

Description

The TP10 series are CMOS dual, and quad RRIO op-amps with low offset, low power and stable high frequency response. with 6MHz bandwidth, 4.5V/µs slew rate and low distortion while drawing only 600µA of quiescent current per amplifier. The input common-mode voltage range extends 300mV beyond V₋ and V₊, and the outputs swing rail-to-rail. The TP10 family can be used as plug-in replacements for many commercially available op-amps to reduce power and improve input/output range and performance.

The combination of features makes the TP10 ideal choices for motor control and portable audio amplification, sound ports, and other consumer Audio. The TP10 Op-amp is very stable, and it is capable of driving heavy capacitive loads such as those found in LCDs. The ability to swing rail-to-rail at the inputs and outputs enables designers to buffer CMOS DACs, ASICs, or other wide output swing devices in single-supply systems.

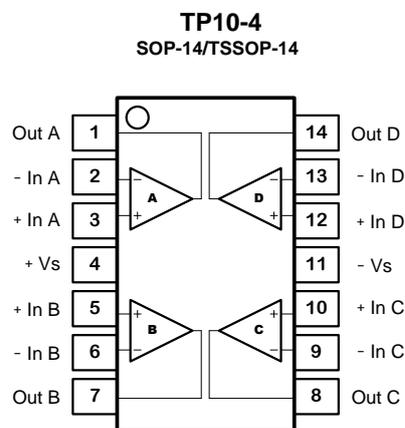

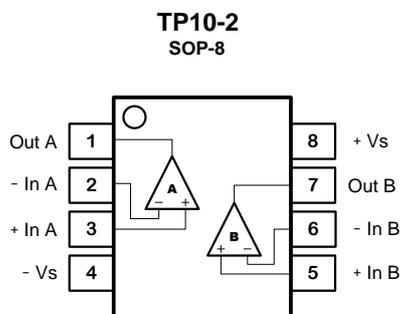

Features

- Supply Voltage: 2.7V to 5.5V
- Low Supply Current: 600µA per channel
- Rail to Rail Input and Output
- Bandwidth: 6 MHz
- Slew Rate: 4.5V/µs
- Excellent EMI Suppress Performance
- Offset Voltage: ±3mV Maximum
- Offset Voltage Temperature Drift: 1 µV/°C
- Low Noise: 19 nV/√Hz at 1kHz
- High Output Capability: 100mA
- -40°C to 125°C Operation Temperature Range

Applications

- E-Bike
- Motor Control
- Portable Audio

Absolute Maximum Ratings

Parameters	Rating
Supply Voltage, (+V _S)– (-V _S)	7 V
Input Voltage	(-V _S) – 0.3 to (+V _S) + 0.3
Differential Input Voltage	±7V
Input Current: +IN, –IN ^{Note 2}	±10mA
Output Short-Circuit Duration ^{Note 3}	Infinite
Maximum Junction Temperature	150°C
Operating Temperature Range	–40 to 125°C
Storage Temperature Range	–65 to 150°C
Lead Temperature (Soldering, 10 sec)	260°C

Note 1: Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

Note 2: The inputs are protected by ESD protection diodes to each power supply. If the input extends more than 300mV beyond the power supply, the input current should be limited to less than 10mA.

Note 3: A heat sink may be required to keep the junction temperature below the absolute maximum. This depends on the power supply voltage and how many amplifiers are shorted. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.
