

MC10160

12-Bit Parity Generator-Checker

The MC10160 consists of nine Exclusive-OR gates in a single package, internally connected to provide odd parity checking or generation. Output goes high when an odd number of inputs are high. Unconnected inputs are pulled to low logic levels allowing parity detection and generation for less than 12 bits.

- $P_D = 320 \text{ mW typ/pkg (No Load)}$
- $t_{pd} = 5.0 \text{ ns typ}$
- $t_r, t_f = 2.0 \text{ ns typ (20\%–80\%)}$

LOGIC DIAGRAM

DIP PIN ASSIGNMENT

Pin assignment is for Dual-in-Line Package.
For PLCC pin assignment, see the Pin Conversion Tables on page 18.

INPUT	OUTPUT
Sum of High Level Inputs	Pin 2
Even	Low
Odd	High

1. Pins 3, 6, 7, 11, 12, 15 are similar. Pins 4, 5, 9, 10, 13, 14 are similar.

Each MECL 10,000 series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50-ohm resistor to -2.0 volts. Test procedures are shown for only one gate. The other gates are tested in the same manner.
