### [Self-Alignment Range and Angle During Mating]

Note : This is the self-alignment range until it is guided by the receptacle and the tapered portion of the plug. During mating, a floating mechanism is needed to push the plug vertically using springs.

## Precautions

1. This product cannot be washed.
2. During design, make sure that the product will not be subjected to force from the panel when dropped while mounted to the board.
3. Do not mount with manual solder. There is a risk of solder flux and wicking in the contact areas.
4. When using a heat gun, hot plate, etc., please keep use within 10 seconds at 260°C or less. If usage exceeds the above conditions, the plastic may melt and deform.
5. Refrain from using land patterns or metal mask dimensions other than those specified by Hirose as it may result in solder flux and wicking that may result in product failure.
6. Refrain from using this product in environments of dust, high humidity, gas, extremely high and low temperatures.
7. When using this product as an RF interface for mobile devices, secure a rubber cap to prevent dust from entering when the plug is not mated.
8. Before use make sure the plug is fully inserted to the (P) surface as shown below.
