

SxX8BBS Series

EV Series 0.8 Amp Sensitive SCRs

HF **RoHS****Main Features**

Symbol	Value	Unit
$I_{T(RMS)}$	0.8	A
V_{DRM}/V_{RRM}	600	V
I_{GT}	200	μ A

Description

This new sensitive SCR component series offers 600V V_{DRM} and 0.8A $I_{T(RMS)}$ capability in the smallest package size in the industry, SOT23. It is specifically designed for GFCI (Ground Fault Circuit Interrupter) applications. All SCRs junctions are glass-passivated to ensure long term reliability and parametric stability.

Features

- Very compact SOT23 SMT package
- Surge current capability up to 12A @ 60Hz
- Blocking voltage (V_{DRM}/V_{RRM}) capability - up to 600V
- High dv/dt noise immunity
- Improved turn-off time (t_q) < 25 μ sec
- Sensitive gate for direct microprocessor interface
- RoHS compliant and Halogen-Free

Applications

The SxX8BBS series is specifically designed for GFCI (Ground Fault Circuit Interrupter) and applications.

Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
