Applications Notes

Output Voltage Adjustment

The Trim input permits the user to adjust the output voltage up or down by 10%.

This is accomplished by connecting an external resistor between the Trim pin and either the +Vo pin or the -Vo pin.

To Trim Down

Connecting an external resistor (R_d) between the Trim pin and the +Vo pin decreases the output voltage. The following table can be used to determine the required external resistor value to obtain a percentage output voltage change of $\Delta\%$.

Trim Down (%)	12V	15V	24V	36V	48V
	Rd (kΩ)				
5	82	130	180	330	390
10	9.1	30	20	30	39

To Trim Up

Connecting an external resistor (R_u) between the Trim pin and the -Vo pin increases the output voltage. The following table can be used to determine the required external resistor value to obtain a percentage output voltage change of $\Delta\%$.

Trim Up (%)	12V	15V	24V	36V	48V
	Ru (kΩ)				
5	130	150	249	280	412
10	33	50	47	39	91
