

CJ6386 Series

■ INTRODUCTION

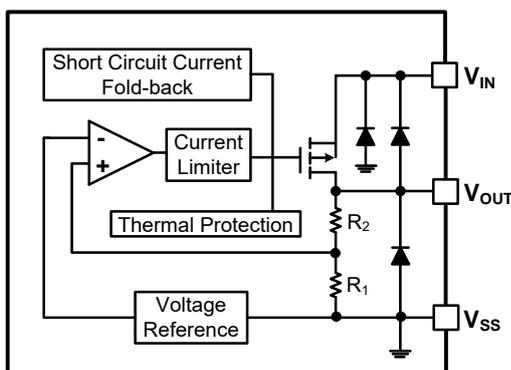

CJ6386 series is a group of positive voltage regulator made by CMOS technology. It has the characteristics of low power consumption and low voltage. Even if the difference between input voltage and output voltage is very small, it can still provide large output current. CJ6386 series can provide 250 mA output current, allowing input voltage up to 45V. Therefore, this series of products are very suitable for battery powered devices, such as RF applications and other systems requiring quiet voltage sources.

CJ6386 series provides: SOT-23-3L\5L, SOT-89-3L, SOT-223 and TO-92, which conform to the ROHS environmental protection standards.

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltages are with respect to network ground terminal.

(3) This IC includes over temperature protection that is intended to protect the device during momentary overload. Junction temperature will exceed 125°C when over temperature protection is active. Continuous operation above the specified maximum operating junction temperature may impair device reliability.
