## 50MHz, Fast Settling, Unity Gain Stable, Video Operational Amplifier

The HA-2841 is a wideband, unity gain stable, operational amplifier featuring a 50 MHz unity gain bandwidth, and excellent DC specifications. This amplifier's performance is further enhanced through stable operation down to closed loop gains of +1 , the inclusion of offset null controls, and by its excellent video performance.

The capabilities of the HA-2841 are ideally suited for high speed pulse and video amplifier circuits, where high slew rates and wide bandwidth are required. Gain flatness of 0.05 dB , combined with differential gain and phase specifications of $0.03 \%$, and 0.03 degrees, respectively, make the HA-2841 ideal for component and composite video applications.

A zener/nichrome based reference circuit, coupled with advanced laser trimming techniques, yields a supply current with a low temperature coefficient and low lot-to-lot variability. Tighter I CC control translates to more consistent $A C$ parameters ensuring that units from each lot perform the same way, and easing the task of designing systems for wide temperature ranges. Critical AC parameters, Slew Rate and Bandwidth, each vary by less than $\pm 5 \%$ over the industrial temperature range (see characteristic curves).

For military grade product, refer to the HA-2841/883 data sheet.

## HA-2841 (PDIP, SOIC) <br> TOP VIEW

## Features

- Low Supply Current . . . . . . . . . . . . . . . . . . . . . . . . . 10mA
- Low AC Variability Over Process and Temperature
- Unity Gain Bandwidth. 50 MHz
- Gain Flatness to 10 MHz. . . . . . . . . . . . . . . . . . . . . 0.05dB
- High Slew Rate . . . . . . . . . . . . . . . . . . . . . . . . . . 240V/ $\mu \mathrm{s}$
- Low Offset Voltage. . . . . . . . . . . . . . . . . . . . . . . . . . . 1mV
- Fast Settling Time (0.1\%). . . . . . . . . . . . . . . . . . . . . . 90 ns
- Differential Gain/Phase . . . . . . . . . 0.03\%/0.03 Degrees
- Enhanced Replacement for AD841 and EL2041

## Applications

- Pulse and Video Amplifiers
- Wideband Amplifiers
- High Speed Sample-Hold Circuits
- Fast, Precise D/A Converters
- High Speed A/D Input Buffer

## Part Number Information

| PART NUMBER <br> (BRAND) | TEMP. <br> RANGE $\left({ }^{\circ} \mathbf{C}\right)$ | PACKAGE | PKG. <br> NO. |
| :--- | :---: | :--- | :--- |
| HA3-2841-5 | 0 to 75 | 8 Ld PDIP | E8.3 |
| HA9P2841-5 <br> (H28415) | 0 to 75 | 8 Ld SOIC | M8.15 |

Absolute Maximum Ratings
Voltage Between V+ and V- Terminals . . . . . . . . . . . . . . . . . . 35. 35
Differential Input Voltage . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 6V

## Operating Conditions

Temperature Range
$0^{\circ} \mathrm{C}$ to $75^{\circ} \mathrm{C}$
Recommended Supply Voltage Range $\pm 6.5 \mathrm{~V}$ to $\pm 15 \mathrm{~V}$

## Thermal Information

| Thermal Resistance (Typical, Note 2) | $\theta_{\mathrm{JA}}\left({ }^{\circ} \mathrm{C} / \mathrm{W}\right)$ |
| :---: | :---: |
| 8 Lead PDIP Package | 92 |
| 8 Lead SOIC Package | 157 |
| Maximum Junction Temperature (Die, Note 1) | $.175^{\circ} \mathrm{C}$ |
| Maximum Junction Temperature (Plastic Package) | . $150^{\circ} \mathrm{C}$ |
| Maximum Storage Temperature Range | ${ }^{\circ} \mathrm{C}$ to $150^{\circ} \mathrm{C}$ |
| Maximum Lead Temperature (Soldering 10s). (SOIC - Lead Tips Only) | $300^{\circ} \mathrm{C}$ |

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

## NOTES:

1. Maximum power dissipation, including output load, must be designed to maintain the maximum junction temperature below $150^{\circ} \mathrm{C}$ for plastic packages.
2. $\theta_{\mathrm{JA}}$ is measured with the component mounted on an evaluation PC board in free air.
3. $\mathrm{V}_{\mathrm{O}}= \pm 10 \mathrm{~V}, \mathrm{R}_{\mathrm{L}}$ unconnected. Output duty cycle must be reduced if I OUT $>10 \mathrm{~mA}$.

Electrical Specifications $V_{S U P P L Y}= \pm 15 \mathrm{~V}, R_{L}=1 \mathrm{k} \Omega, C_{L} \leq 10 \mathrm{pF}$, Unless Otherwise Specified

NOTES:
4. Differential gain and phase are measured with a VM700A video tester, using a NTC-7 composite VITS. $R_{F}=R_{1}=1 \mathrm{k} \Omega, R_{L}=700 \Omega$.
5. $A_{V C L}=1000$, Measured at unity gain crossing.
6. Full Power Bandwidth guaranteed based on slew rate measurement using FPBW $=\frac{\text { Slew Rate }}{2 \pi V_{\text {PEAK }}} \quad\left(\mathrm{V}_{\text {PEAK }}=10 \mathrm{~V}\right)$.
7. Refer to Test Circuit section of data sheet.
8. $\mathrm{V}_{\text {SUPPLY }}= \pm 10 \mathrm{~V}$ to $\pm 20 \mathrm{~V}$.
9. This parameter is not tested. The limits are guaranteed based on lab characterization, and reflect lot-to-lot variation.
10. See "Typical Performance Curves" for more information.

## Test Circuits and Waveforms

NOTES:
11. $\mathrm{V}_{\mathrm{S}}= \pm 15 \mathrm{~V}$.
12. $A_{V}=+1$.
13. $C_{L}<10 p F$.

TEST CIRCUIT

LARGE SIGNAL RESPONSE

Input $=100 \mathrm{mV} /$ Div.
Output $=100 \mathrm{mV} /$ Div. 50ns/Div.

SMALL SIGNAL RESPONSE

## Test Circuits and Waveforms (Continued)

14. $A_{V}=-1$.
15. Load Capacitance should be less than 10 pF .
16. Feedback and summing resistors must be matched to $0.1 \%$.
17. Tektronix P6201 FET probe used at settling point.
18. HP5082-2810 clipping diodes recommended.

SETTLING TIME TEST CIRCUIT

## Typical Applications (Also see Application Note AN550)

## Application 1 - High Power Amplifiers and Buffers

High power amplifiers and buffers are in use in a wide variety of applications. Many times the "high power" capability is needed to drive large capacitive loads as well as low value resistive loads. In both cases the final driver stage is usually a power transistor of some type, but because of their inherently low gain, several stages of pre-drivers are often required. The HA-2841, with its 15 mA output rating, is powerful enough to drive a power transistor without additional stages of current amplification. This capability is well demonstrated with the high power buffer circuit in Figure 1.

The HA-2841 acts as the pre-driver to the output power transistor. Together, they form a unity gain buffer with the ability to drive three $50 \Omega$ coaxial cables in parallel, each with a capacitance of 2000 pF . The total combined load is $16.6 \Omega$ and 6000 pF capacitance.

FIGURE 1. DRIVING POWER TRANSISTORS TO GAIN ADDITIONAL CURRENT BOOSTING

## Application 2 - Video

One of the primary uses of the HA-2841 is in the area of video applications. These applications include signal construction, synchronization addition and removal, as well as signal modification. A wide bandwidth device such as the HA-2841 is well suited for use in this class of amplifier. This, however, is a more involved group of applications than
ordinary amplifier applications since video signals contain precise DC levels which must be retained.

The addition of a clamping circuit restores DC levels at the output of an amplifier stage. The circuit shown in Figure 2 utilizes the HA-5320 sample and hold amplifier as the DC clamp. Also shown is a 3.57 MHz trap in series, which will block the color burst portion of the video signal and allow the DC level to be amplified and restored.

FIGURE 2. VIDEO DC RESTORER

## Prototyping Guidelines

For best overall performance in any application, it is recommended that high frequency layout techniques be used. This should include:

1. Mounting the device through a ground plane.
2. Connecting unused pins (NC) to the ground plane.
3. Mounting feedback components on Teflon standoffs and/or locating these components as close to the device as possible.
4. Placing power supply decoupling capacitors from device supply pins to ground.

Typical Performance Curves $T_{A}=25^{\circ} \mathrm{C}, \mathrm{V}_{\text {SUPPLY }}= \pm 15 \mathrm{~V}, \mathrm{R}_{\mathrm{L}}=1 \mathrm{k} \Omega, \mathrm{C}_{\mathrm{L}}<10 \mathrm{pF}$, Unless otherwise Specified
