HIGH-SLEW-RATE, SINGLE-SUPPLY OPERATIONAL AMPLIFIERS**

D3825, MARCH 1991 - REVISED JULY 1991

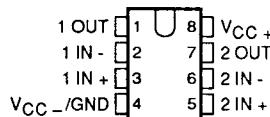

available features

- Wide Gain-Bandwidth Product . . . 4.5 MHz
- High Slew Rate . . . 13 V/ μ s
- Fast Settling Time . . . 1.1 μ s to 0.1 %
- Wide-Range Single-Supply Operation
4 V to 44 V
- Wide Input Common-Mode Range
Includes Ground ($V_{CC_}$)
- Low Total Harmonic Distortion . . . 0.02 %
- Low Input Offset Voltage . . . 3 mV Max
(A Suffix)
- Large Output Voltage Swing
— 14.7 V to 14 V (With \pm 15-V Supplies)
- Large Capacitance Drive Capability
0 to 10,000 pF
- Excellent Phase Margin . . . 60°
- Excellent Gain Margin . . . 12 dB
- Output Short-Circuit Protection

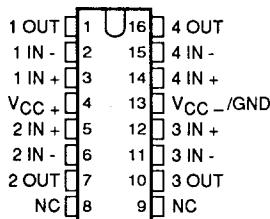

D-8 OR P PACKAGE
(SINGLE, TOP VIEW)

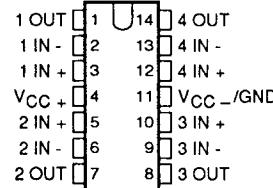

D-8 OR P PACKAGE
(DUAL, TOP VIEW)

DW PACKAGE
(QUAD, TOP VIEW)

N PACKAGE
(QUAD, TOP VIEW)

NC – No internal connection

HIGH-SLEW-RATE, SINGLE-SUPPLY OPERATIONAL AMPLIFIERS

description

Quality, low cost, bipolar fabrication with innovative design concepts are employed for the TL33071/2/4, TL34071/2/4, and TL35071/2/4 series of monolithic operational amplifiers. This series of operational amplifiers offer 4.5 MHz of gain bandwidth product, 13 V/ μ s slew rate and fast settling time without the use of JFET device technology. Although this series can be operated from split supplies, it is particularly suited for single-supply operation, since the common-mode input voltage range includes ground potential (V_{CC-}). With a Darlington input stage, this series exhibits high input resistance, low input offset voltage, and high gain. The all-NPN output stage, characterized by no dead-band crossover distortion and large output voltage swing, provides high-capacitance drive capability, excellent phase and gain margins, low open-loop high-frequency output impedance, and symmetrical source/sink ac frequency response.

The TL33071/2/4, TL34071/1/4, and TL35071/2/4 series of devices are available in standard or prime performance (A-Suffix) grades and are specified over the commercial (0°C to 70°C), industrial/vehicular (-40°C to 105°C) or military (-55°C to 125°C) temperature ranges. These low-cost amplifiers are available in single, dual and quad configurations and are pin-compatible with the (low-cost) MC33071/2/4, MC34071/2/4, and MC35071/2/4 series of amplifiers. Packaging options include standard plastic DIP and SO packages.

HIGH-SLEW-RATE, SINGLE-SUPPLY OPERATIONAL AMPLIFIERS**

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

Supply voltage, V_{CC+} (see Note 1)	22 V
Supply voltage, V_{CC-}	-22 V
Differential input voltage (see Note 2)	± 44 V
Input voltage range, V_I (any input)	$V_{CC\pm}$
Input current, I_I (each input)	± 1 mA
Output current, I_O	± 80 mA
Total current into V_{CC+} terminal	80 mA
Total current out of V_{CC-} terminal	80 mA
Duration of short-circuit current at (or below) 25°C (see Note 3)	unlimited
Continuous total dissipation	See Dissipation Rating Table
Operating free-air temperature range, T_A : TL3307 __	-40°C to 105°C
TL3407 __	0°C to 70°C
TL3507 __	-55°C to 125°C
Storage temperature range	-65°C to 150°C
Lead temperature 1.6 mm (1/16 inch) from case for 10 seconds: D, DW, N, or P package	260°C

- NOTES: 1. All voltage values, except differential voltages, are with respect to the midpoint between V_{CC+} and V_{CC-} .
 2. Differential voltages are at the noninverting input with respect to the inverting input. Excessive current will flow if input is brought below $V_{CC-} - 0.3$ V.
 3. The output may be shorted to either supply. Temperature and/or supply voltages must be limited to ensure that the maximum dissipation rating is not exceeded.
