# 1 Revision History

---

The revision history describes the changes that were implemented in the document. The changes are listed by revision, starting with the most current publication.

## 1.1 Revision 1.0

Revision 1.0 was published in November 2017. It was the first publication of this document.

## 2 Product Overview

---

The PD-IM-7608M evaluation board is developed based on PD69208M and PD69200 chipsets. PD-IM-7608M demonstrates the operation of eight 2-pair ports systems; for 4-pair systems, refer to the PD-IM-7604+4MH or PD-IM-7604+4T4H evaluation boards.

Microsemi's PD69208M Power over Ethernet (PoE) manager IC integrates power, analog, and state-of-the-art logic into a single 56-pin, plastic QFN package. The device is used in Ethernet switches and midspans to allow network devices to share power and data over the same cable. The PD69208M device is an 8-port mixed-signal and high-voltage PoE driver. Together with the PD69200 external MCU, it perform as a PSE system. Microsemi's PD69200 PoE controller is a cost-effective and pre-programmed MCU designed to implement enhanced mode.

The PD69208M and PD69200 chipset supports PoE powered device (PD) detection, power-up, and protection according to IEEE standards as well as legacy/pre-standard PD detection. It provides real-time PD protection through the following mechanisms: overload, under-load, over-voltage, over-temperature, and short-circuit, and enables operation in a standalone mode. It also executes all real-time functions as specified in IEEE802.3at and IEEE802.3af standards.

PD69208M supports supply voltages between 32 V and 57 V without additional power sources. A system that powers over 4 pairs can be implemented by combining 2 ports of PD69208M, enabling an extra feature for simple and low-cost high-power PD devices. Ongoing monitoring of system parameters for the host software is available through communication. Internal thermal protection is implemented in the chip. The PD69208M is a low power dissipation device that uses internal MOSFETs and internal 100 m  $\Omega$  sense resistors.

The PD69200 features an ESPI bus for each PD69208M. It is based on Freescale's Kinetis\_L family MKL15Z128VFM4 embedded with an ARM Cortex™-M0+ core. The PD69200 utilizes an I<sup>2</sup>C or UART interface to the host CPU. It is designed to support software field-upgradable through the communication interface.

The evaluation board, shown in the following illustration, enables PoE designers to evaluate Microsemi's PoE solution with flexibility and easy configuration. The application circuit of PD69208M and PD69200 chipset is compact in size (highlighted in the white box on board).

**Figure 1 • PD-IM-7608M Evaluation System Block Diagram**

Input supply to the board is DC and it can be fed through the  $V_{IN}$  connector (see [Electrical Characteristics \(see page 7\)](#) for the input voltage range). The auxiliary power supply (5 V and 3.3 V) for the PD69208M is generated internally and the auxiliary power supply (3.3 V) for the PD69200 MCU is generated using a 3.3 V isolated DC – DC converter. The board communicates with the host environment using UART communication, available through a USB connector (U11). For this connection, a driver for CP210x should be installed. The driver can be downloaded from <http://www.silabs.com/products/mcu/Pages/USBtoUARTBridgeVCPDrivers.aspx>. A dedicated reset push button (SW1) is provided for resetting the PoE controller. The board consists of eight 2-pair ports. The board consists of different test points (for more information about test points, see [Test Points \(see page 6\)](#)). The board also provides different LED indications (for more information on LED indications, see [LED Indication \(see page 6\)](#)).

The following image shows a top view of the evaluation board.

**Figure 2 • PD-IM-7608M Evaluation Board**

## 2.1 Evaluation System Features

The evaluation system has the following features.

- Two gangs (each contains 4 RJ45 connectors)
- Switch domain isolated from PoE domain
- Switch domain USB interface
- PoE controller manual reset
- LED status indication for all ports (LED stream)
- Requires single power source only
- 0° C to 40° C working temperature
- RoHS compliant

## 2.2 Evaluation System Interfaces and Connections

The evaluation system interfaces and connectors are listed in the following table.

**Table 1 • Evaluation Board Connectors**

Serial Number	Connector	Name	Description
1	J3, J4	RJ45 connectors	Eight RJ45 ports are connected to the powered device load
2	J1	V <sub>IN</sub> connector	The DC in (V <sub>MAIN</sub> ) connection is used to power the evaluation board
3	U11	Isolated USB	The USB communication, coming from the hosting system (U11), converted to UART and directed to the PoE controller

### 2.2.1 RJ45 Connectors

There are two dedicated RJ45 connectors; each contains four RJ45 ports, so there are eight ports in total. All the ports are 2-pair ports.

**Table 2 • RJ45 Connectors**

Pin Number (Each RJ45)	Signal Name	Description
4, 5	SPARE - Vport_Pos	PoE's positive spare port
7, 8	SPARE - Vport_Neg	PoE's negative spare port

- Manufacturer: Amphenol
- Manufacturer part number: RJHSE508104

The following image shows the RJ45 connectors.

**Figure 3 • RJ45 Connectors**

## 2.2.2 V<sub>IN</sub> Connector

The DC input ( $V_{\text{MAIN}}$ ) connection is used for powering the evaluation system. The recommended input voltage range is  $44 \text{ VDC} > V_{\text{MAIN}} > 57 \text{ V DC}$ . The input connector is rated for 5 A (refer to [Evaluation Board](#) for the  $V_{\text{IN}}$  connector).

**Table 3 • Vin Connector**

Pin Number	Signal Name	Description
1	Vmain	Main positive voltage (referenced to GND_ANALOG)
2	GND_ANALOG	Analog ground
3	GND_ANALOG	Analog ground

- Manufacturer: SWITCHCRAFT
- Manufacturer part number: RAPC722X

The polarity of the  $V_{\text{IN}}$  connector is as shown in the following illustration.

**Figure 4 • Power Supply Cable Polarity**

## 2.2.3 Isolated USB Interface

This interface supplies USB communication coming from the hosting system (U11), converted to UART communication (refer to [Evaluation Board](#) for the isolated USB connector).

**Table 4 • Isolated USB Interface**

Pin Number	Signal Name	Description
1	VBUS	Voltage supply from USB bus
2	D-	Dedicated USB signal
3	D+	Dedicated USB signal
4	GND_F	Floating ground

- Manufacturer: Samtec
- Manufacturer part number: USB-B-S-S-B-TH

## 2.3 Test Points

The following table lists the test points in the evaluation board.

**Table 5 • Test Points**

Designation	Description
TP1	Connected to power good pin, PG3
TP2	Connected to power good pin, PG2
TP3	Connected to power good pin, PG1
TP4	Connected to power good pin, PG0
TP5	PD69200 supply (3.3 V) test point
TP6	PD69200 ground test point
TP7	I <sup>2</sup> C bus serial data (SDA)
TP8	I <sup>2</sup> C bus serial clock (SCL)
h1 (+)	Evaluation board positive input ( $V_{MAIN}$ ) test point
h2 (-)	Evaluation board input ground test point

## 2.4 LED Indication

The evaluation board contains status indication LEDs, listed in the following table.

**Table 6 • LED Indication**

Designation	Description
D2	Input voltage indication
D3	PoE controller 3.3 V indication
D4	System OK indication; by default, turns on when input voltage is within operating range
D5	Interrupt indication; LED turns on when a pre-configured event is happening

Apart from these LEDs, each RJ45 connector port contains a dedicated LED (green LED), which displays the status of the particular port.

**Table 7 • Port Status Indications**

Port LED Color	Port Load Conditions	Port Voltage
Off	Inactive load or unplugged load	Power to port is disconnected, no DC voltage present on port output lines
Green	Active load is plugged in and complies with normal load conditions	Continuous nominal DC voltage is present
Green (blinks once every second)	Overload or short circuit	Power to port is disconnected, no DC voltage is present on port output lines

## 2.5 Physical Characteristics

The mechanical dimensions of the board are 180 mm × 60 mm × 16 mm (L × W × H).

## 2.6 Electrical Characteristics

The following table lists the electrical characteristics of the evaluation system.

**Table 8 • Electrical Characteristics**

Parameter	Minimum	Maximum	Units
Main DC supply $V_{MAIN}$	44	57	V

### 3 Installation and Settings

This section describes the steps required for installing and operating the PD-IM-7608M evaluation system. Take the following precautions before starting the installation.

- Ensure that the power supply of the board is turned on before the peripheral devices are turned on.
- Ensure that all the required peripherals are connected before powering the board.
- Ensure that power bank15 is set to 200 W.
- Ensure the correct polarity of the power supply cable. The polarity of the power supply cable is as shown in [Power Supply Cable Polarity \(see page 5\)](#).

#### Note

Confirm that the evaluation board is properly configured prior to starting any operation. For more information related to the software and the GUI used for enhanced mode operation, refer to *Software GUI User Guide*, catalog number 06-0027-056.

#### 3.1 Initial Configuration

The board is configured with the following matrix.

**Table 9 • Port Matrix**

Port Identification Number	Logical Port	Physical Port (ALT-A)	Physical Port (ALT-B)
0	0	0	255
1	1	1	255
2	2	2	255
3	3	3	255
4	4	4	255
5	5	5	255
6	6	6	255
7	7	7	255

## 4 Reference Documents

---

The following documents can be obtained through Microsemi customer support. To access other documents, visit our website at <http://www.microsemi.com>.

- IEEE 802.3af-2003 Standard, DTE Power via MDI
- IEEE 802.3at-2009 Standard, DTE Power via MDI
- PD69208M Datasheet (CDCA 159793)
- Application Note 211: *Designing a PD69208 48-port Enhanced PoE Systems and Layout Design Guidelines* (catalog number PD69208\_AN\_211)
- Technical Note 218: *Interfacing LED Stream circuit with PD69200* (catalog number PD69200\_TN\_218\_PoE\_LED\_Stream\_Interface)
- PD69200 Serial Communication Protocol User Guide (catalog number PD\_69200\_UG\_COMM\_PROT)
- Software GUI User Guide (catalog number 06-0027-056)

## 5 Ordering Information

---

The following table lists the ordering information for the PD-IM-7608M evaluation system.

**Table 10 • Evaluation Board Ordering Information**

Ordering Number	Description
PD-IM-7608M	8-port PD69208M-based enhanced evaluation board with LED stream. RoHS compliant.

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for aerospace & defense, communications, data center and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; enterprise storage and communication solutions; security technologies and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, California, and has approximately 4,800 employees globally. Learn more at [www.microsemi.com](http://www.microsemi.com).
