Datasheet

Part No:
SDDCP.5900.25.10.A.08

Description:
Stacked SDARS & C-V2X Patch Antenna for OEM Automotive Applications

Features:
High Efficiency/ High Peak Gain
SDARS & C-V2X Stacked patch antenna
Dual Feed Patch Assembly
Through-Hole Mounting Pin Type
Dimensions: 25*25*10mm
RoHS & Reach Compliant

1. Introduction

The SDDCP.5900.25.10.A.08 is a passive embedded ceramic stacked patch antenna with both SDARS and C-V2X capabilities. Using a stacked dual patch assembly for both bands results in the most economical and space-efficient solution for demanding applications requiring both SDARS and C-V2X. The patch assembly is easy to integrate with an overall footprint size of just 25x25mm and sits at 10.15mm in height.

The SDARS patch at 25mm*25mm is designed for use with Satellite Digital Audio Radio Services (SDARS). It features left-hand circular polarization, low in-band axial ratio, and excellent gain characteristics in the 2320 to 2345 MHz band, making it compatible with the most popular satellite radio services available in many new vehicles. It is extremely efficient with up to 80% efficiency at 2332.5MHz.

The C-V2X patch at 12mm*12mm is used as the communications medium of choice for active safety V2V/C-V2X (Vehicle-to-Vehicle and Vehicle-to-Other) or DSRC (Dedicated Short Range Communications) systems. Primarily allocated for vehicle safety applications, C-V2X supports high-speed, low-latency, DSRC, V2V/C-V2X wireless communications. The C-V2X patch also has left hand circular polarization and nearly 70% efficiency at 5900MHz.

A typical use case would include utilizing the stacked patch in shark fin style external automotive roof mounted antennas.

This antenna has been tuned and tested on a 70 x 70 mm ground plane. Custom tuning services can be provided for further optimization to customer-specific device environments. Note that certification of your device and/or the antenna may be required by certain Satellite Radio providers. Further engineering may be needed to meet their requirements. 7. Antenna Integration Guide

7.1 Schematic Symbol and Pin Definition

The circuit symbol for the antenna is shown below. The antenna has 2 pins as indicated below. The SDARS pin represents the lower GNSS frequency bands at 2332.5MHz and the DSRC pin represents the higher GNSS frequency bands at 5900MHz.

Pin	Description
1	SDARS
2	DSRC

7.2 Antenna Integration

The antenna should be placed at the center of the ground plane with a length and width of 70mm. Maintaining a square symmetric ground plane shape and symmetric environment around the antenna is critical to maintaining the excellent axial ratio and phase center performance shown in this datasheet.

9. Packaging

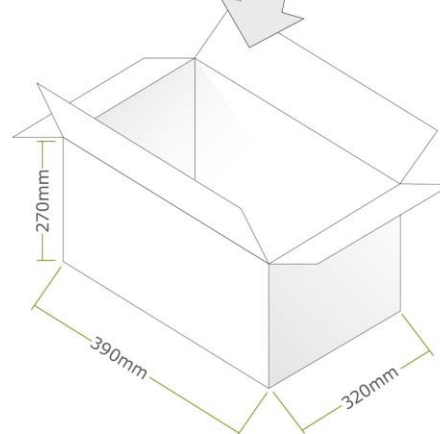

30 pcs SDDCP.5900.25.10.A.08 per Tray
 Tray Dimensions - 300*370*30mm
 Weight - 596g

120 pcs SDDCP.5900.25.10.A.08 per Vacuum Bag
 Vacuum Bag Dimensions - 300*370*50mm
 Weight - 2.4kg

360 pcs GPSDSF.35.7.A.08 per Carton
 Carton Dimensions - 390*320*270mm
 Weight - 10.05kg

Pallet Dimensions:
 1200mm*1000mm*1280mm
 36 Cartons per Pallet
 9 Cartons per Layer, 4 Layers
