### Description

Low noise and high performance are key words describing the unity gain stable HA-5102/883. This general purpose dual amplifier offers an array of dynamic specifications including  $1V/\mu s$  slew rate (min),  $A_{VCL} \geq 1$ , and  $8MHz$  bandwidth (typ). Complementing these outstanding parameters is a very low noise specification of  $4.3nV/\sqrt{Hz}$  at  $1kHz$  (typ),  $6nV/\sqrt{Hz}$  (max).

Fabricated using the Harris standard high frequency D.I. process, these operational amplifiers also offer excellent input specifications such as  $2.5mV$  (max) offset voltage and  $75nA$  (max) offset current. Complementing these specifications are  $100dB$  (min) open loop gain and  $60dB$  channel separation (min). Economically, the HA-5102/883 also consumes a very moderate amount of supply power  $180mW$ /package.

This impressive combination of features make this amplifier ideally suited for designs ranging from audio amplifiers and active filters to the most demanding signal conditioning and instrumentation circuits.

**NOTES:**

1. Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.
2. Full Power Bandwidth guarantee based on Slew Rate measurement using  $FPBW = Slew\ Rate / (2\pi V_{PEAK})$ .
3. Quiescent Power Consumption based upon Quiescent Supply Current test maximum. (No load on outputs.)
