

DUAL DIFFERENTIAL COMPARATORS

DESCRIPTION

The LM293 consists of two independent voltage comparators. These were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. The outputs can be connected to other open-collector outputs to achieve wired-AND relationships.

FEATURES

- Wide supply voltage range
- Low supply current drain independent of the supply voltage.
- Low input biasing current
- Low input offset current
- Low input offset voltage
- Input common-mode voltage range includes GND
- Differential input voltage range equal to the power supply voltage
- Low output saturation voltage
- Output voltage compatible with TTL, MOS and CMOS logic

^{*}Full range (MIN to MAX), for the LM293 is -40°C to 125°C. All characteristics are measured with zero common-mode input voltage unless otherwise specified.

SWITCHING CHARACTERISTICS, VCC=5V, TA=25°C

| PARAMETER | TEST (| MIN | TYP | MAX | UNIT | |

^{*}CL includes probe and jig capacitance.

NOTE 1: The response time specified is the interval between the input step function and the instant, when the output crosses 1.4V.

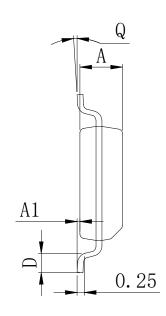

^{**}The voltage at either input or common-mode should not be allowed to go negative by more than 0.3V. The upper end of the common-mode voltage range is VCC-1.5V, but either or both inputs can go to 30V without damage.
