### Features

- This Circuit is Processed in Accordance to Mil-Std-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- High Slew Rate (HA-2510/883) ..... 50V/ $\mu$ s Min  
65V/ $\mu$ s Typ
- Wide Power Bandwidth (HA-2510/883) .... 750kHz Min
- Low Offset Current (HA-2510/883) ..... 25nA Min  
10nA Typ
- High Input Impedance (HA-2510/883) ... 50M $\Omega$  Min  
100M $\Omega$  Typ
- Wide Small Signal Bandwidth ..... 12MHz Typ
- Fast Settling Time (0.1% of 10V Step) .... 250ns Typ
- Low Quiescent Supply Current ..... 6mA MAX
- Internally Compensated For Unity Gain Stability

### Applications

- Data Acquisition Systems
- R. F. Amplifiers
- Video Amplifiers
- Signal Generators
- Pulse Amplification

### Description

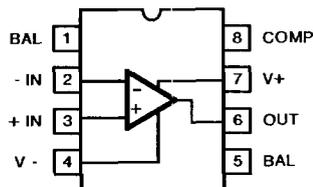

The HA-2510/883 and HA-2512/883 are a series of high performance operational amplifiers which set the standards for maximum slew rate and wide bandwidth operation in moderately powered, internally compensated, monolithic devices. In addition to excellent dynamic characteristics, these dielectrically isolated amplifiers also offer low offset current and high input impedance.

The  $\pm 50$ V/ $\mu$ s minimum slew rate and fast settling time of the HA-2510/883 are ideally suited for high speed D/A, A/D, and pulse amplification designs. The HA-2510/883 and the HA-2512/883's superior bandwidth and 750KHz (HA-2510/883) minimum full power bandwidth are extremely useful in R. F. and video applications. To insure compliance with slew rate and transient response specifications, all devices are 100% tested for A. C. performance characteristics over full temperature limits. To improve signal conditioning accuracy, the HA-2510/883 provides a maximum offset current of 25nA and a minimum input impedance of 50M $\Omega$ , both at +25 $^{\circ}$ C, as well as offset voltage trim capability.

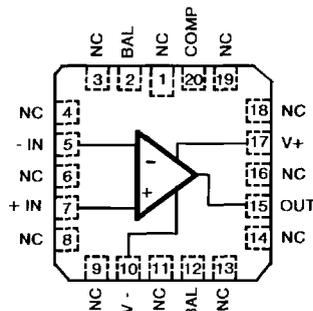

The HA-2510/883 and HA-2512/883 are available as MIL-STD-883 compliant devices screened to Class B level. These devices are sensitive to electrostatic discharge and are in microcircuit group number 49 (see MIL-M-38510, Appendix E). The HA-2510/883 and HA-2512/883 have guaranteed operation over the military temperature range from -55 $^{\circ}$ C to +125 $^{\circ}$ C and are available in TO-99, 8 pin Metal Can and Ceramic Mini-DIP packages. The HA-2512/883 is also available in a 20 pin LCC package.

## Absolute Maximum Ratings

|  |                 |
|--|-----------------|
| Voltage Between V+ and V- Terminals    | 40V             |
| Differential Input Voltage             | 15V             |
| Voltage at Either Input Terminal       | V+ to V-        |
| Peak Output Current                    | 50mA            |
| Junction Temperature (T <sub>J</sub> ) | +175°C          |
| Storage Temperature Range              | -65°C to +150°C |
| ESD Rating                             | < 2000V         |
| Lead Temperature (Soldering 10 sec)    | 275°C           |

*CAUTION: Absolute maximum ratings are limiting values, applied individually beyond which the serviceability of the circuit may be impaired. Functional operability under any of these conditions is not necessarily implied.*

NOTES: 1. Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.

2. Full Power Bandwidth guarantee based on Slew Rate measurement using  $FPBW = \text{Slew Rate} / (2\pi V_{PEAK})$ .
3. Quiescent Power Consumption based upon Quiescent Supply Current test maximum. (No load on outputs.)
4. Offset adjustment range is  $[ V_{IO(\text{Measured})} \pm 1\text{mV} ]$  minimum referred to output. This test is for functionality only to assure adjustment through 0V.
