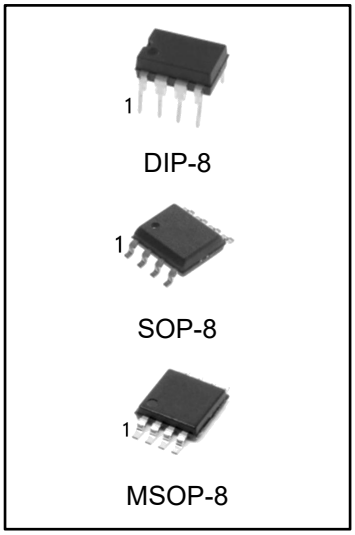
Low Voltage Reference

Features

- Output Voltage: 2.5 V±25 mV
- Input Voltage Range: 4.5 V to 40 V
- Quiescent Current: 1.2 mA Typical
- Output Current: 10 mA
- Temperature Coefficient: 10 ppm/°C Typical
- Guaranteed Temperature Drift Specification
- Equivalent to AD580
- Standard DIP-8, SOP-8 and MSOP-8 Package



Ordering Information

General Description

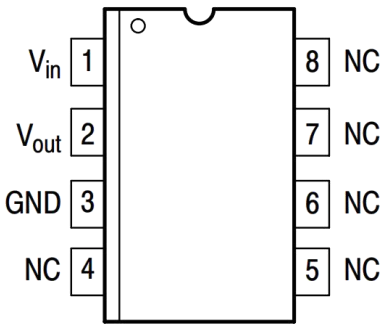
A precision band−gap voltage reference designed for critical instrumentation and D/A converter applications. This unit is designed to work with D/A converters, up to 12 bits in accuracy, or as a reference for power supply applications.

Typical Applications

- Voltage Reference for 8 to 12 Bit D/A Converters
- Low TC Zener Replacement
- High Stability Current Reference
- Voltmeter System Reference
- Pb−Free Package is Available

Pin Connections

DIP-8/SOP-8/MSOP-8



Maximum Ratings (TA = 25℃, unless otherwise noted.)

Rating		Symbol	Value	Unit
Input Voltage		V_I	40	V
Storage Temperature		T_{stg}	−65 to 150	℃
Junction Temperature		T_J	+175	℃
Operating Ambient Temperature Range	MC1403B MC1403	T_A	−40 to +85 0 to +70	℃ ℃
Lead Temperature (Soldering, 10 seconds)		TL	245	℃

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

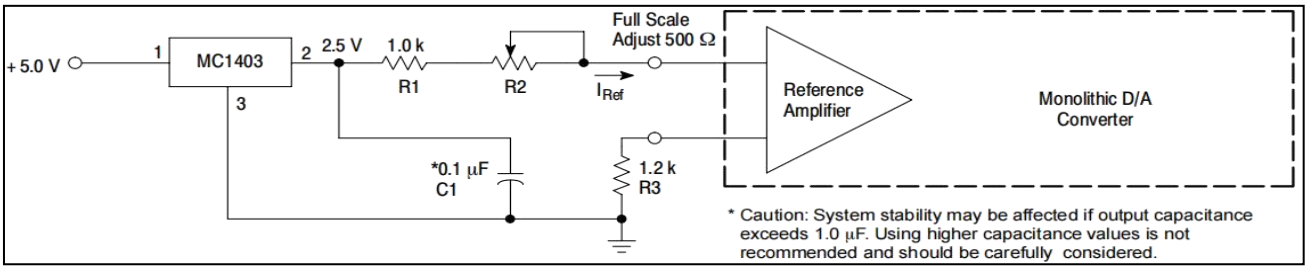


Figure 1. A Reference for Monolithic D/A Converters

Providing the Reference Current
for ON Semiconductor Monolithic D/A Converters

The MC1403 makes an ideal reference for many mono- lithic D/A converters, requiring a stable current reference of nominally 2.0 mA. This can be easily obtained from the MC1403 with the addition of a series resistor, R1. A variable resistor, R2, is recommended to provide means for full− scale adjust on the D/A converter.

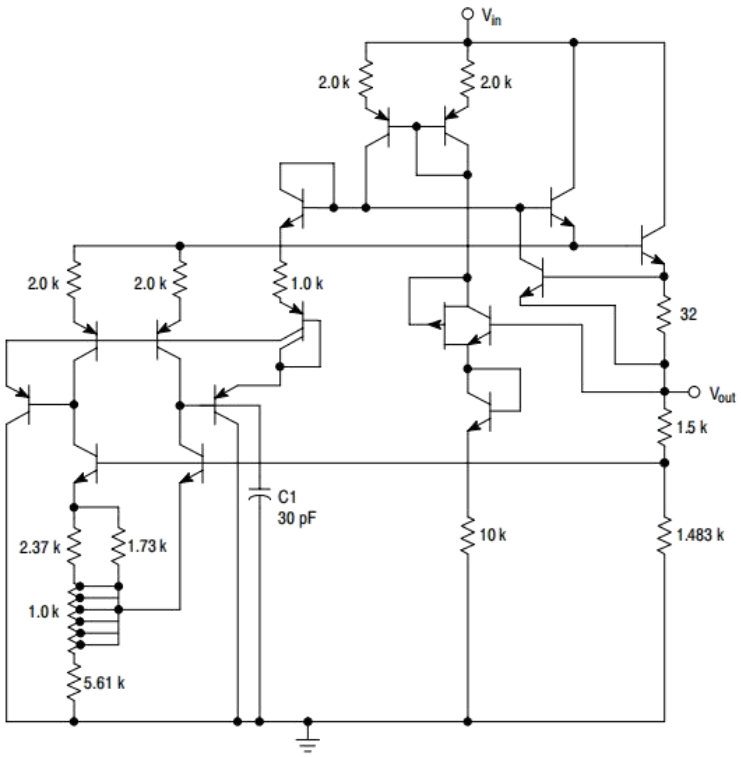
The resistor R3 improves temperature performance by matching the impedance on both inputs of the D/A reference amplifier. The capacitor decouples any noise present on the reference line. It is essential if the D/A converter is located any appreciable distance from the reference.

A single MC1403 reference can provide the required current input for up to five of the monolithic D/A converters.

Electrical Characteristics (Vin = 15 V, TA = 25℃, unless otherwise noted.)

Characteristic	Symbol	Min	Typ	Max	Unit
Output Voltage(I_O = 0 mA)	V_{out}	2.475	2.5	2.525	V
Temperature Coefficient of Output Voltage*MC1403	$\Delta V_O/\Delta T$	—	10	40	ppm/℃
Output Voltage Change* (Over specified temperature range) MC1403 0 to +70℃ MC1403B −40 to +85℃	ΔV_O	 — —	 — —	 7.0 12.5	mV
Line Regulation (I_O = 0 mA) (15 V≤V_I≤40 V) (4.5 V≤V_I≤15 V)	Reg_{line}	— —	1.2 0.6	4.5 3.0	mV
Load Regulation (0 mA < I_O < 10 mA)	Reg_{load}	—	—	10	mV
Quiescent Current (I_O = 0 mA)	I_Q	—	1.2	1.5	mA

*Guaranteed but not tested.



This device contains 15 active transistors.

3−1/2−Digit Voltmeter − Common Anode Displays, Flashing Overrange

An example of a 3−1/2−digit voltmeter using the MC14433 is shown in the circuit diagram of Figure 8. The reference voltage for the system uses an MC1403 2.5 V reference IC. The full scale potentiometer can calibrate for a full scale of 199.9 mV or 1.999 V. When switching from 2.0 V to 200 mV operation, RI is also changed, as shown on the diagram.

When using RC equal to 300 kΩ, the clock frequency for the system is about 66 kHz. The resulting conversion time is approximately 250 ms.

When the input is overrange, the display flashes on and off. The flashing rate is one−half the conversion rate. This is done by dividing the EOC pulse rate by 2 with 1/2 MC14013B flip−flop and blanking the display using the blanking input of the MC14543B.

The display uses an LED display with common anode digit lines driven with an MC14543B decoder and an MC1413 LED driver. The MC1413 contains 7 Darlington transistor drivers and resistors to drive the segments of the display. The digit drive is provided by four MPS−A12 Darlington transistors operating in an emitter−follower configuration. The MC14543B, MC14013B and LED displays are referenced to VEE via Pin 13 of the MC14433.This places the full power supply voltage across the display.The current for the display may be adjusted by the value of the segment resistors shown as 150 Ω in Figure 8.

IMPORTANT STATEMENT:

Huaguan Semiconductor reserves the right to change its products and services without notice. Before ordering, the customer shall obtain the latest relevant information and verify whether the information is up to date and complete. Huaguan Semiconductor does not assume any responsibility or obligation for the altered documents.

Customers are responsible for complying with safety standards and taking safety measures when using Huaguan Semiconductor products for system design and machine manufacturing. You will bear all the following responsibilities: Select the appropriate Huaguan Semiconductor products for your application; Design, validate and test your application; Ensure that your application meets the appropriate standards and any other safety,security or other requirements. To avoid the occurrence of potential risks that may lead to personal injury or property loss.

Huaguan Semiconductor products have not been approved for applications in life support, military, aerospace and other fields, and Huaguan Semiconductor will not bear the consequences caused by the application of products in these fields. All problems, responsibilities and losses arising from the user's use beyond the applicable area of the product shall be borne by the user and have nothing to do with Huaguan Semiconductor, and the user shall not claim any compensation liability against Huaguan Semiconductor by the terms of this Agreement.

The technical and reliability data (including data sheets), design resources (including reference designs), application or other design suggestions, network tools, safety information and other resources provided for the performance of semiconductor products produced by Huaguan Semiconductor are not guaranteed to be free from defects and no warranty, express or implied, is made. The use of testing and other quality control technologies is limited to the quality assurance scope of Huaguan Semiconductor. Not all parameters of each device need to be tested.

The documentation of Huaguan Semiconductor authorizes you to use these resources only for developing the application of the product described in this document. You have no right to use any other Huaguan Semiconductor intellectual property rights or any third party intellectual property rights. It is strictly forbidden to make other copies or displays of these resources. You should fully compensate Huaguan Semiconductor and its agents for any claims, damages, costs, losses and debts caused by the use of these resources. Huaguan Semiconductor accepts no liability for any loss or damage caused by infringement.
