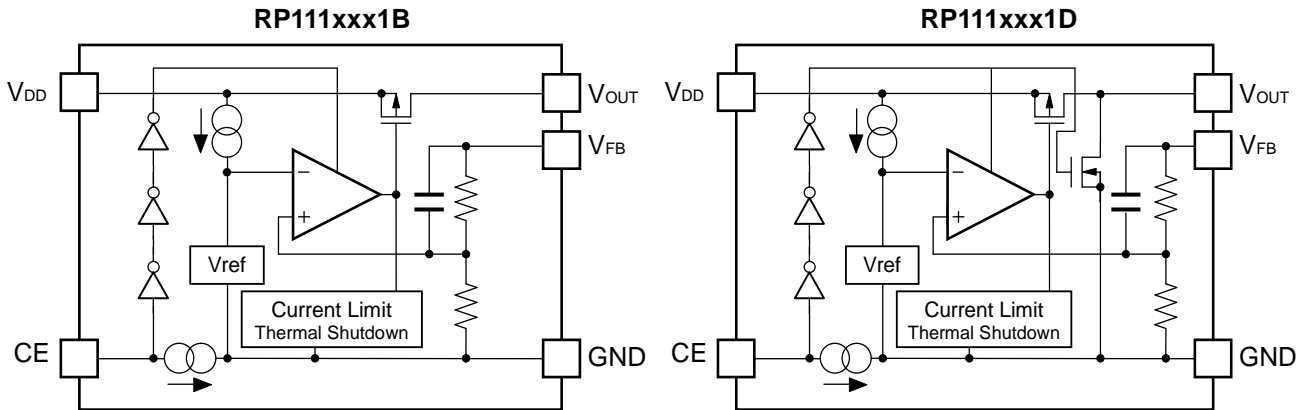

### FEATURES

- Supply Current ..... Typ. 80μA
- Standby Current ..... Typ. 0.1μA
- Dropout Voltage ..... Typ. 0.23V ( $I_{OUT}=500\text{mA}$ ,  $V_{OUT}=2.5V$ )
- Ripple Rejection ..... Typ. 75dB ( $f=1\text{kHz}$ )  
Typ. 70dB ( $f=10\text{kHz}$ )
- Output Voltage Accuracy .....  $\pm 0.8\%$  ( $V_{OUT} \geq 1.8V$ )
- Output Voltage Temperature Coefficient ..... Typ.  $\pm 30\text{ppm}/^\circ\text{C}$  ( $V_{OUT} \geq 1.8V$ )
- Line Regulation ..... Typ. 0.02%/V
- Packages ..... DFN1212-6, SOT-23-5, SOT-89-5,
- Input Voltage Range ..... 1.4V to 5.25V
- Output Voltage Range ..... 0.7V to 3.6V (0.1V steps)  
(For other voltages, please refer to MARK INFORMATION.)
- Built-in Foldback Protection Circuit ..... Typ. 50mA (Current at short mode)
- Thermal Shutdown Temperature ..... 165°C
- Inrush Current Limit ..... Typ. 400mA (for 180μs after start-up)
- Ceramic capacitors are recommended to be used with this IC ..... 1.0μF or more

### APPLICATIONS

- Power source for portable communication equipment.
- Power source for electrical appliances such as cameras, VCRs and camcorders.
- Power source for battery-powered equipments.
- Power source for electrical home appliances.

## BLOCK DIAGRAMS

## SELECTION GUIDE

The output voltage, auto discharge function, package for the ICs can be selected at the user's request.

Product Name	Package	Quantity per Reel	Pb Free	Halogen Free
RP111Lxx1*-TR	DFN1212-6	5,000 pcs	Yes	Yes
RP111Nxx1*-TR-FE	SOT-23-5	3,000 pcs	Yes	Yes
RP111Hxx1*-T1-FE	SOT-89-5	1,000 pcs	Yes	Yes

xxx: The output voltage can be designated in the range of 0.7V(07) to 3.6V(36) in 0.1V steps.  
(For other voltages, please refer to MARK INFORMATIONS.)

\* : Auto discharge function at off state are options as follows.  
(B) without auto discharge function at off state  
(D) with auto discharge function at off state

## PIN CONFIGURATIONS

## PIN DESCRIPTIONS

### • DFN1212-6

Pin No.	Symbol	Description
1	$V_{OUT}$	Output Pin
2	$V_{FB}$	Feed Back Pin
3	GND	Ground Pin
4	CE	Chip Enable Pin ("H" Active)
5	NC	No connection
6	$V_{DD}$	Input Pin

\*) Tab is GND level. (They are connected to the reverse side of this IC.)

The tab is better to be connected to the GND, but leaving it open is also acceptable.

### • SOT-23-5

Pin No	Symbol	Pin Description
1	$V_{DD}$	Input Pin
2	GND	Ground Pin
3	CE	Chip Enable Pin ("H" Active)
4	$V_{FB}$	Feed Back Pin
5	$V_{OUT}$	Output Pin

### • SOT-89-5

Pin No	Symbol	Pin Description
1	$V_{FB}$	Feed Back Pin
2	GND	Ground Pin
3	CE	Chip Enable Pin ("H" Active)
4	$V_{DD}$	Input Pin
5	$V_{OUT}$	Output Pin

Under normal conditions, please connect the  $V_{OUT}$  pin to the  $V_{FB}$  pin. However, in the case of adjusting the output voltage with the  $V_{FB}$  pin, please follow the "ADJUSTABLE OUTPUT VOLTAGE SETTING".

## ABSOLUTE MAXIMUM RATINGS

Symbol	Item	Rating	Unit
V <sub>IN</sub>	Input Voltage	6.0	V
V <sub>CE</sub>	Input Voltage (CE Pin)	-0.3~6.0	V
V <sub>OUT</sub>	Output Voltage	-0.3 to V <sub>IN</sub> +0.3	V
I <sub>OUT</sub>	Output Current	510	mA
P <sub>D</sub>	Power Dissipation (DFN1212-6)*	600	mW
	Power Dissipation (SOT-23-5) *	420	
	Power Dissipation (SOT-89-5) *	900	
T <sub>a</sub>	Operating Temperature Range	-40 to 85	°C
T <sub>stg</sub>	Storage Temperature Range	-55 to 125	°C

\*) For Power Dissipation, please refer to PACKAGE INFORMATION.

### ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause permanent damage and may degrade the life time and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

## ELECTRICAL CHARACTERISTICS

Unless otherwise noted,  $V_{IN} = \text{Set } V_{OUT} + 1.0V (V_{OUT} > 1.5)$ ,  $V_{IN} = 2.5V (V_{OUT} \leq 1.5V)$ ,  $I_{OUT} = 1mA$ ,  $C_{IN} = C_{OUT} = 1.0\mu F$ .

The specifications surrounded by    are guaranteed by Design Engineering at  $-40^{\circ}C \leq T_a \leq 85^{\circ}C$ .

● RP111xxx1B/D

$T_a = 25^{\circ}C$

Symbol	Item	Conditions	Min.	Typ.	Max.	Unit

## RP111x

NO.EA-241-190523

## ELECTRICAL CHARACTERISTICS

Unless otherwise noted,  $V_{IN} = \text{Set } V_{OUT} + 1.0V (V_{OUT} > 1.5)$ ,  $V_{IN} = 2.5V (V_{OUT} \leq 1.5V)$ ,  $I_{OUT} = 1\text{mA}$ ,  $C_{IN} = C_{OUT} = 1.0\mu\text{F}$ .

The specifications surrounded by   are guaranteed by Design Engineering at  $-40^\circ\text{C} \leq T_a \leq 85^\circ\text{C}$ .

### ● RP111xxx1B/D

$T_a = 25^\circ\text{C}$

Symbol	Item	Conditions	Min.	Typ.	Max.	Unit
$R_{LOW}$	Low Output Nch Tr. ON Resistance (of D version)	$V_{IN} = 4.0V$ , $V_{CE} = 0V$		60		$\Omega$

All of units are tested and specified under load conditions such that  $T_j = T_a = 25^\circ\text{C}$  except for Output Voltage Temperature Coefficient, Load Transient Response, Input Transient Response, Output Noise and Ripple Rejection.

\*) When Input Voltage is 5.5V, the total operational time must be within 500hrs.

### ● Dropout Voltage

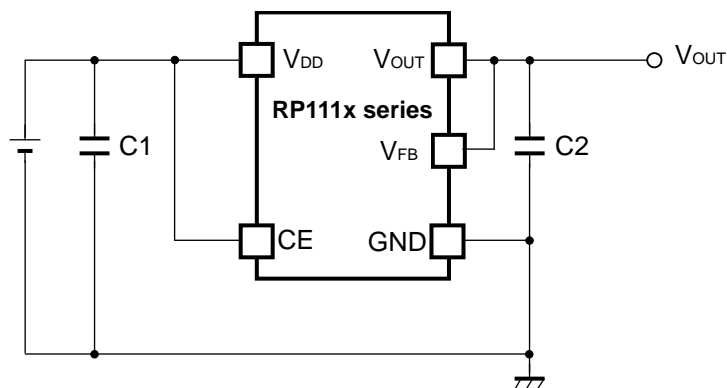

$T_a = 25^\circ\text{C}$

Output Voltage $V_{OUT}$ (V)	Dropout Voltage $V_{DIF}$ (V)		
	Condition	Typ.	Max.
$0.7 \leq V_{OUT} < 0.8$	$I_{OUT} = 500\text{mA}$	0.58	<span style="border: 1px solid black; padding: 0 2px;">0.88</span>
$0.8 \leq V_{OUT} < 0.9$		0.52	<span style="border: 1px solid black; padding: 0 2px;">0.80</span>
$0.9 \leq V_{OUT} < 1.0$		0.45	<span style="border: 1px solid black; padding: 0 2px;">0.70</span>
$1.0 \leq V_{OUT} < 1.2$		0.42	<span style="border: 1px solid black; padding: 0 2px;">0.64</span>
$1.2 \leq V_{OUT} < 1.4$		0.35	<span style="border: 1px solid black; padding: 0 2px;">0.53</span>
$1.4 \leq V_{OUT} < 1.8$		0.31	<span style="border: 1px solid black; padding: 0 2px;">0.48</span>
$1.8 \leq V_{OUT} < 2.1$		0.27	<span style="border: 1px solid black; padding: 0 2px;">0.41</span>
$2.1 \leq V_{OUT} < 2.5$		0.25	<span style="border: 1px solid black; padding: 0 2px;">0.38</span>
$2.5 \leq V_{OUT} < 3.0$		0.23	<span style="border: 1px solid black; padding: 0 2px;">0.34</span>
$3.0 \leq V_{OUT} \leq 3.6$		0.22	<span style="border: 1px solid black; padding: 0 2px;">0.32</span>

### RECOMMENDED OPERATING CONDITIONS (ELECTRICAL CHARACTERISTICS)

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

## TYPICAL APPLICATIONS

External Parts Example:

C1, C2: Ceramic Capacitor 1.0 $\mu$ F, Murata, GRM155B31A105KE15

Under normal conditions, please connect the  $V_{OUT}$  pin to the  $V_{FB}$  pin. However, in the case of adjusting the output voltage with the  $V_{FB}$  pin, please follow the "ADJUSTABLE OUTPUT VOLTAGE SETTING".

## TECHNICAL NOTES

### Phase Compensation

In these ICs, phase compensation is made for securing stable operation even if the load current is varied. For this purpose, use a 1.0 $\mu$ F or more capacitor C2.

In case of using a tantalum capacitor, the output may be unstable due to inappropriate ESR. Therefore, the full range of operating conditions for the capacitor in the application should be considered.

### PCB Layout

Make  $V_{DD}$  and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 1.0 $\mu$ F or more between  $V_{DD}$  and GND pin, and as close as possible to the pins.

Set external components, especially the output capacitor C2, as close as possible to the ICs, and make wiring as short as possible.

## ADJUSTABLE OUTPUT VOLTAGE SETTING

### Output Voltage Setting

RP111x is capable of adjusting the output voltage by using the external divider resistors. If the  $V_{FB}$  voltage fixed in the device is described as  $setV_{FB}$ , the output voltage can be set by using the following formulas.

$$I1 = I_{IC} + I2 \dots\dots\dots (1)$$

$$I2 = setV_{FB} / R2 \dots\dots\dots (2)$$

Thus,

$$I1 = I_{IC} + setV_{FB} / R2 \dots\dots\dots (3)$$

Therefore,

$$V_{OUT} = setV_{FB} + R1 \times I1 \dots\dots\dots (4)$$

Put formula (3) into formula (4), then

$$\begin{aligned} V_{OUT} &= setV_{FB} + R1 \times (I_{IC} + setV_{FB} / R2) \\ &= setV_{FB} \times (1 + R1/R2) + R1 \times I_{IC} \dots\dots\dots (5) \end{aligned}$$

In formula (5),  $R1 \times I_{IC}$  is the error-causing factor in  $V_{OUT}$ .

As for  $I_{IC}$ ,

$$I_{IC} = setV_{FB} / R_{IC} \dots\dots\dots (6)$$

Therefore, the error-causing factor  $R1 \times I_{IC}$  can be described as follows.

$$\begin{aligned} R1 \times I_{IC} &= R1 \times setV_{FB} / R_{IC} \\ &= setV_{FB} \times R1 / R_{IC} \dots\dots\dots (7) \end{aligned}$$

For better accuracy, choosing  $R1 \ll R_{IC}$  reduces this error.

Without the error-causing factor  $R1 \times I_{IC}$ , the output voltage can be calculated by the following formula.

$$V_{OUT} = setV_{FB} \times ((R1 + R2) / R2) \dots\dots\dots (8)$$

The output voltage of the externally adjustable output voltage type should be set to 3.6 V or less. The resistance of R2 should be 16 kΩ or less.

The graph below shows the relation between the  $V_{FB}$  pin voltage ( $setV_{FB}$ ) and the internal resistance of the  $V_{FB}$  pin ( $R_{IC}$ ). For example,  $R_{IC}$  will be 200 kΩ typically if  $setV_{FB}$  is 0.7 V.

**V<sub>FB</sub> Pin Voltage (setV<sub>FB</sub>) vs. Internal Resistance (R<sub>IC</sub>)**

### Typical Applications for Adjustable Output Voltage Setting

#### Phase Compensation

Similar to the Fixed Output Voltage Type, Phase compensation is made for the Adjustable Output Voltage Type for securing stable operation even if the load current is varied. For this purpose, use a 4.7μF or more capacitor C2 between V<sub>OUT</sub> pin and GND pin, and as close as possible to the pins.

#### PCB Layout

Make V<sub>DD</sub> and GND lines sufficient. If their impedance is high, noise pickup or unstable operation may result. Connect a capacitor C1 with a capacitance value as much as 1.0μF or more between V<sub>DD</sub> and GND pin, and as close as possible to the pins.

#### Transient Response

When using the Adjustable Output Voltage Type, the transient response could be affected by the external resistors. Evaluate the circuit taking the actual conditions of use into account.

## TRANSIENT RESPONSE

The RP111x Series have been improved in overall output voltage characteristics including temperature and transient response. The load transient response indicated under the Electrical Characteristics is guaranteed by design based on the condition when  $I_{OUT}$  changes from 1mA to 250mA or 250mA to 1mA. The output voltage variations under the other load conditions, the characteristic examples are shown below.

### RP111x151x

$V_{IN}=2.5V, -40^{\circ}C \leq T_a \leq 85^{\circ}C$

$C_{IN}=1.0\mu F, C_{OUT}=1.0\mu F, I_{OUT}=1mA \leftrightarrow$  Peak Output Current ( $t_r=t_f=0.5\mu s$ )

$C_{IN}=1.0\mu F, C_{OUT}=2.2\mu F, I_{OUT}=1mA \leftrightarrow$  Peak Output Current ( $t_r=t_f=0.5\mu s$ )

$C_{IN}=1.0\mu F$ ,  $C_{OUT}=1.0\mu F$ ,  $I_{OUT}=1mA \Leftrightarrow$  Peak Output Current ( $t_r=t_f=5.0\mu s$ )

**RP111x281x**

$V_{IN}=3.8V$ ,  $-40^{\circ}C \leq T_a \leq 85^{\circ}C$

$C_{IN}=1.0\mu F$ ,  $C_{OUT}=1.0\mu F$ ,  $I_{OUT}=1mA \Leftrightarrow$  Peak Output Current ( $t_r=t_f=0.5\mu s$ )

$C_{IN}=1.0\mu F$ ,  $C_{OUT}=2.2\mu F$ ,  $I_{OUT}=1mA \Leftrightarrow$  Peak Output Current ( $t_r=t_f=0.5\mu s$ )

$C_{IN}=1.0\mu F, C_{OUT}=1.0\mu F, I_{OUT}=1mA \Leftrightarrow$  Peak Output Current ( $t_r=t_f=5.0\mu s$ )

Input Transient Response has the output voltage dependency. Please refer to the characteristics examples below.

$V_{IN}$ : Set  $V_{OUT}+0.5V \Leftrightarrow$  Set  $V_{OUT}+1.5V$  ( $t_r=t_f=5.0\mu s$ ),  $V_{IN} \geq 1.4V$ ,  
 $C_{OUT}=1.0\mu F, I_{OUT}=30mA$

The graphs shown above are reference data.

For the better transient response, a capacitor with higher capacitance is recommended and the wire impedance of GND and  $V_{OUT}$  should be minimized as possible.

The transient response characteristics depend on the external parts and PCB layout. Therefore, the operating conditions for the transient response in the application should be considered and evaluation is necessary.

## Package Information

### • Power Dissipation (DFN1212-6)

Power Dissipation ( $P_D$ ) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

#### Measurement Conditions

	Standard Test Land Pattern
Environment	Mounting on Board (Wind velocity=0m/s)
Board Material	Glass cloth epoxy plastic (Double-sided)
Board Dimensions	40mm x 40mm x 1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-holes	$\phi$ 0.5mm x 28pcs

#### Measurement Result

( $T_a=25^\circ\text{C}$ ,  $T_{j\text{max}}=125^\circ\text{C}$ )

	Standard Test Land Pattern
Power Dissipation	600mW ( $T_{j\text{max}}=125^\circ\text{C}$ ) 750mW ( $T_{j\text{max}}=150^\circ\text{C}$ )
Thermal Resistance	$\theta_{ja}=(125-25^\circ\text{C})/0.6\text{W}=167^\circ\text{C/W}$ $\theta_{jc}=30^\circ\text{C/W}$

Measurement Board Pattern

IC Mount Area (Unit: mm)

Note: The above graph shows the power dissipation of the package based on  $T_{j\text{max}}=125^\circ\text{C}$  and  $T_{j\text{max}}=150^\circ\text{C}$ . Operating the IC within the shaded area in the graph might have an influence on its lifetime. Operating time must be within the time limit described in the table below.

Operating Time	Estimated Years (Operating 4 hrs/ day)
13,000 hours	9 Years

RP111L101D5	0L	1.05V

• **Power Dissipation (SOT-23-5)**

Power Dissipation ( $P_D$ ) depends on conditions of mounting on board. This specification is based on the measurement at the condition below:

(Power Dissipation (SOT-23-5) is substitution of SOT-23-6.)

Measurement Conditions

Standard Test Land Pattern	
Environment	Mounting on Board (Wind velocity=0m/s)
Board Material	Glass cloth epoxy plastic (Double-sided)
Board Dimensions	40mm x 40mm x 1.6mm
Copper Ratio	Top side: Approx. 50%, Back side: Approx. 50%
Through-holes	$\phi$ 0.5mm x 44pcs

Measurement Result

( $T_a=25^\circ\text{C}$ )

	Standard Land Pattern	Free Air
<b>Power Dissipation</b>	420mW ( $T_{jmax}=125^\circ\text{C}$ ) 525mW ( $T_{jmax}=150^\circ\text{C}$ )	250mW ( $T_{jmax}=125^\circ\text{C}$ )
Thermal Resistance	$\theta_{ja}=(125-25^\circ\text{C})/0.42\text{W}=238^\circ\text{C/W}$	400 $^\circ\text{C/W}$

**Power Dissipation**

**Measurement Board Pattern**

IC Mount Area (Unit: mm)

Note: The above graph shows the power dissipation of the package based on  $T_{jmax}=125^\circ\text{C}$  and  $T_{jmax}=150^\circ\text{C}$ . Operating the IC within the shaded area in the graph might have an influence on its lifetime. Operating time must be within the time limit described in the table below.

Operating Time	Estimated Years (Operating 4 hrs/ day)
13,000 hours	9 Years

## ESR vs. Output Current

When using these ICs, consider the following points: The relations between  $I_{OUT}$  (Output Current) and ESR of an output capacitor are shown below. The conditions when the white noise level is under  $40\mu V$  (Avg.) are marked as the hatched area in the graph.

### Measurement Conditions

Frequency Band : 10Hz to 2MHz  
 Temperature :  $-40^{\circ}C$  to  $85^{\circ}C$   
 $C1, C2$  :  $1.0\mu F$  or more

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to our sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of our company.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under our company's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact our sales or our distributor before attempting to use AOI.
11. Please contact our sales representatives should you have any questions or comments concerning the products or the technical information.
