

HA-2620, HA-2622, HA-2625

**100MHz, High Input Impedance, Very Wideband,
Uncompensated Operational Amplifiers**

November 1996

Features

- Gain Bandwidth Product ($A_v \geq 5$) 100MHz
- High Input Impedance 500M Ω
- Low Input Bias Current 1nA
- Low Input Offset Current 1nA
- Low Input Offset Voltage 0.5mV
- High Gain 150kV/V
- Slew Rate 35V/ μ s
- Output Short Circuit Protection

Applications

- Video and RF Amplifier
- Pulse Amplifier
- Audio Amplifiers and Filters
- High-Q Active Filters
- High Speed Comparators
- Low Distortion Oscillator

Ordering Information

HA9P2625-9 (H26259)	-40 to 85	8 Ld SOIC	M8.15

Description

HA-2620/2622/2625 are bipolar operational amplifiers that feature very high input impedance (500M Ω , HA-2620) coupled with wideband AC performance. The high resistance of the input stage is complemented by low offset voltage (0.5mV, HA-2620) and low bias and offset current (1nA, HA-2620) to facilitate accurate signal processing. Input offset can be reduced further by means of an external nulling potentiometer. The 100MHz gain bandwidth product (HA-2620/2622/2625 are stable for closed loop gains greater than 5), 35V/ μ s slew rate and 150kV/V open loop gain enables HA-2620/2622/2625 to perform high gain amplification of very fast, wideband signals. These dynamic characteristics, coupled with fast settling times, make these amplifiers ideally suited to pulse amplification designs as well as high frequency (e.g., video) applications. The frequency response of the amplifier can be tailored to exact design requirements by means of an external bandwidth control capacitor connected from the Comp pin to GND.

In addition to its application in pulse and video amplifier designs, HA-2620/2622/2625 is particularly suited to other high performance designs such as high-gain low distortion audio amplifiers, high-Q and wideband active filters and high-speed comparators. For more information, please refer to Application Notes AN509, AN519 and AN546.

The HA-2620 and HA-2622 are both offered as /883 Military Grade with the HA-2622 also available in CLCC packages. MIL-STD-883 data sheets are available upon request Harris AnswerFAX (407-724-7800) Document #3701.

Absolute Maximum Ratings

Supply Voltage (Between V+ and V- Terminals) 45V
 Differential Input Voltage 12V
 Peak Output Current Full Short Circuit Protection

Operating Conditions

Temperature Range
 HA-2620/HA-2622-2 -55°C to 125°C
 HA-2625-5 0°C to 75°C
 HA-2625-9 -40°C to 85°C

Thermal Information

Thermal Resistance (Typical, Note 1) θ_{JA} (°C/W) θ_{JC} (°C/W)
 PDIP Package 96 N/A
 CERDIP Package 135 50
 SOIC Package 157 N/A
 Metal Can Package 165 80
 Maximum Junction Temperature (Hermetic Package) 175°C
 Maximum Junction Temperature (Plastic Package) 150°C
 Maximum Storage Temperature Range -65°C to 150°C
 Maximum Lead Temperature (Soldering 10s) 300°C
 (SOIC - Lead Tips Only)

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

- θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

Electrical Specifications $V_{SUPPLY} = \pm 15V$, Unless Otherwise Specified

NOTES:

2. This parameter value guaranteed by design calculations.
3. Offset may be externally adjusted to zero
4. $R_L = 2k\Omega$.
5. $V_{OUT} = \pm 10V$.
6. $V_{CM} = \pm 10V$.
7. $V_{OUT} < 90mV$.
8. 40dB Gain.
9. See Transient Response Test Circuits and Waveforms.
10. $A_V = 5$ (The HA-2620 family is not stable at unity gain without external compensation).
11. $\Delta V_S = \pm 5V$.
12. $V_{OUT} = \pm 5V$.
13. Full Power Bandwidth guaranteed by slew rate measurement: $FPBW = \frac{\text{Slew Rate}}{2\pi V_{PEAK}}$

Test Circuits and Waveforms

TRANSIENT RESPONSE

SLEW RATE

NOTE: Measured on both positive and negative transistions from $0V$ to $+200mV$ and $0V$ to $-200mV$ at output.

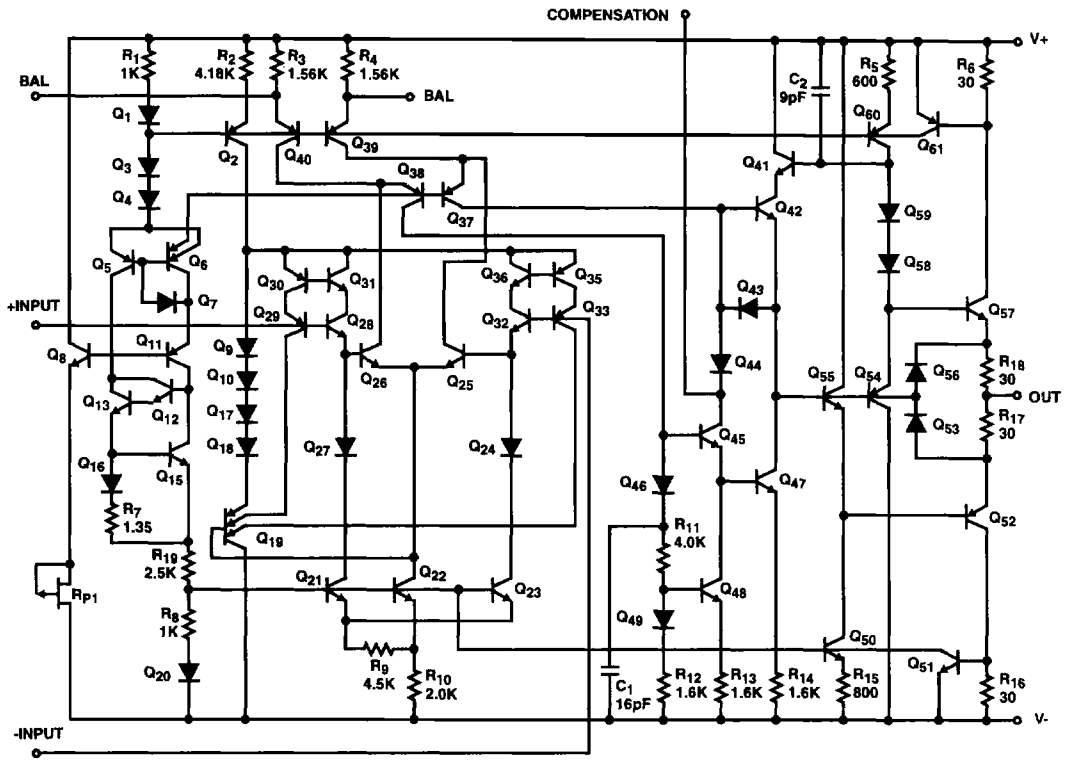

SLEW RATE AND TRANSIENT RESPONSE

NOTE: Tested Offset Adjustment is $|V_{OS} + 1mV|$ minimum referred to output. Typical range is $\pm 10mV$ with $R_T = 100k\Omega$.

SUGGESTED V_{OS} ADJUSTMENT AND COMPENSATION HOOK-UP
