### Description

The IQXT-316-7 uses ASIC technology and is designed to meet the short and medium term stability requirements of packet network synchronisation for Small Cells. The oscillator has low jitter to meet network interface requirements (e.g. 10GE) and low phase noise to meet radio interface requirements of LTE-A (TS 36.104) and WCDMA (TS 25.104) transceivers. The IQXT-316-7 is the ideal choice for Small Cell synchronisation requirements.

# **Output Control**

Tri-State Mode:

Logic '0' (20%Vs max) to pad 6 disables the oscillator output, the output goes to a high impedance state.

Logic '1' (60%Vs min) or no connection to pad 6 enables the

oscillator output.

Note: When disabled the oscillator and compensation circuit

are still active (Current Consumption: 2mA typ)
