

Spread Spectrum Clock Generator

Features

- 4 to 32 MHz input frequency range
- 4 to 128 MHz output frequency range
- Accepts clock, crystal, and resonator inputs
- 1x, 2x, and 4x frequency multiplication:
 - CY25811: 1x; CY25812: 2x; CY25814: 4x
- Center and Down Spread modulation
- Low power dissipation:
 - 3.3V = 52 mW - typ at 6 MHz
 - 3.3V = 60 mW - typ at 12 MHz
 - 3.3V = 72 mW - typ at 24 MHz
- Low cycle-to-cycle jitter:
 - 8 MHz = 480 ps-max
 - 16 MHz = 400 ps-max
 - 32 MHz = 450 ps-max
- Available in 8-pin SOIC and TSSOP packages
- Commercial and industrial temperature ranges

Applications

- Printers and MFPs
- LCD panels
- Digital copiers
- PDAs
- CD-ROM, VCD, and DVD
- Networking, LAN, and WAN
- Scanners
- Modems
- Embedded digital systems

Benefits

- Peak EMI reduction by 8 to 16 dB
- Fast time to market
- Cost reduction

Pin Definitions

Pin No.	Name	Type	Description
1	XIN/CLKIN	Input	Crystal, Ceramic Resonator or Clock Input Pin.
2	VSS	Power	Power Supply Ground.
3	S1	Input	Digital Spread% Control Pin. 3-Level input (H-M-L). Default = M.
4	S0	Input	Digital Spread% Control Pin. 3-Level input (H-M-L). Default = M.
5	SSCLK	Output	Spread Spectrum Output Clock.
6	FRSEL	Input	Input Frequency Range Selection Digital Control Input. 3-Level input (H-M-L). Default = M.
7	VDD	Power	Positive Power Supply.
8	XOUT	Output	Crystal or Ceramic Resonator Output Pin.

Functional Overview

The CY25811/12/14 products are Spread Spectrum Clock Generator (SSCG) ICs used for the purpose of reducing electromagnetic interference (EMI) found in today's high-speed digital electronic systems.

The devices use a Cypress proprietary phase-locked loop (PLL) and Spread Spectrum Clock (SSC) technology to synthesize and modulate the frequency of the input clock. By frequency modulating the clock, the measured EMI at the fundamental and harmonic frequencies is greatly reduced.

This reduction in radiated energy significantly reduces the cost of complying with regulatory agency requirements and improves time to market without degrading system performance.

The input frequency range is 4 to 32 MHz and accepts clock, crystal and ceramic resonator inputs. The output clock can be selected to produce 1x, 2x, or 4x multiplication of the input frequency with Spread Spectrum Frequency Modulation.

The use of 2x or 4x frequency multiplication eliminates the need for higher order crystals and enables you to generate up to 128 MHz Spread Spectrum Clock (SSC) by using only first-order crystals. This reduces the cost while improving the system clock accuracy, performance, and complexity.

Select the Center Spread or Down Spread frequency modulation based on four discrete values of Spread % for each Spread mode with the option of a Non Spread mode for system test and verification purposes.

The CY25811/12/14 products are available in an 8-pin SOIC (150 mils) package with a commercial operating temperature range of 0 °C to 70 °C and industrial temperature range of -40 °C to 85 °C. Refer to [CY25568](#) for multiple clock output options such as modulated and unmodulated clock outputs or power down function.

Input Frequency Range and Selection

The CY25811/12/14 input frequency range is 4 to 32 MHz. This range is divided into three segments and controlled by a 3-level FRSEL pin as given in [Table 1](#).

Table 1. Input Frequency Selection

FRSEL	Input Frequency Range
0	4.0 to 8.0 MHz
1	8.0 to 16.0 MHz
M	16.0 to 32.0 MHz

Spread Percentage Selection

The CY25811/12/14 SSCG products provide Center Spread, Down Spread, and No Spread functions. The amount of Spread percentage is selected using 3-level. S0 and S1 digital inputs and Spread percent values are given in [Table 2](#).

Table 2. Spread Percent Selection

XIN (MHz)	FRSEL	S1 = 0 S0 = 0	S1 = 0 S0 = M	S1 = 0 S0 = 1	S1 = M S0 = 0	S1 = 1 S0 = 1	S1 = 1 S0 = 0	S1 = M S0 = 1	S1 = 1 S0 = M	S1 = M S0 = M
		Center (%)	Center (%)	Center (%)	Center (%)	Down (%)	Down (%)	Down (%)	Down (%)	No Spread
4–5	0	±1.4	±1.2	±0.6	±0.5	-3.0	-2.2	-1.9	-0.7	0
5–6	0	±1.3	±1.1	±0.5	±0.4	-2.7	-1.9	-1.7	-0.6	0

20–24	M	±1.3	±1.1	±0.5	±0.4	-2.7	-1.9	-1.7	-0.6	0
24–28	M	±1.2	±0.9	±0.5	±0.4	-2.5	-1.8	-1.5	-0.6	0
28–32	M	±1.1	±0.9	±0.4	±0.3	-2.3	-1.7	-1.4	-0.5	0

3-Level Digital Inputs

S0, S1, and FRSEL digital inputs are designed to sense three different logic levels designated as High “1”, Low “0”, and Middle “M”. With this 3-Level digital input logic, the 3-Level Logic detects nine different logic states.

S0, S1, and FRSEL pins include an on chip 20K (10K and 10K) resistor divider. No external application resistors are needed to implement the 3-level logic levels as shown here:

Logic Level “0”: 3-Level logic pin connected to GND.

Logic Level “M”: 3-Level logic pin left floating (no connection).

Logic Level “1”: 3-Level logic pin connected to V_{DD}.

[Figure 2](#) illustrates how to implement 3-Level Logic.

Figure 2. 3-Level Logic

Modulation Rate

SSCGs use frequency modulation (FM) to distribute energy over a specific band of frequencies. The maximum frequency of the clock (f_{max}) and minimum frequency of the clock (f_{min}) determine this band of frequencies. The time required to transition from f_{min} to f_{max} and back to f_{min} is the period of the Modulation Rate. The Modulation Rate of SSCG clocks are generally referred to in terms of frequency, or:

$$f_{mod} = 1/T_{mod}$$

The input clock frequency, f_{in} , and the internal divider determine the Modulation Rate.

In CY25811/12/14 devices, the (Spread Spectrum) modulation rate, f_{mod} , is given by the following formula:

$$f_{mod} = f_{in}/DR$$

Here f_{mod} is the Modulation Rate, f_{in} is the Input Frequency, and DR is the Divider Ratio as given in [Table 3](#). Note that Input Frequency Range is set by FRSEL.

Table 3. Modulation Rate Divider Ratios

FRSEL	Input Frequency Range (MHz)	Divider Ratio (DR)
0	4 to 8	128
1	8 to 16	256
M	16 to 32	512

Input and Output Frequency Selection

The relationship between input frequency and output frequency in device selection and FRSEL setting is given in [Table 4](#). As shown, the input frequency range is selected by FRSEL and is the same for CY25811, CY25812, and CY25814. The selection of CY25811 (1x), CY25812 (2x), or CY25814 (4x) determines the frequency multiplication at the output (SSCLK, Pin 5) with respect to input frequency (XIN, Pin-1).

Table 4. Input and Output Frequency Selection

Input Frequency Range (MHz)	FRSEL	Product	Multiplication	Output Frequency Range (MHz)
4 to 8	0	CY25811	1x	4 to 8
8 to 16	1	CY25811	1x	8 to 16
16 to 32	M	CY25811	1x	16 to 32
4 to 8	0	CY25812	2x	8 to 16
8 to 16	1	CY25812	2x	16 to 32
16 to 32	M	CY25812	2x	32 to 64
4 to 8	0	CY25814	4x	16 to 32
8 to 16	1	CY25814	4x	32 to 64
16 to 32	M	CY25814	4x	64 to 128

Absolute Maximum Conditions

Both Commercial and Industrial Grades

Parameter ^[1, 2]	Description	Condition	Min	Max	Unit

Characteristic Curves

The following curves demonstrate the characteristic behavior of CY25811/12/14 when tested over a number of environmental and application specific parameters. These are typical performance curves and are not meant to replace any parameter specified in DC and AC Specification tables.

Figure 3. Characteristic Curves

Jitter vs. Input Frequency (No Load)

IDD vs. Frequency (FRSEL = 0, 1, M)

Bandwidth % vs. VDD

SSCG Profiles

CY25811/12/14 SSCG products use a non-linear “optimized” frequency profile as shown in Figure 4. The use of Cypress proprietary “optimized” frequency profile maintains flat energy distribution over the fundamental and higher order harmonics. This results in additional EMI reduction in electronic systems.

Figure 4. Spread Spectrum Profiles (Frequency versus Time)

Xin = 6.0 MHz SSCLK1 = 6.0 MHz
 S1, S0 = 0

This document, including any software or firmware included or referenced in this document ("Software"), is owned by Cypress under the intellectual property laws and treaties of the United States and other countries worldwide. Cypress reserves all rights under such laws and treaties and does not, except as specifically stated in this paragraph, grant any license under its patents, copyrights, trademarks, or other intellectual property rights. If the Software is not accompanied by a license agreement and you do not otherwise have a written agreement with Cypress governing the use of the Software, then Cypress hereby grants you a personal, non-exclusive, nontransferable license (without the right to sublicense) (1) under its copyright rights in the Software (a) for Software provided in source code form, to modify and reproduce the Software solely for use with Cypress hardware products, only internally within your organization, and (b) to distribute the Software in binary code form externally to end users (either directly or indirectly through resellers and distributors), solely for use on Cypress hardware product units, and (2) under those claims of Cypress's patents that are infringed by the Software (as provided by Cypress, unmodified) to make, use, distribute, and import the Software solely for use with Cypress hardware products. Any other use, reproduction, modification, translation, or compilation of the Software is prohibited.

TO THE EXTENT PERMITTED BY APPLICABLE LAW, CYPRESS MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS DOCUMENT OR ANY SOFTWARE OR ACCOMPANYING HARDWARE, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. To the extent permitted by applicable law, Cypress reserves the right to make changes to this document without further notice. Cypress does not assume any liability arising out of the application or use of any product or circuit described in this document. Any information provided in this document, including any sample design information or programming code, is provided only for reference purposes. It is the responsibility of the user of this document to properly design, program, and test the functionality and safety of any application made of this information and any resulting product. Cypress products are not designed, intended, or authorized for use as critical components in systems designed or intended for the operation of weapons, weapons systems, nuclear installations, life-support devices or systems, other medical devices or systems (including resuscitation equipment and surgical implants), pollution control or hazardous substances management, or other uses where the failure of the device or system could cause personal injury, death, or property damage ("Unintended Uses"). A critical component is any component of a device or system whose failure to perform can be reasonably expected to cause the failure of the device or system, or to affect its safety or effectiveness. Cypress is not liable, in whole or in part, and you shall and hereby do release Cypress from any claim, damage, or other liability arising from or related to all Unintended Uses of Cypress products. You shall indemnify and hold Cypress harmless from and against all claims, costs, damages, and other liabilities, including claims for personal injury or death, arising from or related to any Unintended Uses of Cypress products.
