## Low Power, High Accuracy, High PSRR LDO Regulators

### Description

The AT6230 series are high accuracy, CMOS LDO Voltage Regulators, offering low power, high ripple rejection ratio and low dropout. AT6230 series is ideal for today's cutting edge mobile phone. Internally AT6230 includes a reference voltage source, error amplifiers, driver transistors, current limiters and phase compensators. AT6230's current limiters' foldback circuit also operates as a short protect for the output current limiter and the output pin. The AT6230 series is also fully compatible with low ESR ceramic capacitors, reducing cost and improving output stability. The high level of output stability is maintained even during frequent load fluctuations, due to excellent transient response performance and high PSRR achieved across a broad range of frequencies. The CE function allows the output of regulator to be turned off, resulting in greatly reduced power consumption.

### NOTES:

1. VOUT(T) : Specified Output Voltage
2. VOUT(E) : Effective Output Voltage ( ie. The output voltage when “VOUT(T)+1.0V” is provided at the Vin pin while maintaining a certain Iout value.)
3. VDIF:  $VIN - VOUT(E)$ '  
VIN1: The input voltage when VOUT(E)' appears as input voltage is gradually decreased.  
 $VOUT(E)'$  = A voltage equal to 98% of the output voltage whenever an amply stabilized Iout {VOUT(T)+1.0V} is input.
- 4.guaranteed by design.
